COUNTY OF NAPA PLANNING, BUILDING & ENVIRONMENTAL SERVICES DEPARTMENT 1195 THIRD ST., SUITE 210, NAPA, CA 94559 (707) 253-4416

Initial Study Checklist (form updated February 2015)

- 1. **Project Title:** Hudson Vineyard Winery, Use Permit #P14-00202.
- 2. **Property Owner:** Hudson Vineyards, LLC; 5398 Carneros Highway, Napa, CA 94559; (707) 255-1455.
- 3. **Project Sponsor's Name and Address:** Lee Hudson Vineyards; 5398 Carneros Highway, Napa, CA 94559; (707) 255-1455.
- 4. **Representative**: George Monteverdi, Monteverdi Consulting, LLC; PO Box 6079, Napa, CA 94581; (707) 761-2516; george@monteverdiconsulting.com.
- 5. County Contact Person, Phone Number and email: Shaveta Sharma; (707) 299-1358; shaveta.sharma@countyofnapa.org
- 6. **Project Location and APN:** The project is located on a 166.8 acre parcel, within the AW (Agricultural Watershed) zoning district on the north side of State Highway 12/121, approximately one mile west of its intersection with Old Sonoma Road; 5398 Carneros Highway, Napa CA; APN: 047-070-016.
- 7. **General Plan Description:** Agriculture, Watershed, and Open Space (AWOS) Designation.
- 8. **Zoning:** Agricultural Watershed (AW) District.
- 9. **Background/Project History:** The existing parcel consists of 100 acres of vineyards which were originally planted between 1986 and 2008. The site also includes an existing residence of 1,260 square feet, farm operations center, irrigation reservoir, two wells, greenhouse, and several agricultural workshop, storage, and maintenance buildings.
- 10. **Project Description:** Approval of a new Winery Use Permit to allow the following:
 - (a) Production up to 80,000 gallons per year:
 - (b) Construction of approximately 33,042 square feet Type III cave;
 - (c) Tours and tastings by appointment only on a daily basis up to a maximum of 120 visitors per day and a weekly maximum of 480 visitors;
 - (d) Marketing events up to six per month with a maximum of 24 guests;
 - (e) Marketing events up to seven per year with a maximum of 50 guests;
 - (f) Marketing events up to three per year with a maximum of 150 guests;
 - (g) A maximum of 24 employees;
 - (h) Construction of a new winery hospitality building totaling 6,911 square feet, with a commercial kitchen, 2,327 square foot winery office building with storage and laboratory space, and a 4,810 square foot covered crush pad;
 - (i) Request for on premise consumption of wines produced on site within the hospitality building and outdoor patio consistent with Business and Professions Code §§23356, 23390, and 23396.5;
 - (j) Construction of a Transient Non-Community Water System (a water system to serve the winery, visitors, and employees);
 - (k) Construction of a wastewater treatment system;
 - (I) Construction of 29 parking spaces;
 - (m) Construction of a twenty foot wide access driveway to the proposed winery buildings; and
 - (n) Landscaping improvements including a picnic area near the hospitality building.

11. Environmental setting and surrounding land uses:

The 166.8 acre parcel is located the north side of State Highway 12/121, approximately one mile west of its intersection with Old Sonoma Road and zoned Agricultural Watershed. Approximately 100 of the 166.8 acre site is planted in vineyard. The soils on site are Bale clay loam, (0 to 2 percent slopes), Diablo clay (5 to 15 percent slopes), Forward Gravelly loam (9 to 30 percent slopes), and Haire clay loam, (2 to 15 percent slopes). The parcel has a steep northern slope with slopes ranging from zero to 30%. The location to be developed with winery buildings averages less than five prevent slope, the proposed cave area is over 15% slope. The parcel is developed with a residence, 100 acres of vineyard, farm operations center, irrigation reservoir, two wells, greenhouse, and several agricultural workshop, storage, and maintenance buildings. The surrounding land uses include vineyards, wineries (Artesa Winery, Domaine Carneros, Cuvaison Carneros), and residential development on large parcels, the nearest of which is approximately 2,700 feet from the proposed winery. An

unnamed blue line stream which flows into Huichica Creek runs along the western property line. No construction or winery activities are proposed near the creek.

Other agencies whose approval is required (e.g., permits, financing approval, or participation agreement).

The project would also require various ministerial approvals by the County, including but not limited to building permits, and waste disposal permits, in addition to CalFire. Permits may also be required by the Department of Alcoholic Beverage Control and Bureau of Alcohol, Tobacco, & Firearms.

Responsible (R) and Trustee (T) Agencies CalTrans.

Other Agencies Contacted
Federal Trade and Taxation Bureau
Department of Alcoholic Beverage Control

ENVIRONMENTAL IMPACTS AND BASIS OF CONCLUSIONS:

The conclusions and recommendations contained herein are professional opinions derived in accordance with current standards of professional practice. They are based on a review of the Napa County Environmental Resource Maps, the other sources of information listed in the file, and the comments received, conversations with knowledgeable individuals; the preparer's personal knowledge of the area; and, where necessary, a visit to the site. For further information, see the environmental background information contained in the permanent file on this project.

On the	basis of this initial evaluation:
	I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will b prepared.
	I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this cas because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION wibe prepared.
	I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required. I find that the proposed project MAY have a "potentially significant impact" or "potentially significant unless mitigated" impact on the environment, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2 has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPAC REPORT is required, but it must analyze only the effects that remain to be addressed.
	I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided comitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.
	a Sharma, Planner III Date ounty Planning, Building, and Environmental Services

	A E (OTHER INC. W. LINE	Potentially Significant Impact	Significant With Mitigation Incorporation	Less Than Significant Impact	No Impact
I.	AE:	STHETICS. Would the project:				
	a)	Have a substantial adverse effect on a scenic vista?				
	b)	Substantially damage scenic resources, including, but not limited to, trees,				
		rock outcroppings, and historic buildings within a state scenic highway?			\boxtimes	
	c)	Substantially degrade the existing visual character or quality of the site and its				
		surroundings?	Ш			
	d)	Create a new source of substantial light or glare which would adversely affect				
		day or nighttime views in the area?			\boxtimes	

Loce Than

Discussion:

