“C”

Initial Study/Mitigated Negative Declaration & MMRP
1. **Project Title:** Nova Wine Warehouse, Use Permit P16-00456
2. **Property Owner/Project Sponsor Name and Address:** Nova Business Park, LLC (Ron Fedrick); P.O. Box 4050, Napa, CA 94558
3. **Representative Name and Address:** Beth Painter, Balanced Planning; 10 Canopy Lane, Napa, CA 94558
4. **County Contact Person, Phone Number, and Email:** Sean Trippi; (707) 299-1353; sean.trippi@countyofnapa.org
5. **Project Location and APN:** The project is proposed on a 23.2 acre portion of two lots totaling 44.8 on the west side of Devlin Road, adjoining Suscol Creek. APN’s: 057-170-008 & 019. Napa.
6. **General Plan Description:** Industrial
7. **Zoning:** Industrial Park: Airport Compatibility (IP:AC)
8. **Description of Project:** The project proposes to construct a new light industrial building with approximately 400,500 square feet of floor area which includes approximately 391,934 sq. ft. of warehouse space and 8,566 sq. ft. of office space. No tenants have been identified, however the warehouse is intended for wine storage. On-site parking for 241 vehicles, 22 truck/trailer spaces, landscaping, and signage are also included with the proposal. A lot line adjustment is also proposed to create the proposed 23.2 acre development area with a 21.9 acre property to the east resulting from the lot reconfiguration. The project site does not have direct access from or frontage on Devlin Road but will be accessed via a new driveway on Devlin Road within an easement across the 21.9 acre property. Other than the driveway, no development is proposed on the easterly property. A two-way left turn lane on Devlin Road will be constructed along the project frontage. The project will connect to municipal water and sewer services provided by the City of American Canyon and the Napa Sanitation District (NSD), respectively. Annexation to NSD will be required prior to the provision of services.

Exterior building materials include tex-coat concrete tilt-up wall panels with a multi-color paint scheme and multiple score lines/reveals. The north, south and east elevations include glass storefront areas, with parapets raised above the rest of the building with metal canopies above the glass. The east elevation includes 34 depressed loading docks, four at-grade overhead roll-up doors, and eight man-doors. The west elevation includes 46 depressed loading docks, two at-grade overhead roll-up doors and 10 man-doors. The north and south elevations each have four man-doors. The proposed facility would generally operate between 6 A.M. and 6 P.M, five to seven days a week with an estimated 20 full-time and 20 part-time employees.

9. **Describe the environmental setting and surrounding land uses:**
The site is currently vacant, has been previously graded and is located within a partially developed industrial/business park. The site has been designated for industrial development for over 30 years. A portion of the northern boundary of the site adjoins Suscol Creek. The development area is relatively flat with gentle slopes ranging from 0-5 percent from northeast to southwest and includes non-native grasses, a smattering bushes, and a riparian area along Suscol Creek. There is also a gravel walking path traversing the project site which is accessed from an existing industrial facility to the southeast under the same ownership as the proposed project. A small barn and a shed on the easterly property were demolished in 2016, prior to submittal of the use permit application. Adjoining the west side of the project site are two properties totaling approximately 49.8 acres. The northerly property is planted in vines. The southerly property wraps around the southern end of the project site and is undeveloped. To the north across Suscol Creek is a self-storage facility. To the east are two properties; a 1.64 acre property with a single-family home, a 1.0 acre property with a partially developed winery, and the 21.9 acre portion of the project site. Southeast of 21.9 acre portion of the site is a 1.41 acre site with a light industrial/warehouse building, a self-storage facility on a 3.41 acre site, and Nova Group Inc’s., a general engineering contractor, home offices and fabrication facility on a 20.34 site under the same ownership as the project site. The project site is in close proximity to the Napa County Airport, and is located in Zone C, the Extended (runway) Approach/Departure Zone. This is an area where aircraft will be below 300-feet above ground level as determined by the type of approach.

10. **Other agencies whose approval is required** (e.g., permits, financing approval, or participation agreement).
Discretionary approval required by Napa County consists of a use permit. The proposed project would also require various ministerial approvals by the County including, but not limited to building permits, grading permits, encroachment permits, and lot line adjustment. Permits to connect to water and sewer utilities are required from the City of American Canyon and Napa Sanitation District, respectively. A Storm
Water Pollution Prevention Plan (SWPPP) is required to meet San Francisco Regional Water Quality Control Board standards and is administered by the Engineering Services Division. The Local Agency Formation Commission will require annexation to the Napa Sanitation District.

The proposed project does not involve modifications to a streambed, and thus does not require a streambed alteration agreement from the California Department of Fish and Wildlife. The proposed project does not involve the fill of waters of the United States, and thus does not require a dredge-and-fill permit from the U.S. Army Corps of Engineers. The proposed project does not involve the “take” of listed endangered or threatened species, and thus does not require a “take permit” from the Department of Fish and Wildlife, the U.S. Fish and Wildlife Service, or the National Marine Fisheries Service.

Responsible (R) and Trustee (T) Agencies
City of American Canyon
Napa Sanitation District
Local Agency Formation Commission

Other Agencies Contacted
City of Napa

11. Tribal Cultural Resources. Have California Native American tribes traditionally and culturally affiliated with the project area requested consultation pursuant to Public Resources Code section 21080.3.1? If so, has consultation begun?

Pursuant to Public Resources Code section 21080.3.1, invitation for tribal consultation was completed. One response was received from the Middletown Rancheria dated August 31, 2017. The letter indicates that while the Middletown Rancheria has no comments, they would like to be notified should any resources be found.

Note: Conducting consultation early in the CEQA process allows tribal governments, lead agencies, and project proponents to discuss the level of environmental review, identify and address potential adverse impacts to tribal cultural resources, and reduce the potential for delay and conflict in the environmental review process. (See Public Resources Code section 21083.3.2.) Information may also be available from the California Native American Heritage Commission’s Sacred Lands File per Public Resources Code section 5097.96 and the California Historical Resources Information System administered by the California Office of Historic Preservation. Please also note that Public Resources Code section 21082.3(c) contains provisions specific to confidentiality.

ENVIRONMENTAL IMPACTS AND BASIS OF CONCLUSIONS:

The conclusions and recommendations contained herein are professional opinions derived in accordance with current standards of professional practice. They are based on a review of the Napa County Environmental Resource Maps, the other sources of information listed in the file, and the comments received, conversations with knowledgeable individuals; the preparer’s personal knowledge of the area; and, where necessary, a visit to the site. For further information, see the environmental background information contained in the permanent file on this project.

On the basis of this initial evaluation:

☐ I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.
☒ I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.
☐ I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.
☐ I find that the proposed project MAY have a “potentially significant impact” or “potentially significant unless mitigated” impact on the environment, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.
☐ I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

Sean Trippi, Principal Planner
County of Napa Planning, Building and Environmental Services Department

Date 6/11/18
I. **AESTHETICS.** Would the project:

<table>
<thead>
<tr>
<th></th>
<th>Potentially Significant Impact</th>
<th>Less Than Significant With Mitigation Incorporation</th>
<th>Less Than Significant Impact</th>
<th>No Impact</th>
</tr>
</thead>
<tbody>
<tr>
<td>a)</td>
<td>Have a substantial adverse effect on a scenic vista?</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>b)</td>
<td>Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>c)</td>
<td>Substantially degrade the existing visual character or quality of the site and its surroundings?</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>d)</td>
<td>Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Discussion:

a/b. The proposed project would not be located within an area which would damage any known scenic vista, or damage scenic resources, trees, rock outcroppings, or historic buildings. The proposed project site has been previously graded, contains little to no vegetation in the proposed development area and is currently vacant.

c. The proposed project is located within a partially developed portion of the Napa Valley Business Park Specific Plan (NVBSP) area that allows a mix of industrial developments. The building is located approximately 800 feet west of Devlin Road, south of Suscol Creek. The building elevations include tex-coat concrete tilt-up wall panels with a multi-color paint scheme and multiple score lines/reveals. The north, south and east elevations include glass storefront areas, with parapets raised above the rest of the building with metal canopies above the glass. The overall design is equivalent to other similar more recent industrial projects approved and/or constructed within the NVBSP boundaries, and meets the minimum design requirements for the NVBSP industrial park area. Therefore, the project will not substantially degrade the existing visual character or quality of the site and surrounding area.

d. The new facility will result in a minor increase in the nighttime lighting. In accordance with County standards, all exterior lighting will be the minimum necessary for operational and security needs. Light fixtures will be kept as low to the ground as possible and include shields to deflect the light downward. Avoidance of highly reflective surfaces will be required, as well as standard County conditions to prevent light from being cast skyward. This is an area routinely overflown by low flying aircraft which necessitates strong controls on skyward nighttime lighting. As designed, and as subject to standard conditions of approval, the project will not create a significant impact from light or glare. As designed, and as subject to the standard condition of approval, below, the project will not have a significant impact resulting from new sources of outside lighting.

4.9 **GENERAL PROPERTY MAINTENANCE – LIGHTING, LANDSCAPING, PAINTING, OUTDOOR EQUIPMENT STORAGE, MECHANICAL EQUIPMENT, AND TRASH ENCLOSURE AREAS**

a. All lighting shall be permanently maintained in accordance with the lighting and building plans approved by the County.

6.3 **LIGHTING – PLAN SUBMITTAL**

a. Two (2) copies of a detailed lighting plan showing the location and specifications for all lighting fixtures to be installed on the property shall be submitted for Planning Division review and approval. All lighting shall comply with the CBC.

b. All exterior lighting, including landscape lighting, shall be shielded and directed downward; located as low to the ground as possible; the minimum necessary for security, safety, or operations; on timers; and shall incorporate the use of motion detection sensors to the greatest extent practical. All lighting shall be shielded or placed such that it does not shine directly on adjacent properties or impact vehicles on adjacent streets. No flood-lighting or sodium lighting of the building is permitted, including architectural highlighting and spotting. Low-level lighting shall be utilized in parking areas as opposed to elevated high-intensity light standards.

