

Initial Study/Negative Declaration

COUNTY OF NAPA PLANNING, BUILDING AND ENVIRONMENTAL SERVICES DEPARTMENT 1195 THIRD STEET SUITE 210 NAPA, CA 94559 (707) 253-4417

Initial Study Checklist (form updated January 2019)

- 1. **Project Title**: Hyde Winery, Use Permit Modification (P17-00026)
- 2. **Property Owner:** Hyde Wines, LLC, 1044 Los Carneros Avenue, Napa, CA 94559
- 3. County Contact Person, Phone Number and email: Sean Trippi, Principal Planner, (707) 299-1353, sean.trippi@countyofnapa.org
- Project Location and Assessor's Parcel Number (APN): The project is located on a 12.26 acre property on the southeast corner of State Route 12/121 and Los Carneros Avenue. 1044 Los Carneros Avenue, Napa. APN: 047-220-013.
- 5. Project sponsor's name and address: Jeff Dodd, Coblentz, Patch, Duffy, & Bass LLP, 700 Main Street, Suite 210, Napa, CA 94559
- 6. **General Plan description**: Agricultural Resource
- 7. **Zoning:** Agricultural Watershed
- 8. Background/Project History:

On August 4, 2010, the Planning Commission approved a use permit (file #P09-00025-UP) and adopted a negative declaration to establish a 30,000 gallon per year winery in a 9,947 sf winery building with a 2,413 sf covered outdoor crush pad. The approval included two full-time and two part-time employees, 13 parking spaces (12 were provided), tours and tastings by appointment with a maximum of 20 visitors per day and 120 visitors per week, and a marketing plan with 10 annual events with 30 guests and one annual event and for 100 guests.

9. Description of Project:

Approval of Use Permit Major Modification to an existing 30,000 gallon per year winery to modify previous project approval to allow the following:

- (a) increase daily tours and tastings by appointment only from 20 visitors per day, 120 visitors per week (6,240 visitors per year), to 125 visitors per day, 875 visitors per week (45,500 visitors per year);
- (b) increase marketing events from 10 per year with up to 30 guests at each event and one (1) per year with up to 100 guests at each event (400 guests per year) to eight (8) events per year with up to 55 guests at each event, two (2) events per year with up to 150 guests at each event, one (1) per year with up to 100 guests at each event (840 guest per year);
- (c) increase previously approved on-site parking from 13 parking spaces to 35 parking spaces;
- (d) increase employees from two (2) full-time and two (2) part-time to five (5) full-time and four (4) part-time;
- (e) construct a 3,659 sf outdoor, uncovered patio (near the existing barn);
- (f) on-premise consumption of wines produced on site in the tasting room and the existing and proposed outdoor patios in accordance with Business and Professions Code Sections 23358, 23390 and 23396.5;
- (g) appointment of a winery staff member as Travel Demand Management (TDM) coordinator to schedule the additional tastings so none would end during the weekday and Saturday P.M. peak, facilitate reducing auto commuting trips and promote use of shuttle buses to all marketing events in order to reduce overall vehicle trips to the site and lessen Vehicle Miles Traveled (VMT) associated with the winery; and,
- (h) driveway improvements, signage, and landscape improvements.

No new buildings or expansion of existing buildings is proposed.

10. Describe the environmental setting and surrounding land uses.

The 12.26 acre project site is located on the southeast corner of State Route 12/121 and Los Carneros Avenue, between Cuttings Wharf Road and Old Sonoma Highway. The project site is currently developed with a winery, agricultural barn and approximately 7.8 acres of vines. A single family home previously located on the site was demolished in 2017. The water source for the existing winery and

vineyards are from two existing onsite wells. Domestic and process wastewater are treated and dispersed on-site. Access to the site is provided by driveway connection from Los Carneros Avenue, approximately 860 feet south of its intersection with State Route 12/121. The property is relatively flat (±0-5% slope) with elevations on the property ranging from approximately 115 feet above mean sea level (msl) to approximately 120 feet above msl.

Surrounding land uses are primarily vineyards, wineries, the Carneros Inn Resort and Spa, residences, and a dog kennel. Properties in the vicinity of the project site range in size between 10,000 sf and 28 acres and the nearest residence to the existing winery building is approximately 416 feet to the west. The nearest winery, Saintsbury Winery, is located approximately 1/3 mile south of the proposed site.

Other agencies whose approval is required (e.g., permits, financing approval, or participation agreement).

Discretionary approval required by Napa County consists of a use permit modification. The proposed project would also require various ministerial approvals by the County including, but not limited to building permits, grading permits and encroachment permits. A Storm Water Pollution Prevention Plan (SWPPP) is required to meet San Francisco Regional Water Quality Control Board standards and is administered by the Engineering Services Division.

Responsible (R) and Trustee (T) Agencies None

Other Agencies Contacted
Federal Trade and Taxation Bureau
Department of Alcoholic Beverage Control

12. **Tribal Cultural Resources**. Have California Native American tribes traditionally and culturally affiliated with the project area requested consultation pursuant to Public Resources Code section 21080.3.1? If so, is there a plan for consultation that includes, for example, the determination of significance of impacts to tribal cultural resource, procedures regarding confidentiality, etc.?

On August 28, 2017, County Staff sent invitations to consult on the proposed project to Native American tribes who had a cultural interest in the area and who as of that date had requested to be invited to consult on projects, in accordance with the requirements of Public Resources Code section 21080.3.1. A response was received from the Middletown Rancheria stating that they have no comments at this time. However, they did request that they be contacted should there be discovery of cultural resources during project construction. No other comments were received and the consultation closed on September 27, 2017.

Note: Conducting consultation early in the CEQA process allows tribal governments, lead agencies, and project proponents to discuss the level of environmental review, identify and address potential adverse impacts to tribal cultural resources, and reduce the potential for delay and conflict in the environmental review process. (See Public Resources Code section 21080.3.2.) Information may also be available from the California Native American Heritage Commission's Sacred Lands File per Public Resources Code section 5097.96 and the California Historical Resources Information System administered by the California Office of Historic Preservation. Please also note that Public Resources Code section 21082.3(c) contains provisions specific to confidentiality.

ENVIRONMENTAL IMPACTS AND BASIS OF CONCLUSIONS:

Planning, Building and Environmental Services Department

The conclusions and recommendations contained herein are professional opinions derived in accordance with current standards of professional practice. They are based on a review of the Napa County Environmental Resource Maps, the other sources of information listed in the file, and the comments received, conversations with knowledgeable individuals; the preparer's personal knowledge of the area; and, where necessary, a visit to the site. For further information, see the environmental background information contained in the permanent file on this project.

On the	basis of this initial evaluation:	
	I find that the proposed project COULD NOT have a significant effect prepared. I find that although the proposed project could have a significant effect because revisions in the project have been made by or agreed to by will be prepared. I find that the proposed project MAY have a significant effect on the en I find that the proposed project MAY have a "potentially significant environment, but at least one effect 1) has been adequately analyzed 2) has been addressed by mitigation measures based on the earlier IMPACT REPORT is required, but it must analyze only the effects that I find that although the proposed project could have a significant effect have been analyzed adequately in an earlier EIR or NEGATIVE DECAYOUGH or mitigated pursuant to that earlie	on the environment, there will not be a significant effect in this case the project proponent. A MITIGATED NEGATIVE DECLARATION vironment, and an ENVIRONMENTAL IMPACT REPORT is required. Impact or "potentially significant unless mitigated" impact on the in an earlier document pursuant to applicable legal standards, and analysis as described on attached sheets. An ENVIRONMENTAL remain to be addressed. It on the environment, because all potentially significant effects (a) CLARATION pursuant to applicable standards, and (b) have been
Signatur	<u>Sean Trippi</u> e	August 12, 2020 Date
Name:_	Sean Trippi, Principal Planner Napa County	

I.	AESTHETICS. Except as provided in Public Resources Code Section 21099, would the project:		Potentially Significant Impact	Less Than Significant With Mitigation Incorporation	Less Than Significant Impact	No Impact
	a)	a) Have a substantial adverse effect on a scenic vista?				\boxtimes
	b)	Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?				
	c)	In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from a publicly accessible vantage point.) If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?				\boxtimes
	d)	Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?			\boxtimes	

- a-c. Visual resources are those physical features that make up the environment, including landforms, geological features, water, trees and other plants, and elements of the human cultural landscape. A scenic vista, then, would be a publicly accessible vantage point such as a road, park, trail, or scenic overlook from which distant or landscape-scale views of a beautiful or otherwise important assembly of visual resources can be taken-in. As generally described in the **Environmental Setting and Surrounding Land Uses** section, above, this area is defined by a mix of vineyard, winery, and residential uses. The project would not result in substantial damage to scenic resources, including trees and rock outcroppings, or substantially degrade the visual character or quality of the site and its surroundings. The project site is currently developed with a winery, vineyards, and an agricultural building. External changes to the winery are limited to new parking areas, an outdoor patio, driveway improvements as applicable, a freestanding sign, and landscaping. The proposed project would not be located in an area which would damage any known scenic vista, or damage scenic resources, trees, rock outcroppings, or historic buildings.
- d. Although the site is currently developed with an existing winery and agricultural building, the proposed improvements may result in the installation of additional lighting that may have the potential to impact nighttime views. The project is in an area that has a certain amount of existing nighttime lighting, but the installation of new sources of nighttime lights may affect nighttime views. Pursuant to Napa County's standard conditions of approval for wineries, outdoor lighting would be required to be shielded and directed downwards, with only low level lighting allowed in parking areas. As subject to the standard conditions of approval, below, the project will not have a significant impact resulting from new sources of outside lighting.