- a-c Visual resources are those physical features that make up the environment, including landforms, geological features, water, trees and other plants, and elements of the human cultural landscape. A scenic vista, then, would be a publicly accessible vantage point such as a road, park, trail, or scenic overlook from which distant or landscape-scale views of a beautiful or otherwise important assembly of visual resources can be taken-in. As generally described in the **Environmental Setting and Surrounding Land Uses** section, above, this area is defined by a mix of vineyard, winery, residential uses, and an unnamed stream. The project would not result in substantial damage to scenic resources or substantially degrade the visual character or quality of the site and its surroundings. The project site is currently developed with an existing residence, farm operations center, irrigation reservoir, well, greenhouse, and several agricultural workshop, storage, and maintenance buildings. The proposal includes construction of two new winery buildings totaling 9,238 square feet, including hospitality functions and incidental retail and office uses, a 4,810 square foot covered crush pad, a 33,402 square feet cave, 29 parking spaces, a Transient Non-Community Water System, landscaping improvements, and 20 foot wide driveway leading to the new structures. The structures are proposed to be set back 3,600 feet from State Highway 12/121. As the State Highway is considered a Viewshed Road, the applicant has prepared and submitted a Viewshed analysis. The analysis has determined that due to the nature of existing slopes and the proposed location of the additional buildings, there is no visual impact from the State Highway. There are no rock outcroppings visible from the road or other designated scenic resources on the property.
- The construction of winery uses may result in the installation of additional lighting that may have the potential to impact nighttime views. Although the project is in an area that has a certain amount of existing nighttime lighting, the installation of new sources of nighttime lights may affect nighttime views. Pursuant to standard Napa County conditions of approval for wineries, outdoor lighting will be required to be shielded and directed downwards, with only low level lighting allowed in parking areas. As designed, and as subject to the standard condition of approval, below, the project will not have a significant impact resulting from new sources of outside lighting.

All exterior lighting, including landscape lighting, shall be shielded and directed downward, shall be located as low to the ground as possible, shall be the minimum necessary for security, safety, or operations, shall be on timers, and shall incorporate the use of motion detection sensors to the greatest extent practical. No flood-lighting or sodium lighting of the building is permitted, including architectural highlighting and spotting. Low-level lighting shall be utilized in parking areas as opposed to elevated high-intensity light standards. Lighting utilized during harvest activities is not subject to this requirement.

Prior to issuance of any building permit pursuant to this approval, two (2) copies of a detailed lighting plan showing the location and specifications for all lighting fixtures to be installed on the property shall be submitted for Planning Division review and approval. All lighting shall comply with the California Building Code.

II. AC	GRICULTURE AND FOREST RESOURCES. 1 Would the project:	Potentially Significant Impact	Less I han Significant With Mitigation Incorporation	Less Than Significant Impact	No Impact
a)	Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Important (Farmland) as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?				\boxtimes
b)	Conflict with existing zoning for agricultural use, or a Williamson Act contract?	П	П	П	\bowtie
c)	Conflict with existing zoning for, or cause rezoning of, forest land as defined in Public Resources Code Section 12220(g), timberland as defined in Public Resources Code Section 4526, or timberland zoned Timberland Production as defined in Government Code Section 51104(g)?				
d)	Result in the loss of forest land or conversion of forest land to non-forest use in a manner that will significantly affect timber, aesthetics, fish and wildlife, biodiversity, water quality, recreation, or other public benefits?				\boxtimes
e)	Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland to non-agricultural use?				\boxtimes

a/b/e. The project site is designated Prime Farmland and would not result in the conversion of Prime Farmland, Unique Farmland or Farmland of Statewide Important as shown on the Napa County Important Farmland Map 2002 prepared by the California Department of Conservation District, Division of Land Resource Protection, pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency. The proposed project would not conflict with existing zoning for agricultural uses. There is an existing Agricultural contract on the property which allows for a winery. No vines will be removed as part of the proposal. There are no other changes included in this proposal that would result in the conversion of Farmland beyond the immediate project site. General Plan Agricultural Preservation and Land Use policies AG/LU-2 and AG/LU-13 recognize wineries, and any use consistent with the Winery Definition Ordinance and clearly accessory to a winery, as agriculture. As a result, this application will not result in the conversion of special status farmland to a non-agricultural use.

The project site is zoned Agricultural Watershed (AW), which allows wineries upon grant of a use permit. According to the Napa County c/d. Environmental resource maps (based on the following layers – Sensitive Biotic Oak Woodlands, Riparian Woodland Forest and Coniferous Forest) the project site does not contain woodland or forested areas. Therefore, the proposed project will not conflict with existing zoning for, or cause rezoning of forest land, timberland, or timberland zoned Timberland Production.

Mitigation Measures: None required.

addressed in this checklist.

[&]quot;Forest land" is defined by the State as "land that can support 10-percent native tree cover of any species, including hardwoods, under natural conditions, and that allows for management of one or more forest resources, including timber, aesthetics, fish and wildlife, biodiversity, water quality, recreation, and other public benefits." (Public Resources Code Section 12220(g)) The Napa County General Plan anticipates and does not preclude conversion of some "forest land" to agricultural use, and the program-level EIR for the 2008 General Plan Update analyzed the impacts of up to 12,500 acres of vineyard development between 2005 and 2030, with the assumption that some of this development would occur on "forest land." In that analysis specifically, and in the County's view generally, the conversion of forest land to agricultural use would constitute a potentially significant impact only if there were resulting significant impacts to sensitive species, biodiversity, wildlife movement, sensitive biotic communities listed by the California Department of Fish and Wildlife, water quality, or other environmental resources

			Potentially Significant Impact	Less Than Significant With Mitigation Incorporation	Less Than Significant Impact	No Impac
III.		R QUALITY. Where available, the significance criteria established by the applical on to make the following determinations. Would the project:	ole air quality managei	ment or air pollution	control district r	nay be relie
	a)	Conflict with or obstruct implementation of the applicable air quality plan?			\boxtimes	
	b)	Violate any air quality standard or contribute substantially to an existing or projected air quality violation?			\boxtimes	
	c)	Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors)?	П	П	\bowtie	П
	d)	Expose sensitive receptors to substantial pollutant concentrations?			\boxtimes	
	e)	Create objectionable odors affecting a substantial number of people?			\boxtimes	

a-c. On June 2, 2010, the Bay Area Air Quality Management District's Board of Directors unanimously adopted thresholds of significance to assist in the review of projects under the California Environmental Quality Act (CEQA). The thresholds were designed to establish the level at which the District believed air pollution emissions would cause significant environmental impacts under CEQA and were posted on the Air District's website and included in the Air District's May 2011 updated CEQA Guidelines.

On March 5, 2012 the Alameda County Superior Court issued a judgment finding that the Air District had failed to comply with CEQA when it adopted the thresholds. On August 12, 2013, the Court of Appeal reinstated the District's thresholds of significance provided in Table 3-1 (Criteria Air Pollutants & Precursors Screening Levels Sizes) and they are applicable for evaluating projects in Napa County.