**Mitigation Measures:** None required.
II. AGRICULTURE AND FOREST RESOURCES. 1 Would the project:

a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Important (Farmland) as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use? ☐ ☐ ☐ ☒

b) Conflict with existing zoning for agricultural use, or a Williamson Act contract? ☐ ☐ ☐ ☒

c) Conflict with existing zoning for, or cause rezoning of, forest land as defined in Public Resources Code Section 12220(g), timberland as defined in Public Resources Code Section 4526, or timberland zoned Timberland Production as defined in Government Code Section 51104(g)? ☐ ☐ ☐ ☒

d) Result in the loss of forest land or conversion of forest land to non-forest use in a manner that will significantly affect timber, aesthetics, fish and wildlife, biodiversity, water quality, recreation, or other public benefits? ☐ ☐ ☐ ☒

e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland to non-agricultural use? ☐ ☐ ☐ ☒

Discussion:

a/b. The project site is located within a developing industrial park. The project would not result in the conversion of Prime Farmland, Unique Farmland, or Farmland of Statewide Important as shown on the Napa County GIS map (Department of Conservation Farmlands 2012 Napa County Farmlands layer). According to Napa County GIS the property is categorized as Farmland of Local Importance (L). Although the site, as well as other undeveloped land in the NVBPSP area, is classified as locally important, the site has been designated for industrial park uses for the last 30 years. Undeveloped lands within the boundary of the NVBPSP are designated as Farmland of Local Importance because they include areas of soils that meet all the characteristics of Prime Farmland or of additional Farmland of Statewide Importance with the exception of irrigation. As development in the NVBPSP area continues, the surrounding developed parcels have been reclassified as Urban and Built-up Land (D). The project site is not subject to a Williamson Act contract.

c/d. The project site is zoned Industrial Park (IP), which allows light industrial, manufacturing, office and business park uses upon grant of a use permit, and is located within the Napa Valley Business Park Specific Plan. According to the Napa County Environmental Resource Maps (based on the following layers – Sensitive Biotic Oak woodlands, Riparian Woodland forest, and Coniferous forest) the project site does not contain woodland or forested areas. Therefore, the proposed project would not conflict with existing zoning for, or cause rezoning of, forest land, timberland, or timberland zoned Timberland Production.

e. The project site is surrounded by developing industrial park land. Although farming activities occurred on these lands in the past, the area has been designated for industrial development for over 30 years. The project will not result in the conversion of existing farmland.

Mitigation Measures: None required.

---

1 "Forest land" is defined by the State as "land that can support 10-percent native tree cover of any species, including hardwoods, under natural conditions, and that allows for management of one or more forest resources, including timber, aesthetics, fish and wildlife, biodiversity, water quality, recreation, and other public benefits." (Public Resources Code Section 12220(g)) The Napa County General Plan anticipates and does not preclude conversion of some "forest land" to agricultural use, and the program-level EIR for the 2008 General Plan Update analyzed the impacts of up to 12,500 acres of vineyard development between 2005 and 2030, with the assumption that some of this development would occur on "forest land." In that analysis specifically, and in the County’s view generally, the conversion of forest land to agricultural use would constitute a potentially significant impact only if there were resulting significant impacts to sensitive species, biodiversity, wildlife movement, sensitive biotic communities listed by the California Department of Fish and Wildlife, water quality, or other environmental resources addressed in this checklist.
III. **AIR QUALITY.** Where available, the significance criteria established by the applicable air quality management or air pollution control district may be relied upon to make the following determinations. Would the project:

a) Conflict with or obstruct implementation of the applicable air quality plan?
   - Potentially Significant Impact
   - Less Than Significant With Mitigation Incorporation
   - Less Than Significant Impact
   - No Impact

b) Violate any air quality standard or contribute substantially to an existing or projected air quality violation?
   - Potentially Significant Impact
   - Less Than Significant With Mitigation Incorporation
   - Less Than Significant Impact
   - No Impact

c) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors)?
   - Potentially Significant Impact
   - Less Than Significant With Mitigation Incorporation
   - Less Than Significant Impact
   - No Impact

d) Expose sensitive receptors to substantial pollutant concentrations?
   - Potentially Significant Impact
   - Less Than Significant With Mitigation Incorporation
   - Less Than Significant Impact
   - No Impact

e) Create objectionable odors affecting a substantial number of people?
   - Potentially Significant Impact
   - Less Than Significant With Mitigation Incorporation
   - Less Than Significant Impact
   - No Impact

Discussion:

On June 2, 2010, the Bay Area Air Quality Management District’s (BAAQMD) Board of Directors unanimously adopted thresholds of significance to assist in the review of projects under the California Environmental Quality Act. These Thresholds are designed to establish the level at which BAAQMD believed air pollution emissions would cause significant environmental impacts under CEQA and were posted on BAAQMD’s website and included in BAAQMD’s updated CEQA Guidelines (updated May 2012). The Thresholds are advisory and may be followed by local agencies at their own discretion.

The Thresholds were challenged in court. Following litigation in the trial court, the court of appeal, and the California Supreme Court, all of the Thresholds were upheld. However, in an opinion issued on December 17, 2015, the California Supreme Court held that CEQA does not generally require an analysis of the impacts of locating development in areas subject to environmental hazards unless the project would exacerbate existing environmental hazards. The Supreme Court also found that CEQA requires the analysis of exposing people to environmental hazards in specific circumstances, including the location of development near airports, schools near sources of toxic contamination, and certain exemptions for infill and workforce housing. The Supreme Court also held that public agencies remain free to conduct this analysis regardless of whether it is required by CEQA.

In view of the Supreme Court’s opinion, local agencies may rely on thresholds designed to reflect the impact of locating development near areas of toxic air contamination where such an analysis is required by CEQA or where the agency has determined that such an analysis would assist in making a decision about the project. However, the thresholds are not mandatory and agencies should apply them only after determining that they reflect an appropriate measure of a project’s impacts. These Guidelines may inform environmental review for development projects in the Bay Area, but do not commit local governments or BAAQMD to any specific course of regulatory action.

BAAQMD published a new version of the Guidelines dated May 2017, which includes revisions made to address the Supreme Court’s opinion. The May 2017 Guidelines update does not address outdated references, links, analytical methodologies or other technical information that may be in the Guidelines or Thresholds Justification Report. The Air District is currently working to revise any outdated information in the Guidelines as part of its update to the CEQA Guidelines and thresholds of significance.

a-c. The mountains bordering Napa Valley block much of the prevailing northwesterly winds throughout the year. Sunshine is plentiful in Napa County, and summertime can be very warm in the valley, particularly in the northern end. Winters are usually mild, with cool temperatures overnight and mild-to-moderate temperatures during the day. Wintertime temperatures tend to be slightly cooler in the northern end of the valley. Winds are generally calm throughout the county. Annual precipitation averages range from about 24 inches in low elevations to more than 40 inches in the mountains.

Ozone and fine particle pollution, or PM2.5, are the major regional air pollutants of concern in the San Francisco Bay Area. Ozone is primarily a problem in the summer, and fine particle pollution in the winter. In Napa County, ozone rarely exceeds health standards, but PM2.5 occasionally does reach unhealthy concentrations. There are multiple reasons for PM2.5 exceedances in Napa County. First, much of the county is wind-sheltered, which tends to trap PM2.5 within the Napa Valley. Second, much of the area is well north of the moderating temperatures of San Pablo Bay and, as a result, Napa County experiences some of the coldest nights in the Bay Area. This leads to greater fireplace use and, in turn, higher PM2.5 levels. Finally, in the winter easterly winds often move fine-particle-laden air from the Central Valley to the Carquinez Strait and then into western Solano and southern Napa County (BAAQMD, *In Your Community: Napa County*, April 2016).
The impacts associated with implementation of the Project were evaluated consistent with guidance provided by BAAQMD. Ambient air quality standards have been established by state and federal environmental agencies for specific air pollutants most pervasive in urban environments. These pollutants are referred to as criteria air pollutants because the standards established for them were developed to meet specific health and welfare criteria set forth in the enabling legislation. The criteria air pollutants emitted by development, traffic and other activities anticipated under the proposed development include ozone, ozone precursors oxides of nitrogen and reactive organic gases (NOx and ROG), carbon monoxide (CO), nitrogen dioxide (NO2), and suspended particulate matter (PM10 and PM2.5). Other criteria pollutants, such as lead and sulfur dioxide (SO2), would not be substantially emitted by the proposed development or traffic, and air quality standards for them are being met throughout the Bay Area.

BAAQMD has not officially recommended the use of its thresholds in CEQA analyses and CEQA ultimately allows lead agencies the discretion to determine whether a particular environmental impact would be considered significant, as evidenced by scientific or other factual data. BAAQMD also states that lead agencies need to determine appropriate air quality thresholds to use for each project they review based on substantial evidence that they include in the administrative record of the CEQA document. One resource BAAQMD provides as a reference for determining appropriate thresholds is the California Environmental Quality Act Air Quality Guidelines developed by its staff in 2010 and as updated through May 2017. These guidelines outline substantial evidence supporting a variety of thresholds of significance.