6.3 LIGHTING – PLAN SUBMITTAL

- a. Two (2) copies of a detailed lighting plan showing the location and specifications for all lighting fixtures to be installed on the property shall be submitted for Planning Division review and approval. All lighting shall comply with the CBC.
- b. All exterior lighting, including landscape lighting, shall be shielded and directed downward, shall be located as low to the ground as possible, shall be the minimum necessary for security, safety, or operations; on timers; and shall incorporate the use of motion detection sensors to the greatest extent practical. All lighting shall be shielded or placed such that it does not shine directly on adjacent properties or impact vehicles on adjacent streets. No flood-lighting or sodium lighting of the building is permitted, including architectural highlighting and spotting. Low-level lighting shall be utilized in parking areas as opposed to elevated high-intensity light standards.
- 4.16 GENERAL PROPERTY MAINTENANCE LIGHTING, LANDSCAPING, PAINTING, OUTDOOR EQUIPMENT STORAGE, AND TRASH ENCLOSURE AREAS
 - a. All lighting shall be permanently maintained in accordance with the lighting and building plans approved by the County. Lighting utilized during harvest activities is exempt from this requirement.

II.	AG	RICULTURE AND FOREST RESOURCES.1 Would the project:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporation	Less Than Significant Impact	No Impact
	a)	Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Important (Farmland) as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?				
	b)	Conflict with existing zoning for agricultural use, or a Williamson Act contract?				\boxtimes
	c)	Conflict with existing zoning for, or cause rezoning of, forest land as defined in Public Resources Code Section 12220(g), timberland as defined in Public Resources Code Section 4526, or timberland zoned Timberland Production as defined in Government Code Section 51104(g)?				\boxtimes
	d)	Result in the loss of forest land or conversion of forest land to non- forest use in a manner that will significantly affect timber, aesthetics, fish and wildlife, biodiversity, water quality, recreation, or other public benefits?				
	e)	Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland to non-agricultural use?				

- a. The California Department of Conservation District map designates the planted vineyards as "Farmland of Statewide Importance" and the winery development area as "Other Land." The proposed project would not conflict with existing zoning for agricultural uses. General Plan Agricultural Preservation and Land Use policies AG/LU-2 and AG/LU-13 recognize wineries, and any use consistent with the Winery Definition Ordinance and clearly accessory to a winery, as agriculture. Thus, the proposed project would not result in a significant impact with respect to conversion of farmland. No vines are proposed to be removed to facilitate construction of the proposed parking spaces and patio. There are no other changes included in this proposal that would result in the conversion of Farmland.
- b. The County's zoning of the property is AW (Agricultural Watershed) and the General Plan land use designation of the property is Agricultural Resource. The winery and proposed modifications are consistent with the property's zoning, as Napa County Code Section 18.20.030 lists wineries and related, accessory uses as conditionally permitted in the AW District. General Plan Policies AG/LU-20 and AG/LU-21 also identify processing of agricultural products (grape crushing/winemaking) as a use that is consistent with the Agricultural Resource land use designation. There is a Williamson Act contract that is applicable to this property which allows agricultural processing facilities including wineries.
- c/d. The project site is zoned AW (Agricultural Watershed), which allows wineries upon grant of a use permit. The proposed parking spaces and existing winery are located in an area of the site that is also developed with vineyards and other improvements. No vines are proposed to be removed to accommodate the additional parking spaces. According to the Napa County Environmental Resource Maps (based on the following layers Sensitive Biotic Oak woodlands, Riparian Woodland forest, and Coniferous forest) the project site does

¹ "Forest land" is defined by the State as "land that can support 10-percent native tree cover of any species, including hardwoods, under natural conditions, and that allows for management of one or more forest resources, including timber, aesthetics, fish and wildlife, biodiversity, water quality, recreation, and other public benefits." (Public Resources Code Section 12220(g)) The Napa County General Plan anticipates and does not preclude conversion of some "forest land" to agricultural use, and the program-level EIR for the 2008 General Plan Update analyzed the impacts of up to 12,500 acres of vineyard development between 2005 and 2030, with the assumption that some of this development would occur on "forest land." In that analysis specifically, and in the County's view generally, the conversion of forest land to agricultural use would constitute a potentially significant impact only if there were resulting significant impacts to sensitive species, biodiversity, wildlife movement, sensitive biotic communities listed by the California Department of Fish and Wildlife, water quality, or other environmental resources addressed in this checklist.

not contain lands classified as containing sensitive biotic communities, except for an area at the northeast corner of the property, well outside the proposed development area. Therefore, the proposed project would not conflict with existing zoning for, or cause rezoning of, forest land, timberland, or timberland zoned Timberland Production.

e. As discussed in item "a.", above, the winery and winery accessory uses are defined as agricultural by the Napa County General Plan and are allowed under the parcel's AW (Agricultural Watershed) zoning. Neither this project, nor any foreseeable consequence thereof, would result in changes to the existing environment which would result in the conversion of special status farmland to a non-agricultural use.

Mitigation Measures: None required

III.	the	AIR QUALITY. Where available, the significance criteria established by the applicable air quality management or air pollution control district may be relied upon to make the following determinations. Would the project:		Less Than Significant With Mitigation Incorporation	Less Than Significant Impact	No Impact
	a)	Conflict with or obstruct implementation of the applicable air quality plan?			\boxtimes	
	b)	Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?			\boxtimes	
	c)	Expose sensitive receptors to substantial pollutant concentrations?			\boxtimes	
	d)	Result in other emissions (such as those leading to odors adversely affecting a substantial number of people)?			\boxtimes	

Discussion:

On June 2, 2010, the Bay Area Air Quality Management District's (BAAQMD) Board of Directors unanimously adopted thresholds of significance to assist in the review of projects under the California Environmental Quality Act. These Thresholds are designed to establish the level at which BAAQMD believed air pollution emissions would cause significant environmental impacts under CEQA and were posted on BAAQMD's website and included in BAAQMD's updated CEQA Guidelines (updated May 2012). The Thresholds are advisory and may be followed by local agencies at their own discretion.

The Thresholds were challenged in court. Following litigation in the trial court, the court of appeal, and the California Supreme Court, all of the Thresholds were upheld. However, in an opinion issued on December 17, 2015, the California Supreme Court held that CEQA does not generally require an analysis of the impacts of locating development in areas subject to environmental hazards unless the project would exacerbate existing environmental hazards. The Supreme Court also found that CEQA requires the analysis of exposing people to environmental hazards in specific circumstances, including the location of development near airports, schools near sources of toxic contamination, and certain exemptions for infill and workforce housing. The Supreme Court also held that public agencies remain free to conduct this analysis regardless of whether it is required by CEQA.

In view of the Supreme Court's opinion, local agencies may rely on Thresholds designed to reflect the impact of locating development near areas of toxic air contamination where such an analysis is required by CEQA or where the agency has determined that such an analysis would assist in making a decision about the project. However, the Thresholds are not mandatory and agencies should apply them only after determining that they reflect an appropriate measure of a project's impacts. These Guidelines may inform environmental review for development projects in the Bay Area, but do not commit local governments or BAAQMD to any specific course of regulatory action.

BAAQMD published a new version of the Guidelines dated May 2017, which includes revisions made to address the Supreme Court's opinion. The May 2017 Guidelines update does not address outdated references, links, analytical methodologies or other technical information that may be in the Guidelines or Thresholds Justification Report. The Air District is currently working to revise any outdated information in the Guidelines as part of its update to the CEQA Guidelines and thresholds of significance.

a/b. The mountains bordering Napa Valley block much of the prevailing northwesterly winds throughout the year. Sunshine is plentiful in Napa County, and summertime can be very warm in the valley, particularly in the northern end. Winters are usually mild, with cool temperatures overnight and mild-to-moderate temperatures during the day. Wintertime temperatures tend to be slightly cooler in the northern end of the valley. Winds are generally calm throughout the county. Annual precipitation averages range from about 24 inches in low elevations to more than 40 inches in the mountains.

