SUBJECT: REQUEST FOR RECYLCED WATER SERVICE
Silverado Suscol Vineyards and SPP Napa Vineyards

Dear Michael:

I am writing on behalf of my clients, SPP Napa Vineyards, LLC and Silverado Suscol Vineyards, LLC. Silverado Suscol is an existing 200 acre vineyard located on the east side of Suscol Avenue (Hwy 221) near its intersection with Highway 29. SPP Napa Vineyards is in the planning stages, proposing approximately 440 acres on both the north and south sides of Suscol Creek. The enclosed map shows the location of both vineyards. We are writing to request a "Will Serve" letter for delivery of recycled water to both projects. The existing Silverado Suscol Vineyard is prepared to accept recycled water as soon as the delivery routes are completed. SPP Napa Vineyards could accept water after final plan approval and vineyard installation. We felt that a single request that outlines the owner's long term plans for irrigation in this general area would provide you with better information regarding long term demand. Total demand for both vineyards would not exceed 300 acre feet of water annually.

The owners feel that the long term ability to access recycled water service for agricultural irrigation is an important alternative water source, even if current groundwater is shown to be more than adequate. The use of treated wastewater for agricultural irrigation puts this available water to a beneficial use.

We have started preliminary investigation into the location of the existing recycled water lines, with the assistance of Winzler & Kelly. With the assistance of Winzler & Kelly, we would be available to participate in the design and engineering effort as needed.

We are also aware of the process that NSD is going through to evaluate the area demand for recycled water service. We hope that this information is helpful in the context of establishing the long term desire for recycled water service to this parcel. Please contact me if you need additional information to process this request.

Sincerely,

Beth Painter