As mentioned above, in 2010, the BAAQMD adopted and later incorporated into its 2011 CEQA Guidelines project screening criteria (Table 3-1 – Operational-Related Criteria Air Pollutant and Precursors Screening Level Sizes) and thresholds of significance for air pollutants, which have now been updated by BAAQMD through May 2017. The proposed facility is approximately 400,500 square feet of floor area including approximately 8,566 square feet of office area. When compared to the BAAQMD’s operational criteria pollutant screening size of 541,00 square feet and 864,000 square feet for light industrial and warehousing, respectively, the project would not significantly impact air quality and does not require further study (BAAQMD CEQA Guidelines, May 2017 Pages 3-2 & 3-3.). Given the size of the project compared to the BAAQMD’s screening criterion of 864,000 square feet (warehousing) and 346,000 square feet (general office) for NOx (oxides of nitrogen), the project would contribute an insignificant amount of air pollution and would not result in a conflict or obstruction of an air quality plan.

The project falls well below the screening criteria as noted above, and consequently will not significantly affect air quality individually or contribute considerably to any cumulative air quality impacts.

d. In the short term, potential air quality impacts are most likely to result from earthmoving and construction activities required for project construction. Earthmoving and construction emissions would have a temporary effect; consisting mainly of dust generated during grading and other construction activities, exhaust emissions from construction related equipment and vehicles, and relatively minor emissions from paints and other architectural coatings. The proposed grading plan has been designed to balance cut and fill resulting no off or on-haul of soils. If grading were to result in off or on-haul of soils, these potential construction impacts would be temporary in nature and subject to standard conditions of approval from the Engineering Division as part of the grading permit or building permit review process.

The Air District recommends incorporating feasible control measures as a means of addressing construction impacts. If the proposed project adheres to these relevant best management practices identified by the Air District and the County’s standard conditions of project approval, construction-related impacts will not expose sensitive receptors to substantial pollutant concentrations and are considered less than significant:

7.1 SITE IMPROVEMENT

c. AIR QUALITY

During all construction activities the permittee shall comply with the most current version of BAAQMD Basic Construction Best Management Practices including but not limited to the following, as applicable:

1. Post a publicly visible sign with the telephone number and person to contact at the lead agency regarding dust complaints. The BAAQMD’s phone number shall also be visible.

2. Water all exposed surfaces (e.g., parking areas, staging areas, soil piles, grading areas, and unpaved access roads) two times per day.

3. Cover all haul trucks transporting soil, sand, or other loose material off-site.

4. Remove all visible mud or dirt tracked onto adjacent public roads by using wet power vacuum street sweepers at least once per day. The use of dry power sweeping is prohibited.

5. All vehicle speeds on unpaved roads shall be limited to 15 mph.

6. All roadways, driveways, and sidewalks to be paved shall be completed as soon as possible. Building pads shall be laid as soon as possible after grading unless seeding or soil binders are used.
7. Idling times shall be minimized either by shutting off equipment when not in use or reducing the maximum idling time to five (5) minutes (as required State Regulations). Clear signage shall be provided for construction workers at all access points.

All construction equipment shall be maintained and properly tuned in accordance with manufacturer’s specifications. All equipment shall be checked by a certified visible emissions evaluator. Any portable engines greater than 50 horsepower or associated equipment operated within the BAAQMD’s jurisdiction shall have either a California Air Resources Board (ARB) registration Portable Equipment Registration Program (PERP) or a BAAQMD permit. For general information regarding the certified visible emissions evaluator or the registration program, visit the ARB FAQ http://www.arb.ca.gov/portable/perp/perpfaq_04-16-15.pdf or the PERP website http://www.arb.ca.gov/portable/portal.htm

Furthermore, while earthmoving and construction on the site will generate dust particulates in the short-term, the impact would be less than significant with dust control measures as specified in Napa County’s standard condition of approval relating to dust:

7.1. SITE IMPROVEMENT
b. DUST CONTROL
Water and/or dust palliatives shall be applied in sufficient quantities during grading and other ground disturbing activities on-site to minimize the amount of dust produced. Outdoor construction activities shall not occur when average wind speeds exceed 20 mph.

e. While the Air District defines public exposure to offensive odors as a potentially significant impact, light industrial or manufacturing uses are not known operational producers of pollutants capable of causing substantial negative impacts to sensitive receptors. Construction-phase pollutants will be reduced to a less than significant level by the above-noted standard condition of approval. The project will not create pollutant concentrations or objectionable odors affecting a substantial number of people.

Mitigation Measures: None required.

</table>
Discussion:

The site has been designated for industrial development for over 30 years. The development area is vacant and has been graded over the years for weed abatement. The northern boundary of the development area adjoins Suscol Creek. The development area is relatively flat with gentle slopes ranging from 0-5 percent from northeast to southwest and includes non-native grasses, a smattering of bushes, and a moderately dense riparian woodland area along Suscol Creek. No improvements or construction activity is proposed within the riparian area along Suscol Creek or within bed or bank. The nearest portion of the development area is proposed a minimum of 150-feet south of the top of bank along Suscol Creek. There is a gravel walking path traversing the project site which is accessed from an existing industrial facility under the same ownership as the proposed project southeast of the site. A lot line adjustment is proposed to create the proposed 23.2 acre project site with a resulting 21.9 acre property to the east. The project site does not have direct access from or frontage on Devlin Road but will be accessed via a new driveway on Devlin Road within an easement across the 21.9 acre property. Other than the driveway, no development is proposed on the easterly property. Two Eucalyptus trees as well as some small (less than 5-inch diameter trunk size) Oak trees will be removed to facilitate construction of the on-site driveway. A small barn and a shed on the easterly property were demolished in 2016, prior to submittal of the use permit application. There is existing development adjoining the property to the west, southwest and southeast. Industrial development has been progressing in the general vicinity since the late 1980’s.

A Biological Evaluation of the subject property, dated June 2016, was prepared by Zentner and Zentner, including botanical surveys. The analysis identifies special status species, habitats and other biological resources within the project site as well as potential project impacts, if any, to biological resources and recommended mitigation measures as needed. Site surveys were conducted on April 26, May 6, May 17, and June 2, 2016. A follow-up site visit was conducted on July 5, 2016, during the blooming period of the pappose tarplant. According to the evaluation, the site consists primarily of ruderal or disturbed grasslands, with scattered coyote bush in the northern portion of the development area. The ruderal habitat such as that on the site provides difficult foraging habitat for wildlife species as the dominant ruderal vegetation is tall and dense. Foraging likely takes place in adjacent areas where vegetation is primarily shorter grassland with much fewer ruderal species where hunting would be easier. No wetland areas were identified on the project site.

As noted above, the dominant vegetation on the site is ruderal grassland with the majority being Italian thistle, mustard, and radish in the overstory and red-stem filaree and cut-leaved geranium in the understory. Ripgut brome, wild oats, and Italian ryegrass are also prominent in portions of the ruderal grassland. According to CNPS Inventory, USFWS database, and CDFW’s California Natural Diversity database (CNDDB), a total of 27 special status wildlife and 29 plant species are within the nine USGS 7.5 minute Quadrangles surrounding the project area, with 23 wildlife and 19 plants species within a five mile radius of the project site. A complete list and description of all special status wildlife and plant species that may occur within the project’s region is provided in the Zentner and Zentner report in Tables 1 and 2, respectively. Appendices A and B list plant and wildlife species, respectively, observed during the site visits.

No special-status plant species were observed during the field surveys by Zentner and Zentner. The majority of the plant species occurring within the region are highly unlikely to occur on the project site because the site is not within their range, the site lacks suitable habitat or local occurrences, or they were not observed on the project site. Although no special-status plant species were observed during the field surveys, the Pappose tarplant and Lessingia, both annual herbs, were mentioned as having some likelihood to occur on-site. The original report includes mitigation measures to address potential impacts to Pappose tarplant because the site survey was conducted outside the blooming period. However, a subsequent survey conducted during the appropriate blooming determined that the Pappose tarplant was not present on the project site. Therefore, the recommended mitigation measure is no longer applicable. Additionally, Lessinga was not found during the survey conducted within its blooming period.

No special-status animal species were observed on the site or within the project’s vicinity during the field surveys except for a Swainson’s hawk spotted flying over the riparian woodland area adjacent to the site. As is the case with the potential occurrence of special status plants, the majority of the special-status animal species occurring within the region are highly unlikely to occur on the project site because the site is not within their range, the site lacks suitable habitat or local occurrences, or they were not observed on the project site. The report notes that although not seen on the site, several species have at least some potential to occur on the site. Of these species, the Golden Eagle, Burrowing Owl, American Badger, and Western Bumblebee were determined to be unlikely to occur on the site for the reasons enumerated previously. Four additional species were discussed in the report as having at least some potential to nest or move through the project area. These species are the California red-legged frog (CRLF), Pallid Bat, Northern harrier and Swainson’s hawk. As noted in the report, there are no known occurrences of (CRLF) on the project site or within Suscol Creek. However, the project biologist recommends a pre-construction survey to ensure that there are no CRLF in the project vicinity when work commences in the unlikely event that a stray CRLF moves along the creek corridor. Mitigation measure BIO-1, below, will reduce potential impacts to the CRLF to a level of less than significant. The CNDDB lists seven records of pallid bats within five miles of the project site but has no records of the species on the site, nor have any been observed during the site surveys referenced above. The report indicated that the old barn and shed east of the development area provide potential roosting, although no observations or indications of use were made during the site surveys. The report includes mitigation measures to address potential impacts to Pallid bats, however, both structures were removed after the study was prepared and prior to submittal of the use permit application. Therefore, the recommended mitigation measures are no longer applicable. As with the two preceding species, no Northern harriers have been observed within the vicinity of the project site or observed during the site surveys. However, the project biologist recommends that a pre-construction survey be conducted to determine the presence or absence of the species due to potential nesting.
habitat, primarily within the riparian woodlands along Suscol Creek. The pre-construction survey would also address other nesting raptors and migratory birds. Mitigation measure BIO-2, below, will reduce impacts to any special-status raptor species, including migratory birds protected under the Migratory Bird Treaty Act to a level of less than significant.