The proposed project would account for 118 maximum daily trips, inclusive of employees and visitation, on a typical weekday, and 104 trips on harvest-season day with no marketing events.

Over the long term, emission sources for the proposed project will consist primarily of mobile sources including vehicles visiting the site. The Air District's threshold of significance provided in Table 3-1 has determined that similar projects such as a quality restaurant that do not exceed a threshold of 47 ksf will not significantly impact air quality and do not require further study (BAAQMD CEQA Guidelines, May 2011 Pages 3-2 & 3-3.). Given the size of the project is 9,238 sq.ft. compared to the BAAQMD's screening criterion of 47ksf NOX (high quality restaurant) and 541ksf (general light industry), the project would contribute an insignificant amount of air pollution and would not result in a conflict or obstruction of an air quality plan. (Please note: a high quality restaurant is considered comparable to a winery tasting room for purposes of evaluating air pollutant emissions, but grossly overstates emissions associated with other portions of a winery, such as office, barrel storage and production, which generate fewer vehicle trips. Therefore, a general light industry comparison has also been used for other such uses.)

The proposed project would not conflict with or obstruct the implementation of any applicable air quality plan. Wineries as proposed here are not producers of air pollution in volumes substantial enough to result in an air quality plan conflict. The project site lies within the Napa Valley, which forms one of the climatologically distinct sub-regions (Napa County Sub region) within the San Francisco Bay Area Air Basin. The topographical and meteorological features of the Valley create a relatively high potential for air pollution. Over the long term, emissions resulting from the proposed project would consist primarily of mobile sources, including production-related deliveries and visitor and employee vehicles traveling to and from the winery. The resulting busiest day plus marketing total of 237 two-way trips is well below the threshold of significance. The proposed project would not result in a cumulatively considerable net increase in any criteria pollutant for which the project region is in non-attainment under an applicable federal or state ambient air quality standard.

d. In the short term, potential air quality impacts are most likely to result from earthmoving and construction activities required for project construction. Earthmoving and construction emissions would have a temporary effect; consisting mainly of dust generated during grading and other construction activities, exhaust emissions from construction related equipment and vehicles, and relatively minor emissions from paints and other architectural coatings. The Air District recommends incorporating feasible control measures as a means of addressing construction impacts. If the proposed project adhere to these relevant best management practices identified by the Air District and the County's standard conditions of project approval, construction-related impacts are considered less than significant:

During all construction activities the permittee shall comply with the Bay Area Air Quality Management District Basic Construction Best Management Practices, as provided in Table 8-1, May 2011 Updated CEQA Guidelines:

- Post a publicly visible sign with the telephone number and person to contact at the lead agency regarding dust complaints. The Air District's phone number shall also be visible.
- All exposed surfaces (e.g., parking areas, staging areas, soil piles, grading areas, and unpaved access roads) shall be watered two times per day.
- All haul trucks transporting soil, sand, or other loose material off-site shall be covered.
- All visible mud or dirt tracked out onto adjacent public roads shall be removed using wet power vacuum street sweepers at least once per day. The use of dry power sweeping is prohibited.
- All vehicle speeds on unpaved roads shall be limited to 15 mph.
- All roadways, driveways, and sidewalks to be paved shall be completed as soon as possible. Building pads shall be laid as soon as possible after grading unless seeding or soil binders are used.
- Idling times shall be minimized either by shutting equipment off when not in use or reducing the maximum idling time to five (5) minutes (as required by the California airborne toxics control measure Title 13, Section 2485 of California Code of Regulations (CCR)). Clear signage shall be provided for construction workers at all access points.
- All construction equipment shall be maintained and properly tuned in accordance with manufacturer's specifications. All equipment shall be checked by a certified visible emissions evaluator.

Furthermore, while earthmoving and construction on the site will generate dust particulates in the short-term, the impact would be less than significant with dust control measures as specified in Napa County's standard condition of approval relating to dust:

- Water and/or dust palliatives shall be applied in sufficient quantities during grading and other ground disturbing activities on-site to minimize the amount of dust produced. Outdoor construction activities shall not occur during windy periods.
- e. While the Air District defines public exposure to offensive odors as a potentially significant impact, wineries are not known operational producers of pollutants capable of causing substantial negative impacts to sensitive receptors. Construction-phase pollutants will be reduced to a less than significant level by the above-noted standard condition of approval. The project will not create pollutant concentrations or objectionable odors affecting a substantial number of people. As noted earlier the closest off-site residence is 2,700 feet away from the proposed winery.

IV.	BIO	PLOGICAL RESOURCES. Would the project:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporation	Less Than Significant Impact	No Impact
	a)	Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?			\boxtimes	
	b)	Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or US Fish and Wildlife Service?			\boxtimes	
	c)	Have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, Coastal, etc.) through direct removal, filling, hydrological interruption, or other means?			\boxtimes	
	d)	Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?		П	\boxtimes	П
	e)	Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?				

			Potentially Significant Impact	Less Than Significant With Mitigation Incorporation	Less Than Significant Impact	No Impact
	f)	Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?				\boxtimes
Discuss	sion:					
a/b.	sı kr bo th	ccording to the Napa County Environmental Resource Maps (based on urveys, red legged frog core area and critical habitat, vernal pools & vernown fish presence) no known candidate, sensitive, or special status soundaries. The project would not have a substantial adverse effect on areer are one identified in the project area. The proposal and associated emoval required. In addition, the site has been developed with a vineyal	rnal pool species, S species have been ny special status sp d construction are n	Spotted Owl Habita identified as occuecies, or species on inimal with no significant control of the control of	at – 1.5 mile b urring within th of particular co gnificant gradir	ouffer and ne project ncern, as ng or tree

Furthermore, there were no species or site conditions which would be considered essential for the support of a species with limited distribution or considered to be a sensitive natural plant community. The site has not been identified in any local/regional or State plans

According to the Napa County Environmental Resource Maps (based on the following layers – water bodies, vernal pools & vernal pool species) there is a permanently flooded, diked freshwater pond located north of existing structures and the proposed development on the property. The pond was created by Permit # 18829 of the State Water Resources Control Board. In the permit the applicant is conditioned to not divert flows during the winter months, unless Huichica Creek flows exceed 10 cubic feet/second. The water diverted from the pond is used to irrigate the existing vineyards on the property. The water permit measure limiting diversion is intended to protect fish and wildlife. The project and construction activities are located to the east and will incorporate all BMPs as required by the Engineering Division to prevent runoff and/or contamination of the pond. The winery will be constructed in a previously developed footprint that is not a wildlife corridor. Therefore, project activities will not interfere with the movement of any native resident or migratory fish or wildlife species or with their corridors or nursery sites.

as being a sensitive community. The potential for this project to have an impact on special status species is less than significant.

e/f. This project would not interfere with any ordinances protecting biological resources. There are no tree preservation ordinances in effect in the County. The project will result in the removal of 150 olive trees ranging from 26"-36" dbh, all of which are proposed to be replanted on site. An additional 18 Blue Gum Eucalyptus trees ranging from 28"-32" dbh are proposed to be removed are, as they are not native trees their removal does not create any significant impact to tree preservation. The proposed project would not conflict with the provisions of an adopted Habitat Conservation Plans, Natural Community Conservation Plans or other approved local, regional or state habitat conservation plans.

