

Lattice Tower/Blend with Environment

The Lattice Tower for the proposed site is the best design to blend naturally into the surrounding environment. The area has existing "Lattice" type PGE towers.

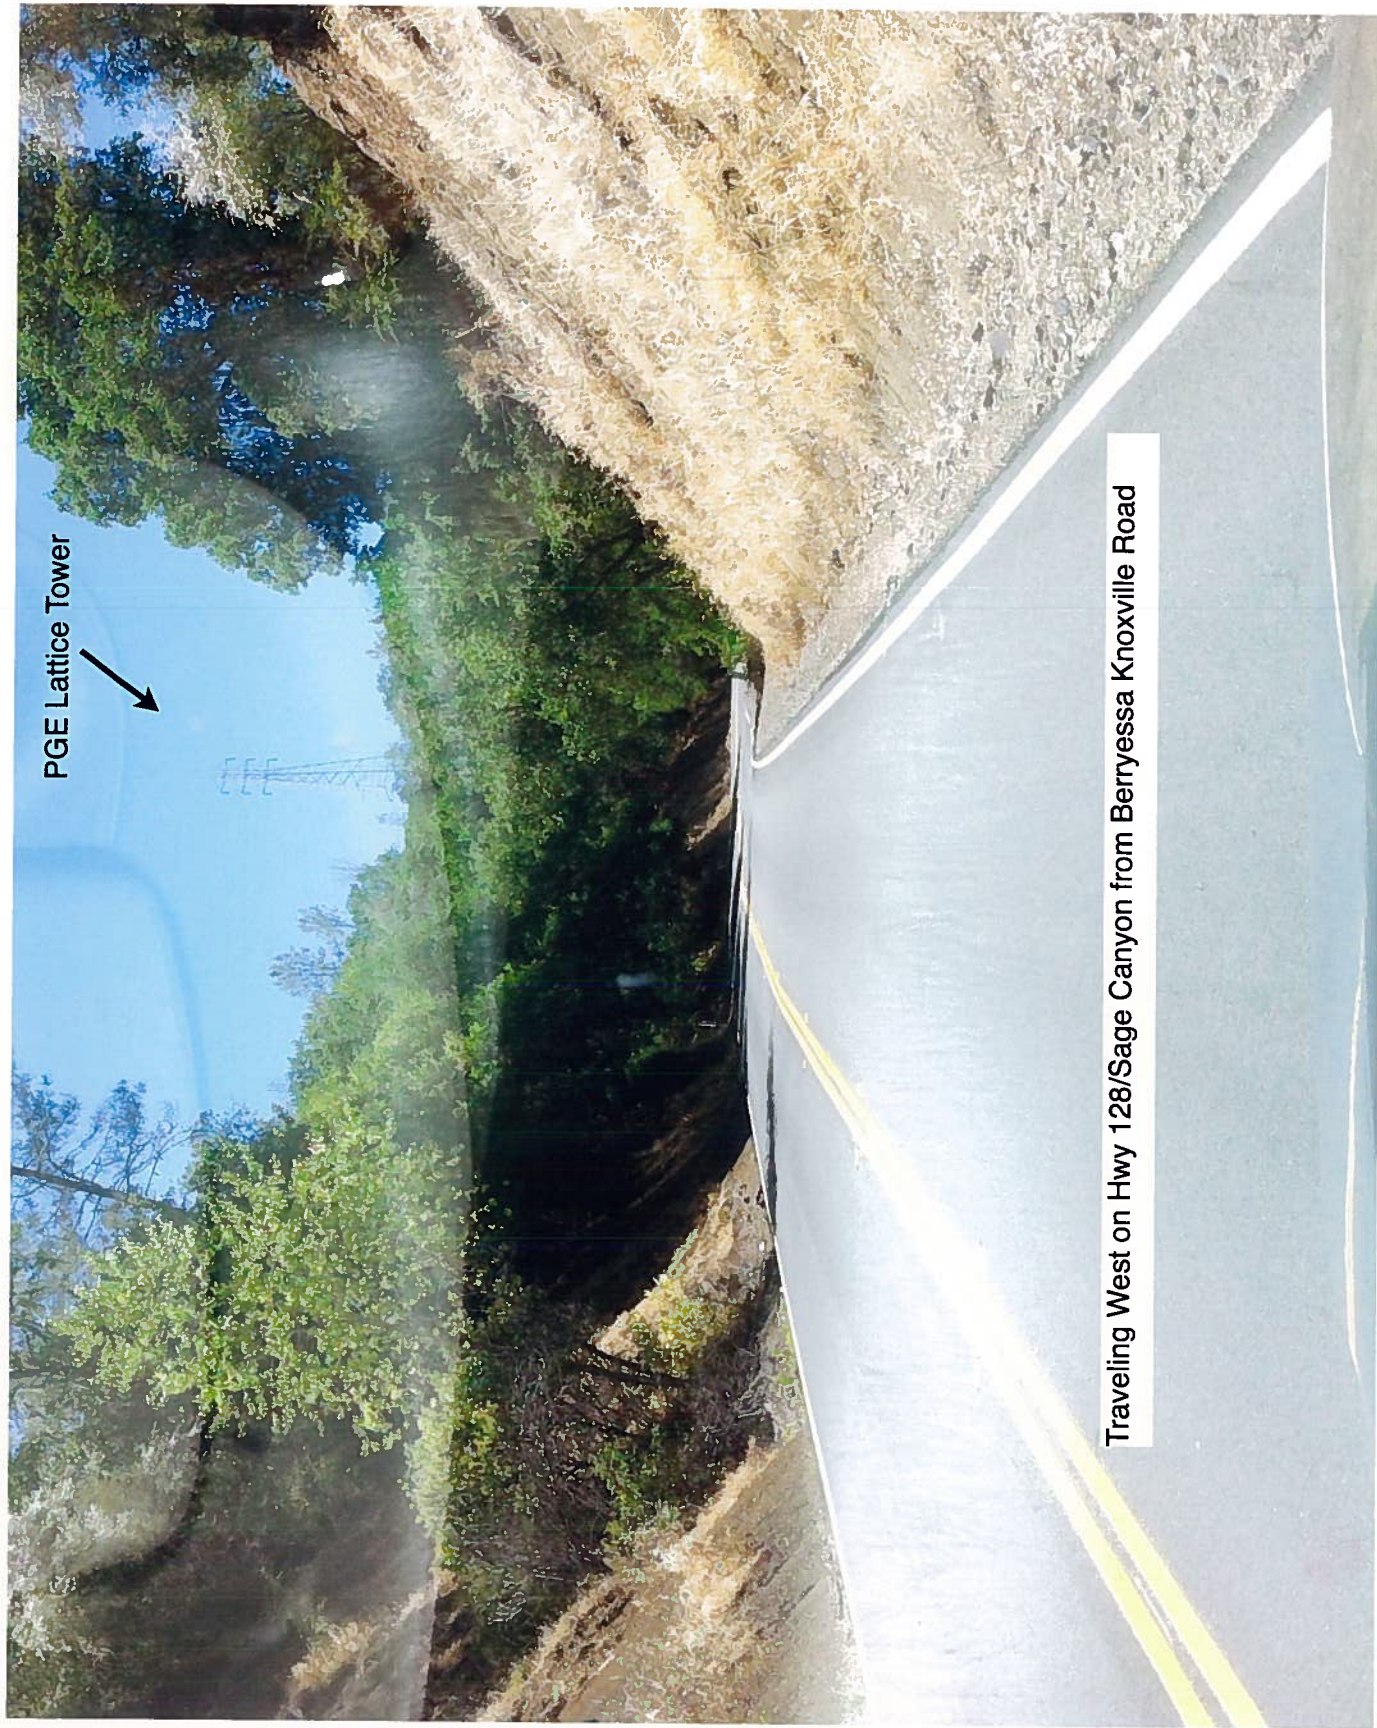

From public highways, the proposed Verizon tower will be consistent and blend in nicely. While driving on public roads and from surrounding areas, utility lattice towers run throughout the natural environment and have become "effectively unnoticeable "

Therefore, the proposed Verizon lattice tower will simply blend in with its surrounding and will be consistent with Section 18.119.030 D that allows projects on exposed ridgeline or public trails providing that it will *"blend with the surrounding existing natural and man-made environment in such a manner as to be effectively unnoticeable"*.

Included Herewith:

Two Photos showing Existing Lattice PGE towers as seen while driving on public road Highway 128-Sage Canyon Road – Napa

Photo Simulation showing Verizon Proposed 120-foot Lattice Tower as blending with natural and man-made environment consistent with Section 18.119.030 D similar to Existing PGE Lattice towers.

PGE Lattice Tower