According to the CNDDP, there have been five observations of Swainson’s hawk nests within a five-mile radius of the project site, which have been intermittently active from 2005-2012 (see Figure 4 of the June 2016 Zentner and Zentner report). The nest nearest to the site is approximately ¼-mile of the project site. This nest was reported to have last been active in 2012. As noted in the report, a single Swainson’s hawk was observed flying over the riparian woodlands along Suscol Creek and over the fields to the west and northwest of the site during the June site survey. The report also references the Caltrans SR 29/221 Draft EIR (2015) which covered most of the project site including the riparian corridor along Suscol Creek and noted that there were no known active nests within 600 feet of the project area. Further, because the site is primarily composed of relatively dense, ruderal grassland, the quality of the foraging habitat is only of moderate value and would be considered secondary foraging habitat. In comparison, the spray fields to the southwest of the site contain shorter, irrigated pasture that Swainson’s hawks prefer due to the increased presence of rodents and would be considered primary foraging habitat. Though this habitat is considered secondary foraging habitat for Swainson’s hawk, and based on recent observations conducted for similar projects in the area, there are no known, currently active nests in the area. In addition, the Caltrans SR 29/221 Draft EIR noted that the loss of 22.71 acres of grassland vegetation “would not make a considerable contribution to the loss of nesting and/or foraging habitat for the Swainson’s hawk” (Caltrans 2015). Grasslands are considered one of the primary foraging habitats for Swainson’s hawk. The proposed project would impact less area (16.87 acres) and the impacts would also be to secondary habitat (ruderal grassland) rather than primary (spray fields, alfalfa fields etc...), and therefore, the impacts would be even less significant than those evaluated for the Caltrans project. Therefore, given the quality of the ruderal habitat, which would not make a significant contribution to the loss of foraging habitat for the Swainson’s hawk, the loss of 16.87 acres of ruderal habitat is not a significant impact. To ensure no adverse impacts occur to protected raptors as well as other bird species, Mitigation Measure BIO 2 requires a pre-construction survey if construction is anticipated during the nesting/breeding season.

e. The project would not conflict with any local policies protecting biological resources, such as tree preservation or the County’s Conservation Regulations. The site is an improved industrial lot with little native vegetation. In accordance with the requirements of the NVBPS, new landscaping will be provided on the site. The project does not conflict with any County ordinance or requirement to preserve existing trees, and therefore is considered not having potential for a significant impact thereto.

f. The proposed project would not conflict with the provisions of adopted Habitat Conservation Plans, Natural Community Conservation Plans or other approved local, regional or state habitat conservation plans. There are no plans applicable to the subject parcel.

Mitigation Measure(s):

BIO 1: Within 48 hours prior to the commencement of construction activities, a qualified biologist shall conduct a preconstruction CRLF survey to ensure that no CRLF are located on or in proximity to the site. If CRLF are found, the CDFW and USFW will be contacted to determine appropriate mitigation measures and the work shall be halted until the consultations are completed.

Method of Mitigation Monitoring: The permittee shall have a CRLF survey completed prior to any construction activities scheduled to occur on the site. The survey results shall be provided to the Napa County Planning, Building and Environmental Services. In the event CRLF are found to occur on-site consultation will be sought with CDFW to develop appropriate measures to reduce potential impacts CRLF.

BIO-2: If construction would commence anytime during the nesting/breeding season of the Swainson’s hawk, northern harrier or other raptors, or other bird species listed in the Migratory Bird Treaty Act (typically February 1 through September 30), a preconstruction survey of the project vicinity for nesting birds shall be conducted. This survey shall be conducted by a qualified biologist (experienced with the nesting behavior of bird species of the region) within 14 days prior to the commencement of construction activities that would occur during the nesting/breeding season. The intent of the survey should be to determine if active nests are present within or adjacent to the construction zone within approximately 250 feet (300 feet for raptors). The survey shall also be conducted in accordance with the protocol of the Swainson’s Hawk Technical Advisory Committee’s (TAC) Recommended Timing and Methodology for Swainson’s Hawk Nesting Surveys in California’s Central Valley. The survey shall commence early in the Swainson’s hawk nesting season (late March to early April) and surveys will be conducted within a minimum 0.25-mile radius of the Project area. The surveys shall be timed such that the last survey is concluded no more than two weeks prior to initiation of construction. If ground disturbance activities are delayed following a survey, then an additional pre-construction survey should be conducted such that no more than two weeks will have elapsed between the last survey and the commencement of ground disturbance activities. If active nests are found in areas that could be directly or indirectly affected by the project, a no-disturbance buffer zone shall be created around active nests during the breeding season or until a qualified biologist determines that all young have fledged. If any active Swainson’s hawk nests are found during the survey, CDFW recommends a disturbance buffer of at least a 0.25 mile to avoid a “take” or adverse impacts to Swainson’s hawk. No trees or vegetation shall be removed from the project site during the breeding period. The size of the buffer zones and types of construction activities restricted within them should be determined through consultation with the CDFW depending on the species, taking into account factors such as the following:
- Noise and human disturbance levels at the construction site at the time of the survey and the noise and disturbance expected during the construction activity;
- Distance and amount of vegetation or other screening between the construction site and the nest; and
- Sensitivity of individual nesting species and behaviors of the nesting birds.

The buffer zone around an active nest should be established in the field with orange construction fencing or another appropriate barrier and construction personnel should be instructed on the sensitivity of nest areas. The qualified biologist should serve as a construction monitor during those periods when construction activities would occur near active nest areas of special status bird species to ensure that no impacts on these nests occur.

**Method of Mitigation Monitoring:** The permittee shall have a nesting bird survey completed prior to any construction activities scheduled to occur on the site from February 1 through September 30. The survey shall also be conducted in accordance with the protocol of the Swainson’s Hawk Technical Advisory Committee’s (TAC) Recommended Timing and Methodology for Swainson’s Hawk Nesting Surveys in California’s Central Valley. The survey results shall be provided to the Napa County Planning, Building and Environmental Services. In the event any special-status or other protected nesting birds are found to occur on-site construction activities will be scheduled to avoid nesting and breeding periods and consultation will be sought with CDFW to develop appropriate measures to reduce potential impacts to nesting Swainson’s hawk which may include preservation of potential foraging habitat.

<tr>
<td>d) Disturb any human remains, including those interred outside of dedicated cemeteries?</td>
<td>⬜</td>
<td>❌</td>
<td>❌</td>
</tr>
</tbody>
</table>

**Discussion:**

a/b. The project site is vacant and does not contain any structures within the development area. A small barn and a shed on the easterly property were demolished in 2016, prior to submittal of the use permit application. Two Archaeological Resources Studies were prepared by Tom Origer and Associates, dated September 2, 2016 and November 22, 2016. The studies were conducted to determine the presence or absence of archaeological resources, and potential impacts, if any, as a result of the proposed project. According to the initial study, a portion of the site is within a previously recorded resource, although no surface evidence of the resources. The second study was conducted to determine what, if any, impacts the project may have on recorded archaeological resources through subsurface excavations. The report concluded that no further study is recommended for the small part of the resource area affected by the project. However, if any previously undiscovered resources are found during grading of the project, construction of the project is required to cease, and a qualified archaeologist will be retained to investigate the site in accordance with the following standard condition of approval that will be imposed on the project:

**7.2 ARCHEOLOGICAL FINDING**

In the event that archeological artifacts or human remains are discovered during construction, work shall cease in a 50-foot radius surrounding the area of discovery. The permittee shall contact the PBES Department for further guidance, which will likely include the requirement for the permittee to hire a qualified professional to analyze the artifacts encountered and to determine if additional measures are required.

If human remains are encountered during project development, all work in the vicinity must be halted, and the Napa County Coroner informed, so that the Coroner can determine if an investigation of the cause of death is required, and if the remains are of Native American origin. If the remains are of Native American origin, the permittee shall comply with the requirements of Public Resources Code Section 5097.98.
c. No paleontological resources or unique geological features have been identified on the property or were encountered on the property when the site was originally graded for development. However, if resources are found during any earth disturbing activities associated with the project, construction of the project is required to cease, and a qualified archaeologist will be retained to investigate the site in accordance with the standard condition of approval stated above.

d. The Origer reports did not note the discovery of human remains as a result of site surveys. However, the report did note the discovery of human remains in the general area in the past. Origer recommends that construction personnel attend a brief workshop regarding the types of materials and features that may be encountered during construction and the procedure to follow if resources are discovered. This recommendation is included in mitigation measure CULT-1, below. As noted in the above standard condition of approval, if human remains are found during grading of the project, construction of the project is required to cease, and a qualified archaeologist will be retained to investigate the site in accordance with standard condition of approval noted above.

Mitigation Measure(s):

CULT-1: Construction personnel attend a brief workshop conducted by a qualified archaeologist regarding the types of materials and features that may be encountered during construction and the procedure to follow if resources are discovered.

Method of Mitigation Monitoring: The permittee provide documentation to the satisfaction of the Director that the workshop has been conducted prior to any earth disturbing activities.

