Re: Use Permit Application for Lake Ridge
Winery/Edward Fitts
Located at 90 Long Ranch Road
Assessor Parcel # 032-010-068
File #P09-00039

We have reviewed the above proposal and recommend approval of the application providing the following are included as conditions of approval:

1. The proposed water system to serve this project is not currently required to be regulated as a small public water system by this Department under California Code of Regulations, Title 22, or Napa County Code. Therefore, we have no comment as to its adequacy at this time. The applicant will be required to provide minimal information on the water system prior to issuance of a building permit, and may wish to retain the services of a consultant in this matter.
2. Plans for the proposed alternative sewage treatment system shall be designed by a licensed Civil Engineer or Registered Environmental Health Specialist and be accompanied by complete design criteria based upon local conditions. No building clearance (or issuance of a building permit) for any structure that generates wastewater to be disposed of by this system will be granted until such plans are approved by the Department of Environmental Management.
3. A permit for the combined sanitary and process wastewater system (pre-treatment to subsurface drip) must be secured from the Department of Environmental Management prior to issuance of a building clearance (or issuance of a building permit) for any structure that generates wastewater to be disposed of by this system. To secure this permit you will be required to submit a scaled plot plan showing the location of the proposed septic system relative to the proposed project and other structures, the required 100% expansion area as well as the proposed trench detail. If special design sewage disposal plans are required, such plans shall fulfill this requirement.
4. An annual sewage permit must be obtained for the engineered/private sewage disposal system prior to issuance of a final on the project. The septic system monitoring, as required by this permit, must be fully complied with.

1195 Third Street, Suite 101 • Napa, California 94559
Telephone: (707) 253-4471 • Fax: (707) 253-4545 • www.co.napa.ca.us

5. Any hazardous waste produced on the site including any laboratory wastes, must be stored and disposed of in a manner consistent with Division 20, Chapter 6.5 of the California Health and Safety Code and with Title 22, Division 4.5, of the California Code of Regulations. A Hazardous Waste Generator Permit must be obtained from Environmental Management.
6. Pursuant to Chapter 6.5 & 6.95 of the California Health and Safety Code, businesses that generate hazardous waste and/or store hazardous materials above threshold amounts shall file a Hazardous Waste Generator Application and/or Hazardous Materials Business Plan with the Department of Environmental Management within 30 days of said activities. All businesses must submit the required Business Activities Form which can be obtained from the Department of Environmental Management
7. All solid waste shall be stored and disposed of in a manner to prevent nuisances or health threats from insects, vectors and odors.
8. During the construction, demolition, or renovation period of the project the applicant must use the franchised garbage hauler for the service area in which they are located for all wastes generated during project development, unless applicant transports their own waste. If the applicant transports their own waste, they must use the appropriate landfill or solid waste transfer station for the service area in which the project is located.
9. Adequate area must be provided for collection of recyclables. The applicant must contact the franchised garbage hauler for the service area in which they are located, in order to determine the area and the access needed for the collection site.
10. All diatomaceous earth and/or bentonite must be dried and disposed of as solid waste or in another appropriate manner. If the proposed septic system is either a special design sewage disposal system or a private sewage disposal system, the plan submitted for review and approval must address diatomaceous earth/ bentonite disposal.