Mitigation Measures: None required.

No Impact

a-c. According to the Napa County Environmental Resource Maps (based on the following layers – Historical sites points & lines, Archaeology surveys, sites, sensitive areas, and flags) historic sites 1626 and 1627 have been identified on the property. The two sites are located approximately 1,200 and 2,800 feet respectively from the proposed project location. Site 1626 is undeveloped and will not be disturbed by any aspect of the project components. Historic site 1627 has been developed with an existing vineyard and will not be further disturbed by

Discussion:

the proposed winery. Based on the proposed project plans no construction activities are proposed near either site and there would be no impact to historical or cultural resources. However, if resources are found during any earth disturbing activities associated with the project, construction of the project is required to cease, and a qualified archaeologist will be retained to investigate the site in accordance with the following standard condition of approval:

In the event that archeological artifacts or human remains are discovered during construction, work shall cease in a 50-foot radius surrounding the area of discovery. The permittee shall contact the PBES Department for further guidance, which will likely include the requirement for the permittee to hire a qualified professional to analyze the artifacts encountered and to determine if additional measures are required.

If human remains are encountered during the development, all work in the vicinity must be, by law, halted, and the Napa County Coroner informed, so that the Coroner can determine if an investigation of the cause of death is required, and if the remains are of Native American origin. If the remains are of Native American origin, the nearest tribal relatives as determined by the State Native American Heritage Commission shall be contacted by the permittee to obtain recommendations for treating or removal of such remains, including grave goods, with appropriate dignity, as required under Public Resources Code Section 5097.98.

d. No human remains have been encountered on the property and no information has been encountered that would indicate that this project would encounter human remains. However, if resources are found during grading of the project, construction of the project is required to cease, and a qualified archaeologist will be retained to investigate the site in accordance with standard condition of approval noted above.

	05	01.04		Potentially Significant Impact	Less Than Significant With Mitigation Incorporation	Less Than Significant Impact	No Impact
VI.	GE	OLO	GY AND SOILS. Would the project:				
	a)		pose people or structures to potential substantial adverse effects, including risk of loss, injury, or death involving:				
		i)	Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.			\boxtimes	
		ii)	Strong seismic ground shaking?			\boxtimes	
		11)	Strong sciamic ground staking:	Ш	Ш		
		iii)	Seismic-related ground failure, including liquefaction?			\boxtimes	
		iv)	Landslides?			\boxtimes	
	b)	Re	sult in substantial soil erosion or the loss of topsoil?			\boxtimes	
	c)	uns	located on a geologic unit or soil that is unstable, or that would become stable as a result of the project, and potentially result in on- or off-site dslide, lateral spreading, subsidence, liquefaction or collapse?			\boxtimes	
	d)	Exp as	located on expansive soil creating substantial risks to life or property? cansive soil is defined as soil having an expansive index greater than 20, determined in accordance with ASTM (American Society of Testing and terials) D 4829.			\boxtimes	
	e)	alte	we soils incapable of adequately supporting the use of septic tanks or ernative waste water disposal systems where sewers are not available for disposal of waste water?			\boxtimes	

a.

- .) There are no known faults on the project site as shown on the most recent Alquist-Priolo Earthquake Fault Zoning Map. As such, the proposed project would result in a less than significant impact with regards to rupturing a known fault.
- ii.) All areas of the Bay Area are subject to strong seismic ground shaking. Construction of the project will be required to comply with all the latest building standards and codes, including the California Building Code that would reduce any potential impacts to a less than significant level.
- iii.) No subsurface conditions have been identified on the project site that indicated a susceptibility to seismic-related ground failure or liquefaction. Compliance with the latest editions of the California Building Code for seismic stability would result in less than significant impacts.
- iv.) According to the Napa County Environmental Resource Maps (Landslides line, polygon, and geology layers) there are no landslide deposits in the proposed development area.
- b. The proposed development is minimal and will occur on slopes ranging from 0% to 15%, the average slope for winery buildings is five percent, with the proposed cave are having slopes of 15%. Based upon the Soil Survey of Napa County, prepared by the United States Department of Agriculture (USDA), the soils on site are comprised of Bale clay loam, (0 to 2 percent slopes), Diablo clay (5 to 15 percent slopes), Forward Gravelly loam (9 to 30 percent slopes), and Haire clay loam, (2 to 15 percent slopes). The project will require incorporation of best management practices and will be subject to the Napa County Stormwater Ordinance which addresses sediment and erosion control measures and dust control, as applicable.
- c/d. According to preliminary geologic mapping of the St. Helena Quandrangle performed by the California Geologic Survey (CGS-2004), the property is underlain by Pre-Quarternary, Early Tertiary Assemblages, and Clear Lake Volcanics deposits and bedrock and the majority of the site is underlain by undifferentiated Late Pleistocene and Holocene stream terrace deposits. Based on the Napa County Environmental Sensitivity Maps (liquefaction layer) the project site has a very low susceptibility for liquefaction on the entirety of the property. Development will be required to comply with all the latest building standards and codes, including the California Building Code that would reduce any potential impacts to the maximum extent possible.
- e. A Transient Non-Community Water System (a water system to serve the winery, visitors, and employees) is proposed as part of the project to serve the winery, visitors, and employees. The system will be designed by a licensed engineer and will be reviewed and approved by the Division of Environmental Health. There does not appear to be any limitation on this parcel's ability to support an on-site water system which will be able to support the proposed project.

<u>Mitigation Measures</u>: None required.