</table>

Discussion:

a. i.) There are no known faults on the project site as shown on the most recent Alquist-Priolo Earthquake Fault Zoning Map. As such, the proposed facility would result in a less than significant impact with regards to the rupturing of a known fault.
ii.) All areas of the Bay Area are subject to strong seismic ground shaking. Construction of the facility will be required to comply with all the latest building standards and codes, including the California Building Code that would reduce any potential impacts to the maximum extent possible.

iii.) No subsurface conditions have been identified on the project site that indicated a susceptibility to seismic-related ground failure or liquefaction. Compliance with the latest edition of the California Building Code for seismic stability would reduce any impacts to a less than significant level.

iv.) The Napa County Environmental Resource Maps (Landslides line, polygon, and geology layers) did not indicate the presence of landslides on the property.

b. Based upon the Soil Survey of Napa County, prepared by the United States Department of Agriculture (USDA), the site is comprised of Coombs gravelly loam soils, generally on land with slopes between 2 to 5 percent which are characterized by slow runoff with a slight hazard of erosion. This nearly level soil type is found mainly on old terraces and old alluvial fans. Project approval will require incorporation of best management practices and will be subject to the Napa County Stormwater Ordinance which addresses sediment and erosion control measures and dust control, as applicable, to ensure that development does not impact adjoining properties, drainages, and roadways.

c/d. Early or mid-Pleistocene fan or terrace deposits underlay the site according to the Napa County Environmental Resource Maps (Surficial Deposits layer). Based on the Napa County Environmental Sensitivity Maps (Liquefaction layer) the project site has very low susceptibility for liquefaction. Development will be required to comply with all the latest building standards and codes, including the California Building Code that would reduce any potential impacts to a less than significant level. In addition, a soils report, prepared by a qualified Engineer will be required as part of the building permit submittal. The report will address the soil stability, potential for liquefaction and will be used to design specific foundation systems and grading methods which will reduce potential impacts to less than significant.

e. The project will connect to municipal water service provided by the City of American Canyon and sewer service by Napa Sanitation District. “Will Serve” letters have been provided by the affected jurisdictions indicating that they have sufficient capacity to accommodate the water and wastewater demand of this project. (see Section XVII Utilities and Service Systems (d), below.)

Mitigation Measures: None required.

VII. GREENHOUSE GAS EMISSIONS. Would the project:

a) Generate a net increase in greenhouse gas emissions in excess of applicable thresholds adopted by the Bay Area Air Quality Management District or the California Air Resources Board which may have a significant impact on the environment?

   ☐ ☐ ☒ ☐

b) Conflict with a county-adopted climate action plan or another applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?

   ☐ ☐ ☒ ☐

Discussion:

Napa County has been working to develop a Climate Action Plan (CAP) for several years. In 2012 a Draft CAP2 (March 2012) was recommended using the emissions checklist in the Draft CAP, on a trial basis, to determine potential greenhouse gas (GHG) emissions associated with project development and operation. At the December 11, 2012, Napa County Board of Supervisors (BOS) hearing, the BOS considered adoption of the proposed CAP. In addition to reducing Napa County’s GHG emissions, the proposed plan was intended to address compliance with CEQA for projects reviewed by the County and to lay the foundation for development of a local offset program. While the BOS acknowledged the plan’s objectives, the BOS suggested that the CAP be revised to better address transportation-related greenhouse gas, to acknowledge and credit past accomplishments and voluntary efforts, and to allow more time for establishment of a cost-effective local offset program. The Board also requested that best management practices be applied and considered when reviewing projects until a revised CAP is adopted to ensure that projects address the County’s policy goal related to reducing GHG emissions.

In July 2015, the County re-commenced preparation of the CAP to: i) account for present day conditions and modeling assumptions (such as but not limited to methods, emission factors, and data sources), ii) address the concerns with the previous CAP effort as outlined above, iii) meet applicable State requirements, and iv) result in a functional and legally defensible CAP. On April 13, 2016 the County, as part of the first phase of development and preparation of the CAP, released Final Technical Memorandum #1: 2014 Greenhouse Gas Emissions Inventory and Forecast, April 13, 2016.

---

2 County of Napa, March 2012, Napa County Draft Climate Action Plan, Prepared by ICF International. Sacramento, CA
Overall increases in Greenhouse Gas (GHG) emissions in Napa County were assessed in the Environmental Impact Report (EIR) prepared for the Napa County General Plan Update and certified in June 2008. GHG emissions were found to be significant and unavoidable in that document, despite the adoption of mitigation measures incorporating specific policies and action items into the General Plan.

Consistent with these General Plan action items, Napa County participated in the development of a community-wide GHG emissions inventory and “emission reduction framework” for all local jurisdictions in the County in 2008-2009. This planning effort was completed by the Napa County Transportation and Planning Agency in December 2009, and served as the basis for development of a refined inventory and emission reduction plan for unincorporated Napa County.

During our ongoing planning effort, the County requires project applicants to consider methods to reduce GHG emissions consistent with Napa County General Plan Policy CON-65(e). (Note: Pursuant to State CEQA Guidelines Section 15183, because this initial study assesses a project that is consistent with an adopted General Plan for which an environmental impact report (EIR) was prepared, it appropriately focuses on impacts which are “peculiar to the project,” rather than the cumulative impacts previously assessed.) For the purposes of this analysis potential GHG emissions associated with ‘construction’ and ‘development’ and with ‘ongoing’ business operations have been discussed.

GHGs are the atmospheric gases whose absorption of solar radiation is responsible for the greenhouse effect, including carbon dioxide, methane, ozone, and the fluorocarbons, that contribute to climate change (a widely accepted theory/science that explains human effects on the atmosphere). Carbon Dioxide (CO2) gas, the principal greenhouse gas (GHG) being emitted by human activities, and whose concentration in the atmosphere is most affected by human activity, also serves as the reference gas to compare other greenhouse gases. Typical sources of carbon emissions include land clearing, land use change, biomass burning, and motor vehicle and equipment. Equivalent Carbon Dioxide (CO2e) is the most commonly reported type of GHG emission and a way to get one number that approximates total emissions from all the different gasses that contribute to GHG (BAAMD CEQA Air Quality Guidelines, May 2012). In this case, carbon dioxide (CO2) is used as the reference atom/compound to obtain atmospheric carbon CO2 effects of GHG. Carbon stocks are converted to carbon dioxide equivalents (CO2e) by multiplying the carbon total by 44/12 (or 3.67), which is the ratio of the atomic mass of a carbon dioxide molecule to the atomic mass of a carbon atom.

One time “Construction Emissions” associated with the project includes: i) the carbon stocks that are lost (or released) when existing vegetation is removed and soil is ripped in preparation for the new building, parking lot and associated infrastructure; and ii) emissions associated with the energy used to develop and prepare the project area and construct the project, including construction equipment and worker vehicle trips (hereinafter referred to as Equipment Emissions). These emissions also include underground carbon stocks (or Soil carbon) associated with the existing vegetation that is proposed to be removed.

In addition to the one time Construction Emissions, “Operational Emissions” of the project are also considered and include: i) any reduction in the amount of carbon sequestered by existing vegetation that is removed as part of the project compared to a “no project” scenario (hereinafter referred to as Operational Sequestration Emissions); and ii) ongoing emissions from the energy used to maintain and operate the project, including vehicle trips associated with employee, delivery and visitor trips (hereinafter referred to as Operational Emissions). Operational Emissions from the proposed project would be the primary source of emissions over the long-term when compared to one time construction emissions.

A Greenhouse Gases Emissions Impact Analysis was prepared by FirstCarbon Solutions, dated April 20, 2018, to evaluate the projects greenhouse gas emissions. The California Emissions Estimator Model (CalEEMod), version 2016.3.2, was utilized to estimate project emissions. The Bay Area Air Quality Management District (BAAQMD) identifies sources of information on potential thresholds of significance and mitigation strategies for operational GHG emissions from land-use development projects in its CEQA Air Quality Guidelines (May 2017.) The BAAQMD significance criterion applicable to the project is whether the project would result in annual GHG emissions greater than 1,100 metric tons per year (MT/yr) of carbon dioxide and carbon dioxide equivalents (CO2e). Although BAAQMD has not developed specific construction GHG thresholds, the operational threshold of significance is also being used to evaluate the projects construction emissions.

The project would generate GHG emissions during construction activities including site preparation, use of heavy construction vehicles and equipment, material deliveries, and trips associated with construction workers. The project is expected to be constructed over a two-year period. The report indicated that the first year of construction, which includes site preparation, grading and construction of the building, would generate approximately 623 MT CO2e. The second year, which would include completion of the building, paving and architectural coatings, would generate approximately 493 MT CO2e. Operational GHG emissions are associated with area sources (landscape and building maintenance), energy use, mobile sources (motor vehicle trips), water use, and wastewater treatment. The report indicates that the project is expected to generate approximately 974 MT CO2e per year. Construction and operational emissions would therefore not exceed the
threshold. The study assumed GHG reduction design features that will be part of the project and required as conditions of approval, as follows:

i. Require that the project complies with CalGreen 2016 Title 24 energy standards, as may be amended or updated, including, but not limited to:
   - Sensors shall be installed in all enclosed offices that detect if the office is occupied that will activate the HVAC and lighting.
   - LED lights installed throughout.
ii. At least 20 percent of waste created on-site shall be recycled/composted.

In addition, the applicant has indicated that the project will incorporate the following voluntary best management practices: roof will be engineered to accommodate PV panels; bioswales and native plantings; build to CALGREEN Tier 2; a Transportation Demand Management plan which will include employee and bike riding incentives; energy conserving lighting; cool roof construction; installation of water efficient fixtures; low impact development; new vegetation/water efficient landscaping; and, onsite recycling. Additional items are included in the Voluntary Best Management Practices Checklist for Development Projects form included with the Use Permit Application. Greenhouse Gas Emission reductions from local programs and project level actions, such as application of the Cal Green Building Code, vehicle fuel efficiency standards, and the project-specific on-site programs identified above would combine to further reduce emissions below BAAQMD thresholds.

As indicated above the County is currently preparing a CAP and as the part of the first phase of development and preparation of the CAP has released Final Technical Memorandum #1 (2014 Greenhouse Gas Emissions Inventory and Forecast, April 13, 2016). Table 1 of the Technical Memorandum indicates that 2% of the County’s GHG emissions in 2014 were a result of land use change.

The increase in emissions anticipated as a result of the project would be minor and the project is in compliance with the County’s efforts to reduce emissions as described above. Accordingly, the project’s impacts would be less than significant.