Ozone and fine particle pollution, or $PM_{2.5}$, are the major regional air pollutants of concern in the San Francisco Bay Area. Ozone is primarily a problem in the summer, and fine particle pollution in the winter. In Napa County, ozone rarely exceeds health standards, but $PM_{2.5}$ occasionally does reach unhealthy concentrations. There are multiple reasons for $PM_{2.5}$ exceedances in Napa County. First, much of the county is wind-sheltered, which tends to trap $PM_{2.5}$ within the Napa Valley. Second, much of the area is well north of the moderating temperatures of San Pablo Bay and, as a result, Napa County experiences some of the coldest nights in the Bay Area. This leads to greater fireplace use and, in turn, higher $PM_{2.5}$ levels. Finally, in the winter easterly winds often move fine-particle-laden air from the Central Valley to the Carquinez Strait and then into western Solano and southern Napa County (BAAQMD, In Your Community: Napa County, April 2016)

The impacts associated with implementation of the project were evaluated consistent with guidance provided by BAAQMD. Ambient air quality standards have been established by state and federal environmental agencies for specific air pollutants most pervasive in urban environments. These pollutants are referred to as criteria air pollutants because the standards established for them were developed to meet specific health and welfare criteria set forth in the enabling legislation. The criteria air pollutants emitted by development, traffic and other activities anticipated under the proposed development include ozone, ozone precursors oxides of nitrogen and reactive organic gases (NOx and ROG), carbon monoxide (CO), nitrogen dioxide (NO₂), and suspended particulate matter (PM₁₀ and PM_{2.5}). Other criteria pollutants, such as lead and sulfur dioxide (SO₂), would not be substantially emitted by the proposed development or traffic, and air quality standards for them are being met throughout the Bay Area.

BAAQMD has not officially recommended the use of its thresholds in CEQA analyses and CEQA ultimately allows lead agencies the discretion to determine whether a particular environmental impact would be considered significant, as evidenced by scientific or other factual data. BAAQMD also states that lead agencies need to determine appropriate air quality thresholds to use for each project they review based on substantial evidence that they include in the administrative record of the CEQA document. One resource BAAQMD provides as a reference for determining appropriate thresholds is the *California Environmental Quality Act Air Quality Guidelines* developed by its staff in 2010 and as updated through May 2017. These guidelines outline substantial evidence supporting a variety of thresholds of significance.

As mentioned above, in 2010, the BAAQMD adopted and later incorporated into its 2011 CEQA Guidelines project screening criteria (Table 3-1 – Operational-Related Criteria Air Pollutant and Precursors Screening Level Sizes) and thresholds of significance for air pollutants, which have now been updated by BAAQMD through May 2017. The existing building includes approximately 2,246 sq. ft. of floor area devoted to hospitality and administrative uses (including a 825 sq. ft. tasting room) and approximately 7,701 sq. ft. of floor area devoted to production. When compared to the BAAQMD's screening criteria of 541,000 sf for general industrial and 47,000 sf for high quality restaurant for NOx (oxides of nitrogen), the project would not significantly impact air quality and does not require further study (BAAQMD CEQA Guidelines, May 2017 Pages 3-2 & 3-3.) The project would contribute an insignificant amount of air pollution and would not result in a conflict or obstruction of an air quality plan. (Please note: a high quality restaurant is considered comparable to a winery tasting room for purposes of evaluating air pollutant emissions, but grossly overstates emissions associated with other portions of a winery, such as office, barrel storage and production, which generate fewer vehicle trips. Therefore, a general light industry comparison has also been used for other such uses.)

The project falls well below the screening criteria as noted above, and consequently will not significantly affect air quality individually or contribute considerably to any cumulative air quality impacts.

c. In the short term, potential air quality impacts are most likely to result from earthmoving and construction activities required for project construction. Earthmoving and construction emissions would have a temporary effect; consisting mainly of dust generated during grading and other construction activities and exhaust emissions from construction related equipment and vehicles. If grading were to result in off or on-haul of soils, these potential construction impacts would be temporary in nature and subject to standard conditions of approval from the Engineering Division as part of the grading permit or building permit review process.

The Air District recommends incorporating feasible control measures as a means of addressing construction impacts. If the proposed project adheres to these relevant best management practices identified by the Air District and the County's standard conditions of project approval, construction-related impacts will not expose sensitive receptors to substantial pollutant concentrations and are considered less than significant:

7.1 SITE IMPROVEMENT

c. AIR QUALITY

During all construction activities the permittee shall comply with the most current version of BAAQMD Basic Construction Best Management Practices including but not limited to the following, as applicable:

- 1. Post a publicly visible sign with the telephone number and person to contact at the lead agency regarding dust complaints. The BAAQMD's phone number shall also be visible.
- 2. Water all exposed surfaces (e.g., parking areas, staging areas, soil piles, grading areas, and unpaved access roads) two times per day.
- 3. Cover all haul trucks transporting soil, sand, or other loose material off-site.
- 4. Remove all visible mud or dirt tracked onto adjacent public roads by using wet power vacuum street sweepers at least once per day. The use of dry power sweeping is prohibited.
- 5. All vehicle speeds on unpaved roads shall be limited to 15 mph.
- 6. All roadways, driveways, and sidewalks to be paved shall be completed as soon as possible. Building pads shall be laid as soon as possible after grading unless seeding or soil binders are used.
- 7. Idling times shall be minimized either by shutting off equipment when not in use or reducing the maximum idling time to five (5) minutes (as required State Regulations). Clear signage shall be provided for construction workers at all access points.

All construction equipment shall be maintained and properly tuned in accordance with manufacturer's specifications. All equipment shall be checked by a certified visible emissions evaluator. Any portable engines greater than 50 horsepower or associated equipment operated within the BAAQMD's jurisdiction shall have either a California Air Resources Board (ARB) registration Portable Equipment Registration Program (PERP) or a BAAQMD permit. For general information regarding the certified visible emissions evaluator or the registration program, visit the ARB FAQ http://www.arb.ca.gov/portable/perpfaq_04-16-15.pdf or the PERP website http://www.arb.ca.gov/portable/portable.htm

Furthermore, while earthmoving and construction on the site will generate dust particulates in the short-term, the impact would be less than significant with dust control measures as specified in Napa County's standard condition of approval relating to dust:

7.1. SITE IMPROVEMENT

b. DUST CONTROL

Water and/or dust palliatives shall be applied in sufficient quantities during grading and other ground disturbing activities on-site to minimize the amount of dust produced. Outdoor construction activities shall not occur when average wind speeds exceed 20 mph.

d. While the Air District defines public exposure to offensive odors as a potentially significant impact, wineries are not known operational producers of pollutants capable of causing substantial negative impacts to sensitive receptors. The nearest residence is approximately 392 feet to the west of the proposed outdoor patio and approximately 472 feet west of the existing winery building. Construction-phase pollutants would be reduced to a less than significant level by the above-noted standard condition of approval. The project would not create pollutant concentrations or objectionable odors affecting a substantial number of people. Impacts would be less than significant.

IV.	BIC	LOGICAL RESOURCES. Would the project:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporation	Less Than Significant Impact	No Impact		
	a)	Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or the U.S. Fish and Wildlife Service?						
	b)	Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?			\boxtimes			
	c)	Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, Coastal, etc.) through direct removal, filling, hydrological interruption, or other means?						
	d)	Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?						
	e)	Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?				\boxtimes		
	f)	Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?				\boxtimes		
Discus	sion:							
	According to the Napa County Environmental Resource Maps (based on the following layers – water bodies, vernal pool species), no blue line streams traverse the site and vernal pools and wetlands are not present. All proposed improvements would occur within a previously disturbed area that is not a wildlife corridor. Therefore, project activities would not interfere with the movement of any native resident or migratory fish or wildlife species or with their corridors or nursery sites. No impacts would occur							

This project would not interfere with any ordinances protecting biological resources. There are no tree preservation ordinances in effect in the County. The proposed project would not conflict with the provisions of an adopted Habitat Conservation Plans, Natural Community Conservation Plans or other approved local, regional or state habitat conservation plans because there are no plans applicable to the

subject site. No impacts would occur.

<u>Mitigation Measure</u>s: None required.

e/f.

V.	CU	LTURAL RESOURCES. Would the project:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporation	Less Than Significant Impact	No Impact
	a)	Cause a substantial adverse change in the significance of a historical resource pursuant to CEQA Guidelines §15064.5?			\boxtimes	
	b)	Cause a substantial adverse change in the significance of an archaeological resource pursuant to CEQA Guidelines §15064.5?				
	c)	Disturb any human remains, including those interred outside of dedicated cemeteries?			\boxtimes	

a/b. According to Napa County Environmental Sensitivity Maps (Archaeological Resources Layer, historical site, points & lines), no known historically sensitive sites or structures, archaeological or paleontological resources, sites or unique geological features have been identified within the project site. There is no information in the County's files that would indicate that there is a potential for occurrence of these resources. The site has been previously developed with the existing winery, vineyards and a residence that has since been demolished. It is therefore not anticipated that any cultural resources are present on the site, and the potential for impact is considered less-than-significant. However, if resources are found during grading of the project, construction of the project is required to cease, and a qualified archaeologist will be retained to investigate the site in accordance with the following standard condition of approval that will be imposed on the project:

7.2 ARCHEOLOGICAL FINDING

In the event that archeological artifacts or human remains are discovered during construction, work shall cease in a 50-foot radius surrounding the area of discovery. The permittee shall contact the PBES Department for further guidance, which will likely include the requirement for the permittee to hire a qualified professional to analyze the artifacts encountered and to determine if additional measures are required.