VII.	GREENHOUSE GAS EMISSIONS. Would the project:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporation	Less Than Significant Impact	No Impact
a)	Generate a net increase in greenhouse gas emissions in excess of applicable thresholds adopted by the Bay Area Air Quality Management District or the California Air Resources Board which may have a significant impact on the environment?				
b)	Conflict with a county-adopted climate action plan or another applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?			\boxtimes	

Discussion:

a/b. Overall increases in Greenhouse Gas (GHG) emissions in Napa County were assessed in the Environmental Impact Report (EIR) prepared for the Napa County General Plan Update and certified in June 2008. GHG emissions were found to be significant and unavoidable in that document, despite the adoption of mitigation measures incorporating specific policies and action items into the General Plan.

Consistent with these General Plan action items, Napa County participated in the development of a community-wide GHG emissions inventory and "emission reduction framework" for all local jurisdictions in the County in 2008-2009. This planning effort was completed by the Napa County Transportation and Planning Agency in December 2009, and served as the basis for development of a refined inventory and emission reduction plan for unincorporated Napa County.

In 2011, the Bay Area Air Quality Management District (BAAQMD) released California Environmental Quality Act (CEQA) Project Screening Criteria and Significance of Thresholds [1,100 metric tons per year (MT) of carbon dioxide and carbon dioxide equivalents (CO₂e)]. This threshold of significance is appropriate for evaluating projects in Napa County.

During our ongoing planning effort, the County requires project applicants to consider methods to reduce GHG emissions consistent with Napa County General Plan Policy CON-65(e). (Note: Pursuant to State CEQA Guidelines Section 15183, because this initial study assesses a project that is consistent with an adopted General Plan for which an environmental impact report (EIR) was prepared, it appropriately focuses on impacts which are "peculiar to the project," rather than the cumulative impacts previously assessed.)

The applicant proposes to incorporate GHG reduction methods including: generation of on-site renewable energy, solar hot water heating, energy conserving lighting, energy star roof/cool roof, water efficient fixtures, water efficient landscape, recycle 75% of all waste, compost 75% of food and garden material, planting of shade trees, local food production, use 70-80% cover crop, and a site design to optimize natural heating/cooling.

The proposed project has been evaluated against the BAAQMD thresholds and determined that the project would not exceed the 1,100 MT/yr of CO₂e. GHG Emission reductions from local programs and project level actions, such as application of the Cal Green Building Code, tightened vehicle fuel efficiency standards, and more project-specific on-site programs including those winery features noted above would combine to further reduce emissions below BAAQMD thresholds.

The increase in emissions expected as a result of the project will be relatively modest and the project is in compliance with the County's efforts to reduce emissions as described above. For these reasons, project impacts related to GHG emissions are considered less than significant.

			Potentially Significant Impact	Less Than Significant With Mitigation Incorporation	Less Than Significant Impact	No Impact
VIII.	HA	ZARDS AND HAZARDOUS MATERIALS. Would the project:				
	a)	Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?			\boxtimes	
	b)	Create a significant hazard to the public or the environment through reasonable foreseeable upset and accident conditions involving the release of hazardous materials into the environment?				
	c)	Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?				
	d)	Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?				
	e)	For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard for people residing or working in the project area?				
	f)	For a project within the vicinity of a private airstrip, or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard for people residing or working in the project area?				
	g)	Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?				

h)	Expose people or structures to a significant risk of loss, injury or death involving wild-land fires, including where wild-lands are adjacent to urbanized areas or where residences are intermixed with wild-lands?	Potentially Significant Impact	Less Than Significant With Mitigation Incorporation	Less Than Significant Impact	No Impact
Discussion:					

- a. The proposed project will not involve the transport of hazardous materials other than those small amounts normally used in winery operations. A Business Plan will be filed with the Environmental Health Division should the amount of hazardous materials reach reportable levels. However, in the event that the proposed use or a future use involves the use, storage or transportation of greater the 55 gallons or 500 pounds of hazardous materials, a use permit and subsequent environmental assessment would be required in accordance with the Napa County Zoning Ordinance prior to the establishment of the use. During construction of the project some hazardous materials, such as building coatings/ adhesives/ etc., will be utilized. However, given the quantities of hazardous materials and the limited duration, they will result in a less-than-significant impact.
- b. The project would not result in the release of hazardous materials into the environment.
- c. There are no schools located within one-quarter mile from the proposed project site.
- d. The proposed site is not on any known list of hazardous materials sites.
- e. The project site is not located within two miles of any public airport.
- f. The project site is not located within the vicinity of any private airports.
- g. The proposed project will not impair the implementation of or physically interfere with an adopted emergency response plan or evacuation plan.
- h. The project would not add any structures or people to any area that is adjacent to wildlands. The area around the project site is developed, with vineyards, residences, and wineries. The project will add structures and people to the site, and they could be at risk due to the future fires. The impacts of this exposure is less than significant as the site will have adequate emergency access for employees and visitors to exit the property, and for fire personnel to enter and contain any blaze.

IV	ШУГ	DDOLOGY AND WATER QUALITY Would the project.	Potentially Significant Impact	Less Than Significant With Mitigation Incorporation	Less Than Significant Impact	No Impact
IX.	HYL	DROLOGY AND WATER QUALITY. Would the project:				
	a)	Violate any water quality standards or waste discharge requirements?			\boxtimes	
	b)	Substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g., the production rate of pre-existing nearby wells would drop to a level which would not support existing land uses or planned uses for which permits have been granted)?				
	c)	Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, in a manner which would result in substantial erosion or siltation on- or off-site?				
	d)	Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site?				
	e)	Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?				

		Potentially Significant Impact	Less Than Significant With Mitigation Incorporation	Less Than Significant Impact	No Impact
f)	Otherwise substantially degrade water quality?				
g)	Place housing within a 100-year flood hazard area as mapped on a federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map?				
h)	Place within a 100-year flood hazard area structures which would impede or redirect flood flows?				\boxtimes
i)	Expose people or structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam?				
j)	Inundation by seiche, tsunami, or mudflow?				\boxtimes

On January 14, 2014 Governor Jerry Brown declared a drought emergency in the state of California. That declaration was followed up on April 1, 2015 when the Governor directed the State Water Resources Control Board to implement mandatory water reductions in cities and towns across California to reduce water usage by 25 percent. These water restrictions do not apply to agricultural users. At this time the County of Napa has not adopted or implemented any additional mandatory water use restrictions. The County requires all Use Permit applicants to complete necessary water analyses in order to document that sufficient water supplies are available for the proposed project. On June 28, 2011 the Board of Supervisors approved creation of a Groundwater Resources Advisory Committee (GRAC). The GRAC's purpose was to assist County staff and technical consultants with recommendations regarding groundwater, including data collection, monitoring, and well pump test protocols, management objectives, and community support. The County completed a county-wide assessment of groundwater resources (Napa County Groundwater Conditions and Groundwater Monitoring Recommendations Report (Feb. 2011)) and developed a groundwater monitoring program (Napa County Groundwater Monitoring Plan 2013 (Jan. 2013)). The County also completed a 2013 Updated Hydrogeologic Conceptualization and Characterization of Groundwater Conditions (Jan. 2013).