**Mitigation Measures:** None required.

</tr>
</tbody>
</table>
h) Expose people or structures to a significant risk of loss, injury or death involving wild-land fires, including where wild-lands are adjacent to urbanized areas or where residences are intermixed with wild-lands?

Discussion:

a. The proposed project will not involve the transport of hazardous materials other than those small amounts normally used in construction of the building. A Business Plan will be filed with the Environmental Health Division should the amount of hazardous materials reach reportable levels. However, in the event that the proposed use or a future use involves the use, storage or transportation of greater the 55 gallons or 500 pounds of hazardous materials, a use permit and subsequent environmental assessment would be required in accordance with the Napa County Zoning Ordinance prior to the establishment of the use. During construction of the project some hazardous materials, such as building coatings/ adhesives/ etc., will be utilized. However, given the quantities of hazardous materials and the limited duration of construction activity, they will result in a less-than-significant impact.

b. The project would not result in the release of hazardous materials into the environment.

c. There are no schools located within one-quarter mile from the proposed project site.

d. The proposed site is not on any known list of hazardous materials sites.

e. The project site is located within two miles of the Napa County Airport, and is therefore subject to the requirements of the County's Airport Compatibility Combination zoning district and the requirements of the Napa County Airport Land Use Compatibility Plan (ALUCP). The project site is located within compatibility Zone C of the Napa County Airport, which is an extended approach/departure zone with aircraft overflight below 300-feet above ground level. The proposed use of the building is considered to be compatible with the risk and noise impacts associated with properties within Zone C. The building has also been designed to comply with specific requirements regarding light and glare to ensure airport land use compatibility. County development regulations have been certified as meeting ALUC compatibility requirements, and consequently the project is not subject to separate ALUC review because it has been designed to comply with County airport compatibility land use requirements. As a condition of approval, the project will require a notice to be filed with the Federal Aviation Agency 45 days prior to the commencement of construction in accordance with 14 CFR Part 77.9.

f. The project site is not located within the vicinity of any private airports.

g. The proposed driveway that would serve the project will be designed to comply with County standards and access to the building has been designed to accommodate fire apparatus and large trucks. The project has been reviewed by the County Fire Department and Engineering Services Division and found acceptable as conditioned. Therefore, the design of the project will not negatively impact or hinder emergency vehicle access.

h. The project would not increase exposure of people and/or structures to a significant loss, injury or death involving wild land fires because the project is located within an urbanized area.

Mitigation Measures: None required.

IX. HYDROLOGY AND WATER QUALITY. Would the project:

a) Violate any water quality standards or waste discharge requirements?

b) Substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g., the production rate of pre-existing nearby wells would drop to a level which would not support existing land uses or planned uses for which permits have been granted)?
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, in a manner which would result in substantial erosion or siltation on- or off-site?

d) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site?

e) Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?

f) Otherwise substantially degrade water quality?

g) Place housing within a 100-year flood hazard area as mapped on a federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map?

h) Place within a 100-year flood hazard area structures which would impede or redirect flood flows?

i) Expose people or structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam?

j) Inundation by seiche, tsunami, or mudflow?

Discussion:

On January 14, 2014, Governor Jerry Brown declared a drought emergency in the state of California. That declaration was followed up on April 1, 2015, when the Governor directed the State Water Resources Control Board to implement mandatory water reductions in cities and town across California to reduce water usage by 25 percent. These water restrictions do not apply to agricultural users. However, on April 7, 2017, Governor Jerry Brown signed an executive order lifting California’s drought emergency in all but four counties (Fresno, Kings, Tulare and Tuolumne). The County of Napa had not adopted or implemented any additional mandatory water use restrictions. The County requires all Use Permit applicants to complete necessary water analyses in order to document that sufficient water supplies are available for the proposed project and to implement water saving measures to prepare for periods of limited water supply and to conserve limited groundwater resources.

a. The proposed project will not violate any known water quality standards or waste discharge requirements. The project will discharge into an approved storm drainage system designed to accommodate the drainage from this site. The applicant is required to obtain a stormwater permit from the Regional Water Quality Control Board (RWQCB) which is administered in part by the County Engineering Services Division on behalf of the RWQCB. Given the essentially level terrain, and the County's Best Management Practices, which comply with RWQCB requirements, the project does not have the potential to significantly impact water quality and discharge standards.

b. The project will receive water from the City of American Canyon. The project is located within an area designated for urban development by the City of American Canyon. The City has acquired water rights to provide adequate water for all areas within their service area. The City has reviewed the proposed project and determined that in order to comply with the City’s Zero Water Footprint (ZWF) Policy the applicant shall contribute to the City’s water conservation fund and has issued a Will Serve letter for the proposal. No groundwater wells are associated with this property. (see Section XVII Utilities and Service Systems (d), below.)

c/d. The proposed project will not substantially alter the drainage pattern on site or cause a significant increase in erosion or siltation on or off site. The project will incorporate erosion control measures appropriate to its maximum slope to manage onsite surface drainage and erosion of onsite soils during construction and winter months (October to April). As noted above, the project is required to comply with County Engineering Services Division requirements which are consistent with RWQCB standards. These established Best Management Practices have been successfully implemented on numerous previous projects within the NVBPSP area. By incorporating erosion control measures, this project would have a less than significant impact. No substantial alteration of existing drainage is anticipated to occur. There will be an increase in the overall impervious surface resulting from the new buildings, pavement and sidewalks. However, given the size of the drainage basin, the increase in impervious surfaces will not discernibly change the amount of groundwater filtration or discernibly increase surface runoff from that which currently exists on site. Project impacts related to drainage patterns and off-site flows are expected to be less than significant.
e. The existing storm drainage system is designed to County standards and is sized to accommodate all drainage from this site.

f. The project includes water quality detention and treatment basins which provide treatment of the stormwater by filtering pollutants prior to discharge into the storm drain system. There are no other factors in this project that would otherwise degrade water quality.

G-i. According to Napa County environmental resource mapping (Floodplain and Dam Levee Inundation layers), the project site is not located within a flood hazard area, nor would it impede or redirect flood flows or expose structures or people to flooding. The project site is not located within a dam or levee failure inundation zone.

j. In coming years, higher global temperatures are expected to raise sea level by expanding ocean water, melting mountain glaciers and small ice caps, and causing portions of Greenland and the Antarctic ice sheets to melt. The Intergovernmental Panel on Climate Change estimates that the global average sea level will rise between 0.6 and 2 feet over the next century (IPCC, 2007). However, the project area is located at approximately 56 to 65 feet above mean sea level. There is no known history of mud flow in the vicinity. The project will not subject people or structures to a significant risk of inundation from tsunami, seiche, or mudflow.

**Mitigation Measures:** None required

<table>
<thead>
<tr>
<th>X. LAND USE AND PLANNING. Would the project:</th>
</tr>
</thead>
<tbody>
<tr>
<td>a) Physically divide an established community?</td>
</tr>
<tr>
<td>b) Conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the project (including, but not limited to the general plan, specific plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect?</td>

<tr>
<td>b)</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>c)</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Discussion:

a-c. The proposed project would not occur within an established community, nor would it result in the division of an established community. The proposed project complies with the Napa County General Plan, the Napa County Zoning Ordinance, applicable County Code sections, the Napa Valley Business Park Specific Plan, and all other applicable regulations. There are no habitat conservation plans or natural community conservation plans applicable to the property.

**Mitigation Measures:** None required.

<table>
<thead>
<tr>
<th>XI. MINERAL RESOURCES. Would the project:</th>
</tr>
</thead>
<tbody>
<tr>
<td>a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?</td>
</tr>
<tr>
<td>b) Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th></th>
<th>Potentially Significant Impact</th>
<th>Less Than Significant Impact With Mitigation Incorporation</th>

<td>☐</td>
<td>☐</td>
<td>☐</td>
<td>☒</td>
</tr>
<tr>
<td>b)</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Discussion:

a/b. Historically, the two most valuable mineral commodities in Napa County in economic terms have been mercury and mineral water. More recently, building stone and aggregate have become economically valuable. Mines and Mineral Deposits mapping included in the Napa County Baseline Data Report (Mines and Mineral Deposits, BDR Figure 2-2) indicates that there are no known mineral resources nor any locally important mineral resource recovery sites located on or near the project site. No impact would occur.

**Mitigation Measures:** None required.
XI. NOISE. Would the project result in:

- a) Exposure of persons to or generation of noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?  
- b) Exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels?  
- c) A substantial permanent increase in ambient noise levels in the project vicinity above levels existing without the project?  
- d) A substantial temporary or periodic increase in ambient noise levels in the project vicinity above levels existing without the project?  
- e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?  
- f) For a project within the vicinity of a private airstrip, would the project expose people residing or working in the project area to excessive noise levels?

Discussion:

a/b. The proposed project will result in a temporary increase in noise levels during the construction of the building, parking areas, and associated improvements. Construction activities will be limited to daylight hours using properly mufflered vehicles. Noise generated during this time is not anticipated to be significant. The proposed project would not result in long-term significant permanent construction noise impacts or operational impacts. Furthermore, construction activities would generally occur during the period of 7am-7pm on weekdays, during normal hours of human activity. All construction activities will be conducted in compliance with the Napa County Noise Ordinance (N.C.C. Chapter 8.16).

c/d. The anticipated level of noise to occur following the completion of construction including the operation of the facility would be typical of a light industrial/manufacturing/warehouse/distribution use in an existing industrial park. The project is located within an industrial park and is not in an area where noise increases resulting from additional industrial development will impact sensitive receptors. The design of the proposed project, together with adherence to the County Noise Ordinance, would ensure the proposed project would not result in adverse noise impacts.

d. The proposed project site is located within compatibility Zone C of the Napa County Airport, which is an extended approach/departure zone with aircraft overflight below 300-feet above ground level. As such, persons on the project site will be exposed to noise from regular aircraft overflight. The Napa County Zoning Code, section 8.16.070 Exterior noise limits, lists the maximum allowable level for Industrial areas as 75 dBA. Based on the County General Plan Community Character Element, figure CC-1: Napa County Airport Projected Noise Levels (dBA CNEL), the project site is located outside of the airport area projected to have levels of 60 dBA or less, which is less than the maximum allowed in the Industrial area. Therefore the location of the project within the airport land use area will have a less than significant impact on people working in the project area. The nature of the uses allowed in the Industrial Park (IP) zoning is not sensitive to increased noise levels from aircraft, and is considered compatible with aircraft operations.

f. The project is not within the vicinity of a private airstrip.