If human remains are encountered during project development, all work in the vicinity must be halted, and the Napa County Coroner informed, so that the Coroner can determine if an investigation of the cause of death is required, and if the remains are of Native American origin, the permittee shall comply with the requirements of Public Resources Code Section 5097.98.

c. No human remains have been encountered on the property and no information has been encountered that would indicate that construction of this project would encounter human remains. Construction activities would occur on previously disturbed portions of the site. However, if resources are found during project grading, construction of the project is required to cease, and a qualified archaeologist would be retained to investigate the site in accordance with standard condition of approval noted above. Impacts would be less than significant.

VI.	ENI	ERG	Y. Would the project:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporation	Less Than Significant Impact	No Impact
	a)	was	sult in potentially significant environmental impact due to steful, inefficient or unnecessary consumption of energy purces during project construction or operation?			\boxtimes	
	b)		nflict with or obstruct a state or local plan for renewable energy energy efficiency?				
Discu	ssion:						
a.		teful,	sed project would comply with Title 24 energy use requirements an inefficient or unnecessary consumption of energy resources duri- cant.				
b.			ed project would not conflict with the provisions of a state or local ps applicable to the subject site. No impacts would occur.	olan for renewab	le energy or ener	gy efficiency be	cause there
<u>Mitiga</u>	<u>ition Me</u>	<u>asure</u>	<u>es</u> : None required.				
VII.	GE	OLO(GY AND SOILS. Would the project:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporation	Less Than Significant Impact	No Impact

VIII.	GR	EENHOUSE GAS EMISSIONS. Would the project:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporation	Less Than Significant Impact	No Impact
	a)	Generate a net increase in greenhouse gas emissions in excess of applicable thresholds adopted by the Bay Area Air Quality Management District or the California Air Resources Board which may have a significant impact on the environment?				
	b)	Conflict with a county-adopted climate action plan or another applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?				

Napa County has been working to develop a Climate Action Plan (CAP) for several years. In 2012, a Draft CAP (March 2012) was recommended using the emissions checklist in the Draft CAP, on a trial basis, to determine potential greenhouse gas (GHG) emissions associated with project development and operation. At the December 11, 2012, Napa County Board of Supervisors (BOS) hearing, the BOS considered adoption of the proposed CAP. In addition to reducing Napa County's GHG emissions, the proposed plan was intended to address compliance with CEQA for projects reviewed by the County and to lay the foundation for development of a local offset program. While the BOS acknowledged the plan's objectives, the BOS requested that the CAP be revised to better address transportation-related greenhouse gas, to acknowledge and credit past accomplishments and voluntary efforts, and to allow more time for establishment of a cost-effective local offset program. The Board also requested that best management practices be applied and considered when reviewing projects until a revised CAP is adopted to ensure that projects address the County's policy goal related to reducing GHG emissions.

In July 2015, the County re-commenced preparation of the CAP to: i) account for present day conditions and modeling assumptions (such as but not limited to methods, emission factors, and data sources), ii) address the concerns with the previous CAP effort as outlined above, iii) meet applicable State requirements, and iv) develop a functional and legally defensible CAP. On April 13, 2016 the County, as the part of the first phase of development and preparation of the CAP, released Final Technical Memorandum #1: 2014 Greenhouse Gas Emissions Inventory and Forecast, April 13, 2016. This initial phase included: i) updating the unincorporated County's community-wide GHG emissions inventory to 2014, and ii) preparing new GHG emissions forecasts for the 2020, 2030, and 2050 horizons. Additional information on the County CAP can be obtained at the Napa County Department of Planning, Building and Environmental Services or http://www.countyofnapa.org/CAP/.

a/b. Overall increases in Greenhouse Gas (GHG) emissions in Napa County were assessed in the Environmental Impact Report (EIR) prepared for the Napa County General Plan Update and certified in June 2008. GHG emissions were found to be significant and unavoidable in that document, despite the adoption of mitigation measures incorporating specific policies and action items into the General Plan. Consistent with these General Plan action items, Napa County participated in the development of a community-wide GHG emissions inventory and "emission reduction framework" for all local jurisdictions in the County in 2008-2009. This planning effort was completed by the Napa County Transportation and Planning Agency in December 2009, and served as the basis for development of a refined inventory and emission reduction plan for unincorporated Napa County.

In 2011, the Bay Area Air Quality Management District (BAAQMD) released California Environmental Quality Act (CEQA) Project Screening Criteria and Significance of Thresholds [1,100 metric tons per year (MT) of carbon dioxide and carbon dioxide equivalents (CO2e)]. This threshold of significance is appropriate for evaluating projects in Napa County. During our ongoing planning effort, the County requires project applicants to consider methods to reduce GHG emissions consistent with Napa County General Plan Policy CON-65(e). (Note: Pursuant to State CEQA Guidelines Section 15183, because this initial study assesses a project that is consistent with an adopted General Plan for which an environmental impact report (EIR) was prepared, it appropriately focuses on impacts which are "peculiar to the project," rather than the cumulative impacts previously assessed.) For the purposes of this analysis potential GHG emissions associated with winery 'construction' and 'development' and with 'ongoing' winery operations have been discussed.

GHGs are the atmospheric gases whose absorption of solar radiation is responsible for the greenhouse effect, including carbon dioxide, methane, ozone, and the fluorocarbons, that contribute to climate change (a widely accepted theory/science explain human effects on the atmosphere). Carbon Dioxide (CO2) gas, the principal greenhouse gas (GHG) being emitted by human activities, and whose concentration in the atmosphere is most affected by human activity, also serves as the reference gas to compare other greenhouse gases. Agricultural sources of carbon emissions include forest clearing, land-use changes, biomass burning, and farm equipment and management activity emissions (http://www.climatechange.ca.gov/glossary/letter_c.html). Equivalent Carbon Dioxide (CO2e) is the most commonly reported type of GHG emission and a way to get one number that approximates total emissions from all the different gasses that contribute to GHG

(BAAMD CEQA Air Quality Guidelines, May 2017). In this case, carbon dioxide (CO2) is used as the reference atom/compound to obtain atmospheric carbon CO2 effects of GHG. Carbon stocks are converted to carbon dioxide equivalents (CO2e) by multiplying the carbon total by 44/12 (or 3.67), which is the ratio of the atomic mass of a carbon dioxide molecule to the atomic mass of a carbon atom (http://www.nciasi2.org/COLE/index.html)

One time "Construction Emissions" associated with the project include: emissions associated with the energy used to develop and prepare the project area, construction, and construction equipment and worker vehicle trips (hereinafter referred to as Equipment Emissions). These emissions also include underground carbon stocks (or Soil carbon) associated with any existing vegetation that is proposed to be removed. As previously stated, this project does not include the construction of any new buildings, but does include the development of a 3,659 sq. ft. uncovered patio, new parking spaces, as well as some driveway and landscaping improvements.

In addition to the one time Construction Emissions, "Operational Emissions" of the winery are also considered and include: i) any reduction in the amount of carbon sequestered by existing vegetation that is removed as part of the project compared to a "no project" scenario (hereinafter referred to as Operational Sequestration Emissions); and ii) ongoing emissions from the energy used to maintain and operate the winery, including vehicle trips associated with employee and visitor trips (hereinafter referred to as Operational Emissions). See Section XVI, Transportation/Traffic, for anticipated number of operational trips. Operational Emissions from the proposed winery would be the primary source of emissions over the long-term when compared to one time construction emissions.

As discussed in the Air Quality section of this Initial Study, in 2010, the BAAQMD adopted and later incorporated into its 2011 CEQA Guidelines project screening criteria (Table 3-1 – Criteria Air Pollutants and Precursors & GHG Screening Level Sizes) and thresholds of significance for air pollutants, including GHG emissions, which have now been updated by BAAQMD through May 2017. There is approximately 2,246 sq. ft. of existing floor area devoted to hospitality and administrative uses and approximately 7,701 sq. ft. of floor area devoted to production within the existing building. When compared to the BAAQMD's GHG screening criteria of 121,000 sq. ft. for general industrial and 9,000 sq. ft. for high quality restaurant, the project was determined not to exceed the 1,100 MT of CO2e/yr GHG threshold of significance.

Furthermore, the applicant proposes to incorporate the following additional GHG reduction methods: electric vehicle charging station(s). The existing winery has already implemented the following GHG reduction practices: generation of on-site renewable energy, alternative fuels and electrical vehicle in fleet, a VMT reduction plan, and electrical vehicle charging stations. The winery has implemented energy conserving lighting, bicycle incentives, use of recycled water, use of water efficient fixtures, low impact development, installation of water efficient landscaping; recycling 75% of all waste, implementation of a sustainable purchasing and shipping program, building orientation that optimizes natural heating, cooling and day lighting of interior spaces, limited the amount of grading and tree removal, and has designed the building to qualify as LEED Silver. The applicant also proposes to implement a number of other practices with un-measured GHG reduction potential as outlined in the application submittal materials.