In general, recent studies have found that groundwater levels in the Napa Valley Floor exhibit stable long-term trends with a shallow depth to water. Historical trends in the Milliken-Sarco-Tulucay (MST) area, however, have shown increasing depths to groundwater, but recent stabilization in many locations. Groundwater availability, recharge, storage and yield is not consistent across the County. More is known about the resource where historical data have been collected. Less is known in areas with limited data or unknown geology. In order to fill existing data gaps and to provide a better understand of groundwater resources in the County, the Napa County Groundwater Monitoring Plan recommended 18 Areas of Interest (AOIs) for additional groundwater level and water quality monitoring. Through the well owner and public outreach efforts of the (GRAC) approximately 40 new wells have been added to the monitoring program within these areas. Groundwater Sustainability Objectives were developed and recommended by the GRAC and adopted by the Board. The recommendations included the goal of developing sustainability objectives, provided a definition, explained the shared responsibility for Groundwater Sustainability and the important role of monitoring as a means to achieving groundwater sustainability.

In 2009 Napa County began a comprehensive study of its groundwater resources to meet identified action items in the County's 2008 General Plan update. The study, by Luhdorff and Scalmanini Consulting Engineers (LSCE), emphasized developing a sound understanding of groundwater conditions and implementing an expanded groundwater monitoring and data management program as a foundation for integrated water resources planning and dissemination of water resources information. The 2011 baseline study by LSCE, which included over 600 wells and data going back over 50 years, concluded that "the groundwater levels in Napa County are stable, except for portions of the MST district". Most wells elsewhere within the Napa Valley floor with a sufficient record indicate that groundwater levels are more affected by climatic conditions, are within historical levels, and seem to recover from dry periods during subsequent wet or normal periods. The LSCE Study also concluded that, on a regional scale, there appear to be no current groundwater quality issues except north of Calistoga (mostly naturally occurring boron and trace metals) and in the Carneros region (mostly salinity). The County has no record of problems or complaints of diminished groundwater supplies at the project site or in the general vicinity.

Minimum thresholds for water use have been established by the Department of Public Works using reports by the United States Geological Survey (USGS). These reports are the result of water resources investigations performed by the USGS in cooperation with the Napa County Flood Control and Water Conservation District. Any project which reduces water usage or any water usage which is at or below the established threshold is assumed not to have a significant effect on groundwater levels.

a/b. The project is not expected to violate any water quality standards or waste discharge requirements nor substantially deplete local groundwater supplies. The project's development plans incorporate a Transient Non-Community Water System (a water system to serve

the winery, visitors, and employees). The current wells are 117 feet and 170 feet deep and produce at 25 and 60 gpm. The projected water use for the project is 4.27 AF/YR. Existing water use for residential purposes is 0.75 AF/YR and will remain the same with the proposed project. Current water use for the vineyard is 0.0 AF/YR as the vineyards are not irrigated with groundwater, but from the freshwater pond on site (State of California Water Resources Board Permit # 18829). Throughout the current prolonged drought the pond has been sufficient to supply the vineyards on the property, and currently has 45 AF of water available. In the event that the pond would be unable to provide the adequate water supplies for the vineyards, there is groundwater available to supplement. Additionally, the applicant has the ability to use reclaimed process wastewater in the event the pond fails to yield adequate water in the future. The winery is expected to use 2.27 AF/YR. Landscaping currently utilizes 2.0 AF/YR and will increase to 4.0 AF/YR. The existing vinevards are currently watered from the existing freshwater pond on site and will continue to be watered from that source, as such the vineyards are not included in either the existing or proposed water use. Due to the project's location on a hillside the applicant has submitted a Tier 1 Water Analysis Study prepared by Ludhorff & Scalmanini Consulting Engineers dated March 19, 2015. The study concluded that based on an average rainfall on the parcel was 29.54 inches or 410.5 AF/YR. This average rainfall was measured using precipitation data from 1998-2011, encompassing dry, normal, and wet years. Based on the soils on site it is expected that the groundwater recharge is estimated to be 39.6 AF/YR. The proposed water use of 11.06 AF/YR is well below the available groundwater of 39.6 AF/YR available to the site and no further analysis is needed. Additionally, there are no non-project wells within 500 feet. Below is a table that breaks down each source of existing and proposed water use:

WATER USE ESTIMATE CALCULATIONS					
	Estimated V (Acre- Feet				
	Existing	Proposed			
Residential Domestic Water Use					
Existing Residence	0.75	0.75			
Total Residential Domestic Water Use	0.75	0.75			
Winery Domestic & Process Water Use					
Winery - Daily Visitors	0.00	0.29			
Winery - Events with Meals Prepared	0.00	0.10			
Winery - Events with Catered Meals	0.00	0.01			
Winery - Employees	0.00	0.16			
Winery - Process	0.00	1.72			
Total Winery Water Use	0.00	2.27			
Existing Office Water Use					
Office Employees	0.04	0.04			
Irrigation Water Use					
Landscape	2.00	4.00			
Other Agriculture	4.00	4.00			
Total Irrigation Water Use	6.00	8.00			
Total Combined Water Use	6.79	11.06			

Notes:

- (1) 3 gallons of water per visitor is based on project wastewater disposal feasibility report by Applied Civil Engineering.
- (2) 15 gallons of water per guest is based on project wastewater disposal feasibility report by Applied Civil Engineering.
- (3) 5 gallons of water per guest is based on project wastewater disposal feasibility report by Applied Civil Engineering.
- (4) Napa County Phase 1 Water Availability Analysis Guidelines estimate 7 gallons of water per gallon of wine produced.
- c-e. The project proposal will not alter any drainage patterns on site or cause an increase in erosion on or off site. The project would be required to incorporate an erosion control plan to manage onsite surface drainage and erosion of onsite soils during construction and winter months (October to April). By incorporating a Standard Measures grading plan, this project would have a less than significant impact on drainage and siltation. There are no existing or planned stormwater systems that would be affected by this project.
- f. There is nothing included in this proposal that would otherwise substantially degrade water quality. As discussed in greater detail at, "a.," above, the Division of Environmental Health has reviewed the Transient Non-Community Water System proposal and has found the proposed system adequate to meet the facility's needs as conditioned. No information has been encountered that would indicate a substantial impact to water quality.

j.	The parcel is not located in an area that is subject to inundation by tsunamis, seiches, or mudflows.