Mitigation Measures: None required.

**XIII. POPULATION AND HOUSING.** Would the project:

- Induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?  ☒  ☒  ☒  ☑
- Displace substantial numbers of existing housing, necessitating the construction of replacement housing elsewhere?  ☒  ☒  ☒  ☑
- Displace substantial numbers of people, necessitating the construction of replacement housing elsewhere?  ☒  ☒  ☒  ☑

**Discussion:**

The Association of Bay Area Governments’ Projections 2003 figures indicate that the total population of Napa County is projected to increase some 23 percent by the year 2030 (Napa County Baseline Data Report, November 30, 2005). Additionally, the County’s Baseline Data Report indicates that total housing units currently programmed in county and municipal housing elements exceed ABAG growth projections by approximately 15 percent. The project will be subject to the County’s housing impact mitigation fee, which provides funding to meet local housing needs.

Cumulative impacts related to population and housing balance were identified in the 2008 General Plan EIR. As set forth in Government Code §65580, the County of Napa must facilitate the improvement and development of housing to make adequate provision for the housing needs of all economic segments of the community. Similarly, CEQA recognizes the importance of balancing the prevention of environment damage with the provision of a “decent home and satisfying living environment for every Californian.” (See Public Resources Code §21000(g)). The 2008 General Plan sets forth the County’s long-range plan for meeting regional housing needs, during the present and future housing cycles, while balancing environmental, economic, and fiscal factors and community goals. The policies and programs identified in the General Plan Housing Element function, in combination with the County’s housing impact mitigation fee, to ensure adequate cumulative volume and diversity of housing. Cumulative impacts on the local and regional population and housing balance will be less than significant.

a. The project site is currently vacant and located in a developing industrial area. The project will increase the number of jobs within the industrial park. However, given the size of the project, the new jobs are considered to be relatively small compared to the overall business park and nearby communities; therefore this increase in jobs will not contribute to a cumulatively considerable increase in the demand for housing units within Napa County and the general vicinity. As noted above, the County has adopted a Housing Element which identifies locations for new affordable housing, and adopted a development impact fee. The fee provides funds for constructing affordable housing to off-set the cumulative existing affordable housing shortage in the County. The fee is paid at the time building permits are issued. This fee is charged to all new non-residential developments based on the gross floor area of non-residential space multiplied by the applicable fee by type of use as required under Chapter 18.107, of the Napa County Code and is considered to reduce housing impacts to a less than significant level.

b/c. There are no existing homes on, or adjacent to, the project site. The project will not result in the displacement of any housing units or people.

**Mitigation Measures:** None required.

**XIV. PUBLIC SERVICES.** Would the project result in:

- Substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:
  - Fire protection?  ☒  ☒  ☒  ☑
  - Police protection?  ☒  ☒  ☒  ☑
  - Schools?  ☒  ☒  ☒  ☑
Parks?

Other public facilities?

Discussion:

a. The proposed project will have a less than significant impact on public services. Fire protection measures are required as part of the development and there would be no expected impact to response time as the property has good public road access. School impact mitigation fees will be levied with the building permit application. Those fees assist local school districts with capacity building measures, and by law are considered full mitigation for any impacts. The project will have little impact on public parks. County revenue resulting from building permit fees, and property tax increases will help meet the costs of providing public services to the property.

Mitigation Measures: None required.

XV. RECREATION. Would the project:

a) Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?

b) Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?

Discussion:

a/b. This application proposes a new light industrial/warehouse building and on-site employment. No portion of this project, nor any foreseeable result thereof, would significantly increase the use of existing recreational facilities. This project does not include recreational facilities that would have a significant adverse effect on the environment.

Mitigation Measures: None required.

XVI. TRANSPORTATION/TRAFFIC. Would the project:

a) Cause an increase in traffic which is substantial in relation to the existing traffic load and capacity of the street system and/or conflict with General Plan Policy CIR-16, which seeks to maintain an adequate Level of Service (LOS) at signalized and unsignalized intersections, or reduce the effectiveness of existing transit services or pedestrian/bicycle facilities?

b) Conflict with an applicable congestion management program, including, but not limited to level of service standards and travel demand measures, or other standards established by the Napa County Transportation and Planning Agency for designated roads or highways?

c) Result in a change in air traffic patterns, including either an increase in traffic levels or a change in location that results in substantial safety risks?

d) Substantially increase hazards due to a design feature, (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?

e) Result in inadequate emergency access?
The County has established that a significant traffic impact would occur if increases in traffic from a project would cause intersections or two-lane highway capacity to deteriorate to worse than LOS E, or at intersections or two-lane highway where base case (without project) is LOS F, a significant impact is considered to occur if a project increases the base volumes by more than one percent. Napa County utilizes a one percent significance threshold for the identification of significant adverse traffic impact during peak hours of travel. This threshold was directed by the Napa County Transportation and Planning Agency. This factor has been used consistently as the significance determination for all development projects within the NVBPSP area.

The Metropolitan Transportation Commission (MTC) serves as the transportation planning, coordinating and financing agency for the nine-county San Francisco Bay Area. The MTC created and maintains the Metropolitan Transportation System (MTS), a multimodal system of highways, major arterials, transit service, rail lines, seaports and airports. MTS facilities within the vicinity of the project site include State Routes 12, 29, 121, and 221, and Airport Boulevard. The State routes are maintained and operated by the California Department of Transportation (Caltrans.) The MTS is incorporated into MTC's 2001 Regional Transportation Plan (RTP), and is used as a guideline in prioritizing for planning and funding of facilities in the Bay Area.

Major improvements to both Highway 29 and Highway 12 are necessary to address existing and cumulative regional traffic congestion. The RTP and the Napa County General Plan 2008 update identify roadway improvements in South Napa County to address potential cumulative impacts. These improvements include construction of a flyover ramp at SR 12/29/221 intersection, construction of a new interchange at SR 12/Airport Blvd/SR 29 intersection, widening Jameson Canyon (SR 12) to four lanes (recently completed), widening SR 29 to six lanes between south Airport Blvd and the south County line (in coordination with the City of American Canyon), and extending Devlin Road south to Green Island Road. These improvements are not yet fully funded, except as noted above, but are expected to be in place by 2030 addressing potential cumulative impacts in the southern part of the County.

As mandated by Napa County, projects within the industrial park are responsible for paying “fair share” costs for the construction of improvements to impacted roadways within the NVBPSP. Since 1990, the County has imposed and collected traffic mitigation fees on all development projects within the NVBPSP area. A developer’s “fair share” fee goes toward funding roadway improvements within the NVBPSP area including improvements designed to relieve traffic on State Highways. The traffic mitigation fee is further described in Board of Supervisor’s Resolution 08-20. For this project, a traffic mitigation fee based on PM peak hour vehicle trips will be imposed and collected prior to issuance of a building permit as determined by the Director of Public Works.

The County has established that a significant traffic impact would occur if increases in traffic from a project would cause intersections or two-lane highway capacity to deteriorate to worse than LOS E, or at intersections or two-lane highway where base case (without project) is LOS F, a significant impact is considered to occur if a project increases the base volumes by more than one percent. Napa County utilizes a one percent significance threshold for the identification of significant adverse traffic impact during peak hours of travel. This threshold was directed by the Napa County Transportation and Planning Agency. This factor has been used consistently as the significance determination for all recent EIR and CEQA documents within the NVBPSP area.

The applicant has submitted a memo from W-Trans, dated April 10, 2018, addressing trip generation rates based on the Trip Generation Manual, 10th Edition, 2017, by the Institute of Traffic Engineers (ITE) for warehousing uses. According to the memo, consideration was given to evaluating the project based on the floor area, as is common for many land uses. However, a review of standard rates for warehousing uses and a comparison of those based on area versus those based on employees indicate that the average ratio between employees and floor space is about 2,900 square feet per employee which would result in a workforce of approximately 138 employees. As noted in the project description, the facility is expected to have 20 full-time and 20 part-time employees. Application of the rates with the number of employees as the independent variable would result in 202 trips per day during typical operation with 24 trips during the morning peak hour and 26 trips during the evening peak hour. Given that the operation would require 20 full-time employees and 20 part-time employees, use of the rates based on employees appears reasonable. It is noted that as is the case with standard trip generation rates, all trips generated by the use are included, so while the independent variable is employees, trips associated with trucks making deliveries or picking up case goods, visitors and other non-employees are reflected in the rate and resulting trip estimates.
According to information from the California Department of Transportation traffic counts taken in 2014 indicate the traffic volume at the State Highway 12/29 intersection was approximately 43,500 to 62,000 average annual daily vehicle trips. Peak hour trips were approximately 3,550 to 5,100 vehicles. Traffic generated by this project will contribute less than 1% to the traffic levels on local roadways and intersections and to deterioration in their level of service. This less than 1% increase is considered a less-than-significant level with the payment of the “fair share” development impact fee prior to issuance of a building permit as described in Board Resolution No. 08-20.

c. The project does not have any impact on air traffic patterns.

d/e. The project includes construction of a new driveway on Devlin Road, across the undeveloped eastern portion of the property. The new driveway will also provide access to the previously approved Rocca winery located on Assessor’s Parcel 057-170-007. The new driveway has been designed to comply with all County standards. The project will not result in any changes to levels of service or cause any new safety risks.

f. The project has been designed with 241 vehicle parking spaces on-site in accordance with the requirements of the NVBPSP based on the floor area and proposed use(s). The proposed facility is expected to employee a maximum of 40 people, full and part-time. The project will not result in inadequate parking.

g. The proposed project does not conflict with any known policies or plans supporting alternative transportation.