The proposed project has been evaluated against the BAAQMD thresholds and determined that the project would not exceed the 1,100 MT/yr of CO2e. GHG Emission reductions from local programs and project level actions, such as application of the Cal Green Building Code and tightened vehicle fuel efficiency standards. As indicated above, the County is currently preparing a CAP and as the part of the first phase of development and preparation of the CAP has released Final Technical Memorandum #1 (2014 Greenhouse Gas Emissions Inventory and Forecast, April 13, 2016). Table 1 of the Technical Memorandum indicates that 2% of the County's GHG emissions in 2014 were a result of land use change. The increase in emissions expected as a result of the project would be relatively modest and the project is in compliance with the County's efforts to reduce emissions as described above. For these reasons, project impacts related to GHG emissions are considered less than significant.

iviillualion	Measures:	ионе	reaumea.

IX.	НА	ZARDS AND HAZARDOUS MATERIALS. Would the project	Potentially Significant Impact	Less Than Significant With Mitigation Incorporation	Less Than Significant Impact	No Impact
	a)	Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?				
	b)	Create a significant hazard to the public or the environment through reasonable foreseeable upset and accident conditions involving the release of hazardous materials into the environment?				
	c)	Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?			\boxtimes	
	d)	Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?				
	e)	For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?				
	f)	Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?			\boxtimes	
	g)	Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wild-land fires?				

- a. The proposed project would not involve the transport of hazardous materials other than those small amounts utilized in typical winery operations. A business plan would be filed with the Environmental Health Division should hazardous materials reach reportable levels. Impacts would be less than significant.
- b. Hazardous materials such as diesel, maintenance fluids, and paints would be used onsite during construction. Should they be stored onsite, these materials would be stored in secure locations to reduce the potential for upset or accident conditions. The proposed project consists of a modification to an existing winery that would not be expected to use any substantial quantities of hazardous materials. Therefore, it would not be reasonably foreseeable for the proposed project to create upset or accident conditions that involve the release of hazardous materials into the environments. Impacts would be less than significant.
- c. There are no schools located within one-quarter mile from the proposed winery building. Stonebridge Charter School (K-8) is a little less than a mile to the southeast.
- d. Based on a search of the California Department of Toxic Substances Control database, the project site does not contain any known EPA National Priority List sites, State response sites, voluntary cleanup sites, or any school cleanup sites. No impact would occur as the project site is not on any known list of hazardous materials sites.
- e. No impact would occur as the project site is not located within an airport land use plan or within two miles of a public airport or public use airport.
- f. The driveway that serves the project has been designed to comply with County standards and access to the building has been designed to accommodate fire apparatus and large trucks. The project has been reviewed by the County Fire Department and Engineering Services Division and found acceptable as conditioned. Therefore, the design of the project will not negatively impact or hinder emergency vehicle access.

g. The project would not increase exposure of people and/or structures to a significant loss, injury or death involving wild land fires. The project would comply with current California Department of Forestry and California Building Code requirements for fire safety. In addition, the project is located within an urbanized area as identified in the in the Land Use Element of the General Plan. Impacts would be less than significant.

Mitigation Measures: None required.

X.	НҮ[OROL	OGY AND WATER QUALITY. Would the project:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporation	Less Than Significant Impact	No Impact
	a)	requ	ate any water quality standards or waste discharge irements or otherwise substantially degrade surface or ndwater quality?				
	b)	subs	Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?				
	c)	inclu	Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces which would:				
		i)	result in substantial erosion or siltation on- or off-site?			\boxtimes	
		ii)	substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site?			\boxtimes	
		iii)	create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?				
		iv)	impede or redirect flood flows?			\boxtimes	
	d)		ood hazard, tsunami, or seiche zones, risk release of pollutants to project inundation?				
	e)		flict with or obstruct implementation of a water quality control or sustainable groundwater management plan?				\boxtimes

Discussion:

On January 14, 2014, Governor Jerry Brown declared a drought emergency in the state of California. That declaration was followed up on April 1, 2015, when the Governor directed the State Water Resources Control Board to implement mandatory water reductions in cities and towns across California to reduce water usage by 25 percent. These water restrictions do not apply to agricultural users. However, on April 7, 2017, Governor Jerry Brown signed an executive order lifting California's drought emergency in all but four counties (Fresno, Kings, Tulare and Tuolumne). The County of Napa had not adopted or implemented any additional mandatory water use restrictions. The County requires all discretionary permit applicants to complete necessary water analyses in order to document that sufficient water supplies are available for the proposed project and to implement water saving measures to prepare for periods of limited water supply and to conserve limited groundwater resources.

In general, recent studies have found that groundwater levels in the Napa Valley Floor exhibit stable long-term trends with a shallow depth to

water. Historical trends in the Milliken-Sarco-Tulucay (MST) area, however, have shown increasing depths to groundwater, but recent stabilization in many locations. Groundwater availability, recharge, storage and yield are not consistent across the County. More is known about the resource where historical data have been collected. Less is known in areas with limited data or unknown geology. In order to fill existing data gaps and to provide a better understand of groundwater resources in the County, the Napa County Groundwater Monitoring Plan recommended 18 Areas of Interest (AOIs) for additional groundwater level and water quality monitoring. Through the well owner and public outreach efforts of the (GRAC) approximately 40 new wells have been added to the monitoring program within these areas. Groundwater Sustainability Objectives were developed and recommended by the GRAC and adopted by the Board. The recommendations included the goal of developing sustainability objectives, provided a definition, explained the shared responsibility for Groundwater Sustainability and the important role monitoring as a means to achieving groundwater sustainability.

In 2009 Napa County began a comprehensive study of its groundwater resources to meet identified action items in the County's 2008 General Plan update. The study, by Luhdorff and Scalmanini Consulting Engineers (LSCE), emphasized developing a sound understanding of groundwater conditions and implementing an expanded groundwater monitoring and data management program as a foundation for integrated water resources planning and dissemination of water resources information. The 2011 baseline study by LSCE, which included over 600 wells and data going back over 50 years, concluded that "the groundwater levels in Napa County are stable, except for portions of the MST district." Most wells elsewhere within the Napa Valley floor with a sufficient record indicate that groundwater levels are more affected by climatic conditions, are within historical levels, and seem to recover from dry periods during subsequent wet or normal periods. The LSCE Study also concluded that, on a regional scale, there appear to be no current groundwater quality issues except north of Calistoga (mostly naturally occurring boron and trace metals) and in the Carneros region (mostly salinity). The subject property is located within the Carneros region. According to the Napa County Comprehensive Groundwater Monitoring Program 2018 Annual Report and CASGEM Update prepared by LSCE in March 2019, groundwater levels in the Carneros region have been stable to increasing in 10 of 12 currently monitored wells. In 2018, groundwater levels were above levels measured in 2014 and 2015 in the two wells that showed groundwater level declines since monitoring began in 2011 and 2012.

Thresholds for water use have been established by the Napa County Department of Public Works, using reports by the United States Geological Survey (USGS), the GRAC recommendations, and the LSCE reports. These reports are the result of water resources investigations performed by the USGS in cooperation with the Napa County Flood Control and Water Conservation District and LSCE. Any project that reduces water usage or any water usage that is at or below the established threshold is assumed not to have a significant effect on groundwater levels. As noted above, the project site is within the Carneros region, or an area otherwise categorized as "all other areas" by the County WAA Guidance Document. Property located within "all other areas" requires a Tier 2 analysis which is intended to estimate annual groundwater recharge during average and dry years. A Tier 2 analysis was completed by CMP Civil Engineering, dated January 28, 2020 (revised). According to the analysis, the calculated groundwater recharge rate for the property is 0.76 acre-feet of water a year per acre of land or annual recharge rate of 9.3 acre-feet per year for the project site.

a/b. The project would not violate any water quality standards or waste discharge requirements nor substantially deplete local groundwater supplies. According to the Wastewater Feasibility Report prepared by Theodore J. Walker, dated December 28, 2019, the project site and existing systems have adequate disposal capacity to serve the project. The Division of Environmental Health reviewed this report and concurred with its findings.

The facility's domestic water system is classified as transient, non-community and is owned and operated by the winery. Water sources for the project site consist of two groundwater wells. One well (Winery well) will serve as the main groundwater source for the public water system providing water for the existing winery. The second well (Ag well) is used as the main groundwater source for the vineyards, but will serve as a backup water source for the winery in case of an emergency. According to the WAA prepared by CMP Civil Engineering, the Winery well was constructed in 2005, has a depth of 450-feet with a 52-foot seal, and a yield of 4.0 gallons per minute (gpm) for an 8-hour test. The Ag well was also constructed in 2005, has a depth of 210 feet with a 52-foot seal, and a yield of 10 gpm for an 8-hour test.