XI.	MIN	ERAL RESOURCES. Would the project:				
	a)	Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?				
	b)	Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?				
Hudson	Viney	vards Winery: Use Permit P14-00202			Page 14 of	^f 21

The project site is not located within a flood hazard area, nor would it impede or redirect flood flows or expose structures or people to flooding. The project site is not located within a dam or levee failure inundation zone.

g-i.

a/b. Historically, the two most valuable mineral commodities in Napa County in economic terms have been mercury and mineral water. More recently, building stone and aggregate have become economically valuable. Mines and Mineral Deposits mapping included in the Napa County Baseline Data Report (*Mines and Mineral Deposits*, BDR Figure 2-2) indicates that there are no known mineral resources nor any locally important mineral resource recovery sites located on or near the project site.

Mitigation Measures: None required.

- a/b. The project will result in a temporary increase in noise levels during the brief construction of the project. Construction activities will be limited to daylight hours using properly muffled vehicles. Noise generated during this time is not anticipated to be significant. The project would not result in potentially significant temporary construction noise impacts or operational impacts. Given the proximity to the neighbors, the closest of whom is located over 2,700 feet away, there is a relatively low potential for impacts related to construction noise to result in a significant impact. Furthermore, construction activities would generally occur during the period of 7am-7pm on weekdays, during normal hours of human activity. All construction activities will be conducted in compliance with the Napa County Noise Ordinance (Napa County Code Chapter 8.16). The proposed project will not result in long-term significant construction noise impacts. Conditions of approval would require construction activities to be limited to daylight hours, vehicles to be muffled, and backup alarms adjusted to the lowest allowable levels.
- c/d. Noise from winery operations is generally limited; however, the proposed marketing plan could create additional noise impacts. The submitted marketing plan includes a number of events on a weekly, monthly and annual basis, some of which would include up to 150 visitors (3 per year). The Napa County Noise Ordinance, which was adopted in 1984, sets the maximum permissible received sound level for a rural residence as 45 db between the hours of 10 p.m. and 7 a.m. While the 45 db limitation is strict (45 db is roughly equivalent to the sound generated by a quiet conversation), the area surrounding the subject property is developed with few homes located in the immediate vicinity and with the nearest residence located 2,700 feet to the southwest. The proposed winery building is set back approximately 3,600 feet from the centerline of State Highway 12/121. Continuing enforcement of Napa County's Noise Ordinance by the Division of Environmental Health and the Napa County Sheriff, including the prohibition against amplified music, should ensure that marketing events and other winery activities do not create a significant noise impact. Events and music are required to finish by 10 p.m. every evening.
- e/f. The project site is not located within an airport land use plan or within two miles of a public airport or within the vicinity of a private airstrip.

- a/b. The project site is located along State Highway 12/121 which provides the only access to the project site driveway. The project includes the construction of a new 80,000 gallon/year winery, hospitality functions, and office uses. The site will accommodate up to 24 full-time employees on site with the ability to park 29 vehicles, with up to 120 daily visitors by appointment and a proposed marketing plan. Marketing activities would occur outside the weekday peak traffic periods (7:00-8:00 AM; 3:15-4:15 PM), and Saturday peak traffic periods (4:15-5:15 PM). Access to the proposed winery would be from both directions of State Highway 12/121. The proposed winery driveway would be 20-feet to meet County Standards. The applicant submitted a traffic study prepared by *Crane Transportation Group* dated April 27, 2015 along with the application. The traffic study evaluated the trip generation from the project as it relates to short-term (Year 2020) and long-term (Year 2030) conditions. The study found that there would be potentially significant impacts during Friday PM peak travel hours if both employee and visitor trips were to take place. In order to avoid any traffic impacts the applicant will schedule three different employee shifts to stagger the employees work hours to occur outside of peak travel periods. The production employees will arrive either the first shift from 5:30 AM to 1:00 PM, or the second shift from 11:00 AM to 7:30 PM. Hospitality employees will have their shift hours between 9:30 AM to 7:00 PM. These measures will reduce the number of trips taking place during the peak travel demand hours along State Highway 12/121 and will ensure the project's contribution, both individually and cumulatively will be less than significant. As such, the project shall implement the following mitigation measures to reduce the project's contribution to significant traffic impacts identified in the County General Plan EIR:
 - 1. Scheduling of employee work shifts to commence and conclude outside of peak periods between 7:00 a.m. and 8:00 a.m.; 4:15 p.m. and 5:15 p.m. weekdays, and 3:15 p.m. and 4:15 p.m. on Saturdays.
 - 2. Schedule marketing event set up, arrival and departure to occur outside of weekday and weekend peak traffic periods. Peak periods are between 7:00 a.m. and 8:00 a.m.; 4:15 p.m. and 5:15 p.m. weekdays, and 3:15 p.m. and 4:15 p.m. on Saturdays.

These mitigation measures will ensure the project does not contribute significantly or further exacerbate unacceptable traffic conditions on State Highway 12/121. Generally, the road network has ample capacity outside of peak afternoon periods. The proposed mitigation measures will shift trips out of peak periods and away from the congested roadways.

Traffic conditions on roads and at intersections are generally characterized by their "level of service" or LOS. LOS is a convenient way to express the ratio between volume and capacity on a given link or at a given intersection, and is expressed as a letter grade ranging from LOS A through LOS F. Each level of service is generally described as follows:

- LOS A- Free-flowing travel with an excellent level of comfort and convenience and freedom to maneuver.
- LOS B- Stable operating conditions, but the presence of other road users causes a noticeable, though slight, reduction in comfort, convenience, and maneuvering freedom.
- **LOS C-** Stable operating conditions, but the operation of individual users is substantially affected by the interaction with others in the traffic stream.
- LOS D- High-density, but stable flow. Users experience severe restrictions in speed and freedom to maneuver, with poor levels of comfort and convenience.
- LOS E- Operating conditions at or near capacity. Speeds are reduced to a low but relatively uniform value. Freedom to maneuver is difficult with users experiencing frustration and poor comfort and convenience. Unstable operation is frequent, and minor disturbances in traffic flow can cause breakdown conditions.
- LOS F- Forced or breakdown conditions. This condition exists wherever the volume of traffic exceeds the capacity of the roadway. Long queues can form behind these bottleneck points with queued traffic traveling in a stop-and-go fashion. (2000 Highway Capacity Manual, Transportation Research Board)