Mitigation Measures: None required.

---

XVII. TRIBAL CULTURAL RESOURCES. Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:

a) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k), or

b) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.

Discussion:

a/b. Pursuant to Public Resources Code section 21080.3.1, invitation for tribal consultation was completed. One response was received from the Middletown Rancheria dated August 31, 2017. The letter indicates that while the Middletown Rancheria has no comments, they would like to be notified should any resources be found. If any resources are found during earth disturbing activities, construction of the project would be required to cease and the appropriate individuals contacted in accordance with standard conditions of approval and Mitigation Measure CULT 1, as noted above in Section V. Cultural Resources.

Mitigation Measures: None required.

<td>☐</td>
<td>☐</td>
<td>☑</td>
<td>☐</td>
</tr>
</tbody>
</table>

**Discussion:**

a. The project will occur within an urbanized area and connect to a publicly maintained wastewater treatment system. The wastewater provider, Napa Sanitation District, has provided a Will Serve letter and has found the project to be in compliance with district master plans. The District’s wastewater treatment plant complies with all water quality discharge requirements, and therefore the project will comply with regional water quality control standards and therefore has a less than significant impact.

b. The project will not require construction of any new water or wastewater treatment facilities that will result in a significant impact to the environment. The project site is located in an area planned for industrial development and existing water and wastewater treatment facilities have been sized to accommodate the proposed project.

c. The proposed project includes the construction of new drainage facilities. The new drainage system will be designed by a qualified engineer and is subject to review and approval by the Engineering Services Division. The Engineering Services Division has included conditions of approval requiring that the drainage system be designed to avoid diversion or concentration of storm water runoff onto adjacent properties.

d. On January 14, 2014, Governor Jerry Brown declared a drought emergency in the state of California. That declaration was followed up on April 1, 2015, when the Governor directed the State Water Resources Control Board to implement mandatory water reductions in cities and town across California to reduce water usage by 25 percent. However, on April 7, 2017, Governor Jerry Brown signed an executive order lifting California’s drought emergency in all but four counties (Fresno, Kings, Tulare and Tuolumne).

The project will receive water from the City of American Canyon. On October 23, 2007, the City of American Canyon adopted a Zero Water Footprint (ZWF) Policy which defines a ZWF as “no net loss of water service reliability or increase in water rates to the City of American Canyon’s existing water service customers due to requested increase demand for water within the City’s water service area.” The City prepared a Water Supply Report (WSR), incorporated herein by reference, to determine if the requested water service is consistent with City ordinances, policies and practices; whether the City's water supply is sufficient to grant the request; and, establish a water allocation for the property. The WSR indicates the property has a baseline water footprint of zero gallons per day (gpd) because the project site is undeveloped and has no historic water use. The request includes an anticipated water demand of 714 gpd annualized average-day demand (AADD) and 1,304 gpd maximum day demand (MDD.) The City has determined that in order to comply with the City’s Zero Water Footprint (ZWF) Policy the applicant must offset the new AADD. According to the WSR, the applicant has committed to a financial contribution to the City’s Zero Water Footprint Mitigation Fund which is the primary funding source for the City’s Water Conservation Program. Payment of the mitigation funds offset the property’s increased AADD. In accordance with the SWR, the City has issued a will-serve letter for water service subject the ZWF offset described above and other conditions outlined in the City’s letter dated February 2, 2018, and incorporated as conditions of project approval.
e. See response “a.” above.

f. The proposed project will be served by a landfill with sufficient capacity to meet the project’s demands. A less than significant impact will occur from the disposal of solid waste generated by the proposed project.

g. The proposed project will comply with federal, state, and local statutes and regulations related to solid waste.

Mitigation Measures: None required.

</tr>
<tr>
<td>a) Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?</td>
<td>☐</td>
<td>☐</td>
<td>☒</td>
<td>☐</td>
</tr>
<tr>
<td>b) Does the project have impacts that are individually limited, but cumulatively considerable? (“Cumulatively considerable” means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?</td>
<td>☐</td>
<td>☐</td>
<td>☒</td>
<td>☐</td>
</tr>
<tr>
<td>c) Does the project have environmental effects that will cause substantial adverse effects on human beings, either directly or indirectly?</td>
<td>☐</td>
<td>☐</td>
<td>☒</td>
<td>☐</td>
</tr>
</tbody>
</table>

Discussion:

a. The site has been previously disturbed and does not contain any known listed plant or animal species. The project will not degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal. As discussed in Section IV above, although no special-status were found during site surveys, mitigation measures are proposed to conduct pre-construction surveys in the event that special-status species inhabit the site prior to construction. All potential biological related impacts would be less than significant. As identified in Section V above, no known historically sensitive sites or structures, archaeological or paleontological resources, sites of unique geological features have been identified within the project site. No historic or prehistoric resources are anticipated to be affected by the proposed project nor will the proposed project eliminate important examples of the major periods of California history or prehistory. In the event archaeological artifacts are found, a standard condition of approval and mitigation measure would be incorporated into the project. Impacts would be less than significant.

b. The project does not have impacts that are individually limited but cumulatively considerable. Potential air quality, greenhouse gas emissions, hydrology, and traffic impacts are discussed in the respective sections above. The analysis determined that all potential impacts were less than significant and would not contribute significantly to cumulative impacts. The project does not propose new development that would have a significant impact on the environment or substantially change the existing conditions. With the imposition of standard and project specific conditions of approval, the project does not have impacts that are individually limited, but cumulatively considerable.

c. All impacts identified in this Initial Study are less than significant and do not require mitigation. Therefore, the proposed project would not result in environmental effects that cause substantial adverse effects on human beings either directly or indirectly. Impacts would be less than significant.

Mitigation Measures: None required.

<td>BIO-2: If construction would commence anytime during the nesting/breeding season of the Swainson's hawk, northern harrier or other raptors, or other bird species listed in the Migratory Bird Treaty Act (typically February 1 through September 30), a preconstruction survey of the project vicinity for nesting birds shall be conducted. This survey shall be conducted by a qualified biologist (experienced with the nesting behavior of bird species of the region) within 14 days prior to the commencement of construction activities that would occur during the nesting/breeding season. The intent of the survey should be to determine if active nests are present within or adjacent to the construction zone within approximately 250 feet (300 feet for raptors). The survey shall also be conducted in accordance with the protocol of the Swainson’s Hawk Technical Advisory Committee’s (TAC) Recommended Timing and Methodology for Swainson’s Hawk Nesting Surveys in California’s Central Valley. The survey shall commence early in the Swainson’s hawk nesting season (late March to early April) and surveys will be conducted within a minimum 0.25-mile radius of the Project area. The surveys shall be timed such that the last survey is concluded no more than two weeks prior to initiation of construction. If ground disturbance activities are delayed following a survey, then an additional pre-construction survey should be conducted such that no more than two weeks will have elapsed between the last survey and the commencement of ground disturbance activities. If active nests are found in areas that could be directly or indirectly affected by the project, a no-disturbance buffer zone shall be created around active nests during the breeding season or until a qualified biologist determines that all young have fledged. If any active Swainson’s hawk nests are found during the survey,</td>
<td>Planning Division</td>
<td>Method of Mitigation Monitoring: The permittee shall have a nesting bird survey completed prior to any construction activities scheduled to occur on the site from February 1 through September 30. The survey shall also be conducted in accordance with the protocol of the Swainson’s Hawk Technical Advisory Committee’s (TAC) Recommended Timing and Methodology for Swainson’s Hawk Nesting Surveys in California’s Central Valley. The survey results shall be provided to the Napa County Planning, Building and Environmental Services. In the event any special-status or other protected nesting birds are found to occur on-site construction activities will be scheduled to avoid nesting and breeding periods and consultation will be sought with CDFW to develop appropriate measures to reduce potential impacts to nesting Swainson’s hawk which may include preservation of potential foraging habitat.</td>

| CDFW recommends a disturbance buffer of at least a 0.25 mile to avoid a “take” or adverse impacts to Swainson’s hawk. No trees or vegetation shall be removed from the project site during the breeding period. The size of the buffer zones and types of construction activities restricted within them should be determined through consultation with the CDFW depending on the species, taking into account factors such as the following:  
  - Noise and human disturbance levels at the construction site at the time of the survey and the noise and disturbance expected during the construction activity;  
  - Distance and amount of vegetation or other screening between the construction site and the nest; and  
  - Sensitivity of individual nesting species and behaviors of the nesting birds.  
|                                                                            |                           |                                        |                                           |
| The buffer zone around an active nest should be established in the field with orange construction fencing or another appropriate barrier and construction personnel should be instructed on the sensitivity of nest areas. The qualified biologist should serve as a construction monitor during those periods when construction activities would occur near active nest areas of special status bird species to ensure that no impacts on these nests occur. |                           |                                        |                                           |

**Cultural Resources (V)**

CULT-1: Construction personnel attend a brief workshop conducted by a qualified archaeologist regarding the types of materials and features that may be encountered during construction and the procedure to follow if resources are discovered.

**PROJECT REVISION STATEMENT**

I understand and explicitly agree that with regards to all California Environmental Quality Act, Permit Streamlining Act, and Subdivision Map Act processing deadlines, this revised application will be treated as a new project, filed on the date this project revision statement is received by the Napa County Planning, Building and Environmental Services Department. For purposes of Section 69543 of the Permit Streamlining Act, the date of application completeness shall remain the date this project was originally found complete.