As noted above, the applicant submitted a Tier 2 Water Availability Analysis (WAA) completed by CMP Civil Engineering. The WAA indicated that the projected overall water demand for the project site will be 5.13 AF/YR representing a 0.30 AF/YR increase of the existing water demand of 4.83 AF/YR. The parcel water demand can be met with the existing project well. Therefore, the impacts from the project would be less than significant and no further analysis is needed. Below is a table that details each source of existing and proposed groundwater use:

Usage Type	Existing Usage	Proposed Usage
Vineyard Irrigation	3.93	3.93
Winery		
Process	0.46	0.46
Domestic Employees/Visitors	0.15	0.45
Recycled Process Wastewater	-0.46	-0.46
Residential Water Use	0.75	0.75
Net Use (Acre-ft per Year)	4.83	5.13

The estimated groundwater demand of 5.13 AF/YR, represents an increase of 0.30 AF/YR over the existing condition. The winery, as part of its entitlement would include the County's standard condition of approval requiring well monitoring as well as the potential to modify/alter permitted uses on site should groundwater resources become insufficient to supply the use.

In response to regional drought and the general Statewide need to protect groundwater resources, the Governor enacted new legislation requiring local governments to monitor and management groundwater resources. Napa County's prior work on the Napa Valley Groundwater Management Plan provides a strong foundation for Napa County to comply with this State mandated monitoring and management objective. As a direct result, the project site is now subject to this new legislation requiring local agencies to monitor groundwater use. Assembly Bill - AB 1739 by Assembly member Roger Dickinson (D-Sacramento) and Senate Bills 1168 and 1319 by Senator Fran Pavley (D-Agoura Hills) establish a framework for sustainable, local groundwater management for the first time in California history. The legislation requires local agencies to tailor sustainable groundwater plans to their regional economic and environmental needs. The legislation prioritizes groundwater basin management Statewide, which includes the Napa Valley/Napa River Drainage Basin, and sets a timeline for implementation of the following:

By 2017, local groundwater management agencies must be identified;

By 2020, overdrafted groundwater basins must have sustainability plans;

By 2022, other high and medium priority basins not currently in overdraft must have sustainability plans; and

By 2040, all high and medium priority groundwater basins must achieve sustainability.

The State has classified the Napa River Drainage Basin as a medium priority resource. Additionally, the legislation provides measurable objectives and milestones to reach sustainability and a State role of limited intervention when local agencies are unable or unwilling to adopt sustainable management plans. Napa County supports this legislation and has begun the process of developing a local groundwater management agency which is anticipated to be in place and functioning within the timeline prescribed by the State.

The proposed project would result in an increase on the demand of ground water supplies. Generally, a well interference analysis is conducted as part of a Tier 2 analysis to review the project's potential impacts on neighboring wells within 500 feet from the property wells. The WAA guidelines establish a 10-foot drawdown as the criteria to determine significant adverse effects. The WAA guidelines also indicate that wells with a flow rate of approximately 10-30 gallons per minute (gpm) would not exceed the 10-foot drawdown criteria. As noted above, the Winery well and Ag well have flow rates of 4.0 gpm and 10.0 gpm, respectively. Because of the low flow rates of the two wells onsite, no significant drawdown impact is anticipated for wells on adjacent parcels.

- c. The project would not substantially alter the drainage pattern on site or cause a significant increase in erosion or siltation on or off the project site. Improvement plans prepared prior to the issuance of grading or building permits would ensure that the proposed project does not increase runoff flow rate or volume as a result of project implementation. General Plan Policy CON-50 c) requires discretionary projects, including this project, to meet performance standards designed to ensure peak runoff in 2-, 10-, 50-, and 100-year events following development is not greater than predevelopment conditions. The preliminary grading and drainage plan has been reviewed by the Engineering Division. The proposed project would implement standard stormwater quality treatment controls to treat runoff prior to discharge from the project site. The incorporation of these features into the project would ensure that the proposed project would not create substantial sources of polluted runoff. In addition, the proposed project does not have any unusual characteristics that create sources of pollution that would degrade water quality. Impacts would be less than significant.
- d. The site lies outside the boundaries of the 100 and 500 year flood hazard boundaries. The parcel is not located in an area that is subject to inundation by tsunamis, seiches, or mudflows. No impacts would occur.
- e. The proposed project would not conflict with a water quality control plan or sustainable groundwater management plan. No impacts would occur.

XI.	LA	ND USE AND PLANNING. Would the project:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporation	Less Than Significant Impact	No Impact
	a)	Physically divide an established community?				\boxtimes
	b)	Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?				
Discu	ission:					
a-b.	applicato use has a	roject would not result in the division of an established community. The able regulations. The subject parcel is located in the AW zoning district, permit approval. The use of the property for the "fermenting and processing of grape juice into wine" (NCC §18.08.640) supports the economic viability of agriculture within the county consistent with General Plan Agricultural Preservation and Land Use Policy AG/LU-4 ("The County will reserve agricultural lands for agricultural use including lands used for grazing and watershed/ open space...") and General Plan Economic Development Policy E-1 (The County's economic development will focus on ensuring the continued viability of agriculture...).

XII.	MINERAL RESOURCES. Would the project:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporation	Less Than Significant Impact	No Impact
	a) Result in the loss of availability of a known mineral rewould be of value to the region and the residents of the				\boxtimes
	b) Result in the loss of availability of a locally-important resource recovery site delineated on a local general plan or other land use plan?				

a/b. Historically, the two most valuable mineral commodities in Napa County in economic terms have been mercury and mineral water. More recently, building stone and aggregate have become economically valuable. Mines and Mineral Deposits mapping included in the Napa County Baseline Data Report (Mines and Mineral Deposits, BDR Figure 2-2) indicates that there are no known mineral resources nor any locally important mineral resource recovery sites located on the project site. No impacts would occur.

Mitigation Measures: None required.

XIII.	NO	ISE. Would the project result in:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporation	Less Than Significant Impact	No Impact
	a)	Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?			\boxtimes	
	b)	Generation of excessive groundborne vibration or groundborne noise levels?			\boxtimes	
	c)	For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?				

Discussion:

The project would result in a temporary increase in noise levels during construction of a left-turn lane on State Route 29 at the project's primary access driveway, construction of the new parking areas near the existing winery building, and expansion of the existing cave. Construction activities would be limited to daylight hours using properly muffled vehicles. Noise generated during this time is not anticipated to be significant. As such, the project would not result in potentially significant temporary construction noise impacts or operational impacts. Because the nearest residence is approximately 392 feet west of the proposed outdoor patio, there is a low potential for impacts related to construction noise to result in a significant impact. Further, construction activities would occur during the period of 7am-7pm on weekdays, during normal hours of human activity. All construction activities would be conducted in compliance with the Napa County Noise Ordinance (Napa County Code Chapter 8.16). The proposed project would not result in long-term significant construction noise impacts. Conditions of approval identified below would require construction activities to be limited to daylight hours, vehicles to be muffled, and backup alarms adjusted to the lowest allowable levels. Impacts would be less than significant.

7.3. CONSTRUCTION NOISE

Construction noise shall be minimized to the greatest extent practical and feasible under State and local safety laws, consistent with construction noise levels permitted by the General Plan Community Character Element and the County Noise Ordinance. Construction equipment muffling and hours of operation shall be in compliance with the County Code. Equipment shall be shut down when not in use. Construction equipment shall normally be staged, loaded, and unloaded on the project site, if at all practicable. If project terrain or access road conditions require construction equipment to be staged, loaded, or unloaded off the project site (such as on a neighboring road or at the base of a hill), such activities shall only occur daily between the hours of 8 am to 5 pm.

The proposed project involves changes to the approved marketing program with the largest events hosting up to 150 guests, twice per year and 55 guests eight times per year as opposed to 30 guests 10 times per year currently allowed. Marketing activities will continue to occur both inside and outside the winery building. The outdoor areas are between the winery and an existing barn, west of the winery. There would be no amplified music during the events.

Additional regulations contained within County Code Chapter 8.16 establish exterior noise criteria for various land uses in the County. As described in Project Setting, above, land uses that surround the proposed project site are predominantly agricultural (vineyard and winery) but include low density residential and limited commercial uses; of these land uses, the residential land use is considered the most sensitive to noise. Based on the standards in County Code section 8.16.070, noise levels, measured at the exterior of a residential structure or residential use on a portion of a larger property, may not exceed 50 decibels for more than half of any hour in the window of daytime hours (7:00 a.m. to 10:00 p.m.) within which the applicant proposes to conduct events. Noise impacts of the proposed project would be considered bothersome and potentially significant if sound generated by it had the effect of exceeding the standards in County Code more than 50 percent of the time (i.e., more than 50 decibels for more than 30 minutes in an hour for a residential use). Noise from winery operations is generally limited and intermittent, meaning the sound level can vary during the day and over the course of the year, depending on the activities at the winery. The primary noise-generating activities are equipment associated with wineries including refrigeration equipment, bottling equipment, barrel washing, de-stemmers and press activities occurring during the harvest crush season, delivery trucks, and other vehicles. The Napa County General Plan EIR indicates the average, or equivalent, sound level (Leg) for winery activities is 51dBA in the morning and 41dBA in the afternoon. Audibility of a new noise source and/or increase in noise levels within recognized acceptable limits are not usually considered to be significant noise impacts, but these concerns should be addressed and considered in the planning and environmental review processes. Typical winery operations would occur between 8:00 a.m. and 6:00 p.m. (excluding harvest) with marketing events generally occurring between 11:00 AM and 10:00 PM.

The nearest off-site residence in proximity to the proposed outdoor patio on the west side of the winery, between the winery and the barn where outdoor marketing events would occur, is approximately 392 feet to the west. Noise sampling performed under County authority (RGD Acoustics, November 16, 2015), as part of the analysis for the Bell Winery use permit modification (P13-00055), measured sound from an 85-person event using a meter placed 123 feet from the sound source (event). Measurements taken from that sound meter indicated that sound from the event exceeded 56 decibels 50 percent of the time. The studied event had fewer attendees than the largest, 150-person event proposed by the applicant, and so the noise level measured from the Bell Winery event is adjusted upward by two decibels (based on a standard rate of 3 dB per doubling of number of noise sources) to an estimated 58 decibels exceeded 50 percent of the time, to estimate the noise level from the largest marketing event of the proposed project. Even with adjustment, these levels are considered to be conservative given that the Bell Winery event had a live music act included in its event, and there would be no outdoor amplified sound at the proposed winery. The noise study further states that sound levels are reduced with distance in accordance with the "inverse square law", which yields a six (6) dB sound reduction for each doubling of the distance from the source. Thus, using the Bell Winery study as a model, and applying a six-decibel reduction per doubling of distance from the noise source, it is anticipated that exterior noise experienced at the nearest residence 350 feet to the west of the proposed winery patio (estimated 49 decibels for half of the event duration) would not exceed the County Code standard of 50 decibels during 50 percent of daytime hours.

Under the proposed project, the largest event that would occur on the parcel would have an attendance of no more than 150 people, and all events would end by 10:00 p.m., with clean-up conducted afterwards. Continuing enforcement of Napa County's Noise Ordinance by the Division of Environmental Health and the Napa County Sheriff, including the prohibition against amplified music, should further ensure that marketing events and other winery activities do not create a significant noise impact. Events and non-amplified music, excluding quiet clean-up are required to finish by 10:00 p.m. Amplified music or sound systems would not be permitted for outdoor events as identified in standard Condition of Approval 4.10 below. Temporary events would be subject to County Code Chapter 5.36 which regulates proposed temporary events. The proposed project would not result in long-term significant permanent noise impacts.

4.10 AMPLIFIED MUSIC

There shall be no amplified sound system or amplified music utilized outside of approved, enclosed, winery buildings.

c. The proposed winery would not expose people to excessive noise levels associated with air traffic. No private landing facility is proposed with the requested modification, and the winery is neither within the boundaries of an airport land use compatibility planning area nor within two miles of any public or private airport or airstrip.

XIV.	PO	PULATION AND HOUSING. Would the project:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporation	Less Than Significant Impact	No Impact
	a)	Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?			\boxtimes	
	b)	Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?				\boxtimes

a. Proposed staffing for the project includes increasing the number of full-time employees from two to five and part-time employees from two to four as part of this project. The Association of Bay Area Governments' *Projections 2003* figures indicate that the total population of Napa County is projected to increase some 23% by the year 2030 (*Napa County Baseline Data Report*, November 30, 2005). Additionally, the County's *Baseline Data Report* indicates that total housing units currently programmed in county and municipal housing elements exceed ABAG growth projections by approximately 15%. The 20 additional full-time employees which are part of this project could lead to minor population growth in Napa County. Relative to the County's projected low to moderate growth rate and overall adequate programmed housing supply that population growth does not rise to a level of environmental significance. In addition, the project would be subject to the County's housing impact mitigation fee, which provides funding to meet local housing needs.

Cumulative impacts related to population and housing balance were identified in the 2008 General Plan EIR. As set forth in Government Code §65580, the County of Napa must facilitate the improvement and development of housing to make adequate provision for the housing needs of all economic segments of the community. Similarly, CEQA recognizes the importance of balancing the prevention of environment damage with the provision of a "decent home and satisfying living environment for every Californian." (See Public Resources Code §21000(g).) The 2008 General Plan sets forth the County's long-range plan for meeting regional housing needs, during the present and future housing cycles, while balancing environmental, economic, and fiscal factors and community goals. The policies and programs identified in the General Plan Housing Element function, in combination with the County's housing impact mitigation fee, to ensure adequate cumulative volume and diversity of housing. Cumulative impacts on the local and regional population and housing balance would be less than significant.

The proposed use permit modification would facilitate ongoing operation of an existing winery. Other than new on-site parking areas, no new infrastructure is proposed that might induce growth by extending service outside of the boundaries of any of the winery owner's properties.

b. No existing housing or people would be displaced as a result of the project. Therefore, the project would not displace substantial numbers of existing housing or numbers of people necessitating the construction of replacement housing elsewhere and no impact would occur.

Mitigation Measures: None required.

XV.	PUBLIC SERVICES. Would the project result in:	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
			Incorporation		

 a) Substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:

	i)	Fire protection?				
	ii)	Police protection?				
	iii)	Schools?			\boxtimes	
	iv)	Parks?			\boxtimes	
	v)	Other public facilities?			\boxtimes

XVII.	TRA	ANSPORTATION. Would the project:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporation	Less Than Significant Impact	No Impact
	a)	Cause an increase in traffic which is substantial in relation to the existing traffic load and capacity of the street system and/or conflict with General Plan Policy CIR-38, which seeks to maintain an adequate Level of Service (LOS) at signalized and unsignalized intersections, or reduce the effectiveness of existing transit services or pedestrian/bicycle facilities?			\boxtimes	
	b)	Conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?			\boxtimes	
	c)	Would the project conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?			\boxtimes	
	d)	Substantially increase hazards due to a geometric design feature, (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?			\boxtimes	
	e)	Result in inadequate emergency access?			\boxtimes	
	f)	Conflict with General Plan Policy CIR-14, which requires new uses to meet their anticipated parking demand, but to avoid providing excess parking which could stimulate unnecessary vehicle trips or activity exceeding the site's capacity?				

The site is located on the southeast corner of Los Carneros Avenue and State Route 12/121. Access to the winery is from an existing driveway on Los Carneros Avenue, approximately 860 feet from the Los Carneros Avenue/State Route (SR) 12/121 intersection. The applicant has submitted a traffic study *Traffic Impact Study for the Proposed Hyde Winery Expansion*, prepared by W-Trans, dated September 14, 2018, and an addendum, dated July 28, 2020, which analyze existing and proposed traffic conditions and provides the basis for this analysis. The current proposal includes increasing the number of employees from 2 full-time and 2 part-time to 5 full-time and 4 part-time, increasing the number of onsite parking spaces from 13 to 35, increasing the number of visitors for tours and tastings by prior appointment from 20 to 125 people a day (maximum of 875 per week) and modifying the Marketing Plan to allow eight (8) events per year with a maximum of 55 guests, two (2) events per year with a maximum of 150 quests, and retaining one annual event with a maximum of 100 quests.

a. The updated CEQA Guidelines Section 15064.3 states that a project's potential environmental impacts should evaluate the generation of vehicle miles traveled (VMT) and that a project's effect on automobile delay and Level of Service (LOS) shall no longer constitute a significant environmental impact. As noted above, the applicant submitted a traffic impact study, prepared by W-Trans, dated September 14, 2018, with the winery use permit modification application submittal. W-Trans collected vehicle counts for the traffic analysis on a Thursday and Saturday in April of 2018. A seasonal adjustment factor was applied to the weekday volumes to arrive at typical August Thursday traffic conditions.

Based on the current entitlement, the project is expected to generate 26 daily trips on a typical weekday, 24 trips on a Saturday and 25 trips on a Saturday during crush. Trips during the PM peak hour would be 10 on a weekday and 14 on both Saturday scenarios. As analyzed in the submitted traffic study, the increases in employment and tours and tastings visitation proposed in this application would result in 120 daily trips on a weekday (an increase of 94 trips), 112 daily trips on a Saturday (an increase of 98 trips) and 113 daily trips on a Saturday during crush (an increase of 99 trips). Trips during the PM peak hour would increase from 10 to 46 on a weekday and from 14 to 64 on Saturdays, an increase of 36 weekday trips and 50 Saturday trips.

The traffic study analyzed the potential impacts of the project during the weekday PM and weekend mid-day peak hour on three intersections in the vicinity: SR 12/121/Cuttings Wharf Road, SR 12/121/Los Carneros Avenue, and SR 12/121/Old Sonoma Road. The intersections of SR 12/121/Cuttings Wharf Road, SR 12/121/Los Carneros Avenue have one or two approaches that are controlled by a stop sign. The SR 12/121/Old Sonoma Road has a traffic signal. According to the study, for informational purposes, all three intersections currently operate at an unacceptable service level during one or both peak periods. However, traffic added to the intersections of SR 12/121/Cuttings Wharf Road and SR 12/121/Old Sonoma Road would not have a significant impact. Traffic added to the SR 12/121/Los Carneros Avenue would exceed the level of significance under existing and future conditions. Again, the thresholds of significance and potential impacts are related to LOS, which is no longer considered an environmental impact.

In order to address the potential impact SR 12/121 intersection with Los Carneros Road, an Addendum to the traffic study dated July 28, 2020, was submitted, providing additional information on their proposed Traffic Demand Management (TDM) plan which would appoint a winery staff person as TDM coordinator to facilitate improvements to employees commuting and visitation scheduling. The solution presented in the Addendum requires the TDM coordinator to schedule visitation appointments that would restrict new traffic during the peak hours (Fridays between 4:00 and 5:00 p.m. and Saturdays between 3:45 and 4:45 p.m.). With incorporation of the TDM scheduling, the project will not have a significant impact on the level of service or the capacity and function of the roadway system. Impacts to the County roadway system would be less than significant.

- b. As proposed, the project would not conflict with any adopted policies, plans or programs supporting alternative transportation. There are no bus stops within walking distance of the project site. There are existing Class II bicycle facilities (on-street or highway bike lane) on Cuttings Wharf Road which is west of and runs parallel to Los Carneros Avenue. There are also Class II bicycle facilities on portions of the State highway. According to the Napa Countywide Bicycle Plan, adopted by the Board of Supervisors in June 2012, the Class II bicycle facilities will be extended along the highway and are also proposed on Old Sonoma Road, northeast of the project site.
- c. The transition to VMT is required of lead agencies beginning July 1, 2020. In anticipation of the transition, the Circulation Element includes new policies that reflect this new regulatory framework for transportation impact assessment, along with a draft threshold of significance that is based on reduction of VMT compared to the unmitigated project rather than the regional average VMT (Draft Policies CIR-7 through CIR-9). Staff believes this alternative approach to determining the significance of a project's transportation impacts would be better suited to this County's rural context, while still supporting the efforts of the County to achieve the greenhouse gas emissions goals of its pending Climate Action Plan. The reduction in VMT and, correspondingly, GHG emissions from the transportation sector, is also necessary for Napa County, the region, and the state to achieve long-term, statewide mandates targeted toward reducing GHG emissions. Such mandates include, but are not limited to Executive Orders S-3-05 and B-16-12, which respectively, set a general statewide GHG emissions reduction target of 80 percent below 1990 levels by 2050, and an 80 percent GHG emissions reduction below 1990 levels (also by 2050) specifically for the transportation sector. The applicant's intent to create a TDM plan and appoint a TDM coordinator demonstrates the winery's efforts to reduce vehicle miles traveled. The project would not conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b). Impacts would be less than significant.
- d/e. The project site includes an existing driveway on Los Carneros Avenue. The driveway was designed to comply with all County standards including emergency vehicle access. Sight lines along Los Carneros Avenue from the project driveway are adequate. Minor widening of the existing driveway at the connection to the proposed parking spaces and designation of new parking spaces have been reviewed by Engineering and Fire Division. The project will not result in any changes to levels of service or cause any new safety risks.
- f. There is currently parking for 12 vehicles provided on site. The original approval allowed up to 13 parking spaces. Developers of new or expanded land uses are required to provide adequate parking or demonstrate that adequate parking exists to meet their anticipated parking demand. Excess parking that could stimulate unnecessary vehicle trips or commercial activity exceeding the site's capacity is discouraged. A total of 35 parking are propose on-site based on the winery's business plan, visitation, and employment levels. The proposed parking spaces would be located in previously disturbed areas of the site. Parking for the larger marketing events will be off-site with shuttle service to the winery. No parking is proposed or will be permitted within the right-of-way of Los Carneros Avenue or the State highway.

XVIII.	sub cult eith def	BAL CULTURAL RESOURCES. Would the project cause a stantial adverse change in the significance of a tribal ural resource, defined in Public Resources Code section 21074 as her a site, feature, place, cultural landscape that is geographically ined in terms of the size and scope of the landscape, sacred place, or ect with cultural value to a California Native American tribe, and that	Potentially Significant Impact	Less Than Significant With Mitigation Incorporation	Less Than Significant Impact	No Impact
	a)	Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k); or				\boxtimes
	b)	A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code section 5024.1? In applying the criteria set forth in subdivision (c) of Public Resources Code section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.				

a/b. On August 28, 2017, County Staff sent invitations to consult on the proposed project to Native American tribes who had a cultural interest in the area and who as of that date had requested to be invited to consult on projects, in accordance with the requirements of Public Resources Code section 21080.3.1. A response was received from the Middletown Rancheria stating that they have no comments at this time. However, they did request that they be contacted should there be discovery of cultural resources during project construction. No other comments were received and the consultation period closed on September 27, 2017.

XIX.	UT	ILITIES AND SERVICE SYSTEMS. Would the project:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporation	Less Than Significant Impact	No Impact
	a)	Require or result in the relocation or construction of a new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?				
	b)	Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?				
	c)	Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?			\boxtimes	
	d)	Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?			\boxtimes	
	e)	Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?			\boxtimes	

- a-c. The project would not require the construction of a new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas or telecommunications facilities, the construction or relocation of which could cause significant environmental effects. An existing well, constructed at the site in 2005, is proposed as the project's water source. There is also another well on-site that provide water for the vineyard that would serve as a backup in case of an emergency. As noted above, the applicant submitted a Water Availability Analysis (WAA) completed by CMP Civil Engineering showing the projected overall water demand for the project site of 5.13 AF/YR representing a 0.30 AF/YR increase of the existing water demand of 4.83 AF/YR. The parcel water demand can be met with the existing project well. Similarly, all of the wastewater generated by the winery (process wastewater and sanitary wastewater) would be treated on-site using existing treatment systems. With water and wastewater treatment facilities provided on-site, the proposed project requires no determination of service or will-serve letters from water or wastewater treatment service providers.
- d/e. Non-recyclable and non-organic waste generated on the property is collected by Napa Recycling and Waste Services (NRWS) and ultimately deposited at the Keller Canyon Landfill (located in unincorporated eastern Contra Costa County), which, having reached roughly 15 percent of its capacity in the first 12 years of its approximated 50 years of operation (which began in 1992), and extrapolating that same rate of material to date, has adequate capacity remaining to accommodate any non-recyclable and non-organic waste generated from the proposed winery. Beginning in 2016, all establishments that would generate organic waste (such as food waste from wine/food pairings or food service at the proposed winery's marketing events) are required to participate in NRWS's food composting program, as a means to support efforts to achieve State mandates for reductions of greenhouse gas emissions generated from decomposition of material deposited into landfills.

Mitigation Measures: None required.

XX.		_DFIRE. If located in or near state responsibility areas or lands ssified as very high fire hazard severity zones, would the project:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporation	Less Than Significant Impact	No Impact
	a)	Substantially impair an adopted emergency response plan or emergency evacuation plan?				
	b)	Due to slope, prevailing winds and other factors, exacerbate wildfire risks and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?			\boxtimes	
	c)	Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?			\boxtimes	
	d)	Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?			\boxtimes	

Discussion:

a-d. The proposed project is located within the local responsibility area. There are no project features that would substantially impair an adopted emergency response plan or emergency evacuation plan. The project site is generally flat with slopes ranging from 0-5% and is located on the valley floor with access from Los Carneros Avenue. There are existing overhead power lines along Los Carneros Avenue and the State Highway. The existing overhead lines will not be affected by the project. Water storage tanks for fire suppression will be provided on site. The project would comply with current California Department of Forestry and California Building Code requirements for fire safety. Impacts would be less than significant.

XXI.	MA	NDATORY FINDINGS OF SIGNIFICANCE	Potentially Significant Impact	Less Than Significant With Mitigation Incorporation	Less Than Significant Impact	No Impact
	a)	Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?				
	b)	Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?				
	c)	Does the project have environmental effects that will cause substantial adverse effects on human beings, either directly or indirectly?				

- 1. The site has been previously disturbed and does not contain any known listed plant or animal species. The project will not degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, or reduce the number or restrict the range of a rare or endangered plant or animal. All potential biological related impacts would be less than significant. As identified in Section V above, no known historically sensitive sites or structures, archaeological or paleontological resources, sites of unique geological features have been identified within the project site. No historic or prehistoric resources are anticipated to be affected by the proposed project nor will the proposed project eliminate important examples of the major periods of California history or prehistory. In the event archaeological artifacts are found, a standard condition of approval and mitigation measure would be incorporated into the project. Impacts would be less than significant.
- 2. The project does not have impacts that are individually limited but cumulatively considerable. Potential air quality, greenhouse gas emissions, hydrology, and traffic impacts are discussed in the respective sections above. The analysis determined that all potential impacts were less than significant and would not contribute significantly to cumulative impacts. The project does not propose new development that would have a significant impact on the environment or substantially change the existing conditions. With the imposition of standard and project specific conditions of approval, the project does not have impacts that are individually limited, but cumulatively considerable.
- c. There are no schools or hospitals housing sensitive receptors within a quarter-mile of the project site. Noise from construction that would occur with construction and installation of the proposed site improvements would be temporary, would be limited to day time hours, and would be subject to best management practices intended to limit fugitive dust and protect stormwater quality. Ongoing operations of the winery are also anticipated to have less than significant noise impacts on nearby residences due to distance between those residences and the proposed tasting room patio and partially enclosed work area.