State Highway 12/121 currently operates at a LOS F during both weekday and weekend peak hour trips. Prior to submittal of this application CalTrans made roadway improvements along State Highway 12/121, including the installation of a left turn lane in to the project driveway. The applicant's traffic study prepared by *Crane Transportation Group*, dated April 27, 2015 analyzed impacts of the winery's operations at full capacity and marketing and concluded that the increases in trips would not pose any significant impacts to State Highway 12/121. The contribution of the project's traffic to peak trips is less than 1% to the existing traffic volume. Additionally, the study concluded that sightlines in and out of the project driveway were adequate, and that the proposed traffic would not be a hazard to bicyclists or pedestrians. The study concludes that on both a short term (Year 2020) and long term (Year 2030) horizon the project will not create significant traffic impacts. Both individually and cumulatively the contribution to traffic volumes will be less than 1%. As State Highway 12/121 is already at LOS F, the project's

contribution to the existing and future volumes will be less than 1%. Based on the findings of the submitted traffic study the project's contribution to traffic would be less than significant.

- c. This proposed project would not result in any change to air traffic patterns.
- d.-e. Access to the proposed winery will be from State Highway 12/121, onto the site and would meet County Road and Street Standards and CALTRANs requirements. The project would result in no significant off-site circulation system operational impacts nor any sight line impacts at the proposed project driveway.
- e. The project proposes a total of 29 parking spaces. These parking spaces would be sufficient to accommodate parking needs during normal business days for employees and visitors. Additional parking will be required for the larger marketing events, the applicant will provide valet services for larger events with parking along vineyard rows and other suitable areas on the site. No parking will be permitted within the right-of-way of State Highway 12/121.
- g. There is no aspect of this proposed project that would conflict with any adopted policies, plans or programs supporting alternative transportation.

Mitigation Measures:

XVI.1 - Prior to the issuance of a Certificate of Final Occupancy for any Winery component, the applicant/permittee shall submit a transportation demand program for review and approval by the Director of Planning, Building and Environmental Services. Upon approval of the transportation demand program, the applicant shall implement the following mitigation measures:

- 1. Scheduling of employee work shifts to commence and conclude outside of peak periods between 7:00 a.m. and 8:00 a.m.; 4:15 p.m. and 5:15 p.m. weekdays, and 3:15 p.m. and 4:15 p.m. on Saturdays.
- 2. Schedule marketing event set up, arrival and departure to occur outside of weekday and weekend peak traffic periods. Peak periods are between 7:00 a.m. and 8:00 a.m.; 4:15 p.m. and 5:15 p.m. weekdays, and 3:15 p.m. and 4:15 p.m. on Saturdays.

			Potentially Significant Impact	Less Than Significant With Mitigation Incorporation	Less Than Significant Impact	No Impact
XVI.	UTI	ILITIES AND SERVICE SYSTEMS. Would the project:			,	
	a)	Exceed wastewater treatment requirements of the applicable Regional Water Quality Control Board?			\boxtimes	
	b)	Require or result in the construction of a new water or wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?				
	c)	Require or result in the construction of a new storm water drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?			\boxtimes	
	d)	Have sufficient water supplies available to serve the project from existing entitlements and resources, or are new or expanded entitlements needed?			\boxtimes	
	e)	Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing compilments?	_	_	_	_
		projected demand in addition to the provider's existing commitments?			\boxtimes	
	f)	Be served by a landfill with sufficient permitted capacity to accommodate the project's solid waste disposal needs?			\boxtimes	
	g)	Comply with federal, state, and local statutes and regulations related to solid waste?			\boxtimes	

- a. The project will not exceed wastewater treatment requirements of the Regional Water Quality Control Board and will not result in a significant impact.
- b. The project will not require construction of any new water treatment facilities that will result in a significant impact to the environment. Water will be provided by either the existing well or a new well, it cannot be established that the existing well has the necessary seal. A new wastewater system will be constructed on site. The system will be designed by a licensed engineer and will be reviewed and approved by the Division of Environmental Health.
- c. The project will not require or result in the construction of new storm water drainage facilities or expansion of existing facilities, which will cause a significant impact to the environment.
- d. The project has sufficient water supplies to serve projected needs. The projected water use for the project is 4.27 AF/YR. The submitted groundwater study submitted by *Ludhorff & Scalmanini Consulting Engineers* has established a threshold of 39.6 AF/YR for this parcel; therefore the total estimated water demand of 11.06 AF/YR is below the threshold established for the parcel. No further analysis is required.
- e. Wastewater will be treated on-site and will not require a wastewater treatment provider.
- f. The project will be served by a landfill with sufficient capacity to meet the projects demands. No significant impact will occur from the disposal of solid waste generated by the project.
- g. The project will comply with federal, state, and local statutes and regulations related to solid waste.

Mitigation Measures: None required.

XVII.	MA	NDATORY FINDINGS OF SIGNIFICANCE	Potentially Significant Impact	Less Than Significant With Mitigation Incorporation	Less Than Significant Impact	No Impact
	a)	Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?			\boxtimes	
	b)	Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?			\boxtimes	
	c)	Does the project have environmental effects that will cause substantial adverse effects on human beings, either directly or indirectly?				\boxtimes

Discussion:

- a. The project as proposed will not degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory.
- b. The project does not have impacts that are individually limited, but cumulatively considerable. Potential air quality, greenhouse gas emissions, hydrology, and traffic impacts are discussed in the respective sections above. The project would also increase the demands for public services to a limited extent, increase traffic and air pollutions, all of which contribute to cumulative effects when future development in Napa Valley is considered. Cumulative impacts of these issues are discussed in previous sections of this Initial Study, wherein the impact from an increase in air pollution is being addressed as discussed in the project's Greenhouse Gas Voluntary Best Management

Practices including but not limited to generation of on-site renewable energy, solar hot water heating, energy conserving lighting, energy star roof/cool roof, water efficient fixtures, water efficient landscape, recycle 75% of all waste, compost 75% of food and garden material, planting of shade trees, local food production, use 70-80% cover crop, and a site design to optimize natural heating/cooling.

Potential impacts are discussed in the respective sections above. The project trip generation was calculated from winery operations, where the calculated trips reflect total visitation, on-site employees and wine production trips generated by the winery. Under the Napa County General Plan, traffic volumes are projected to increase and will be caused by a combination of locally generated traffic as well as general regional growth. The General Plan EIR indicates that much of the forecasted increase in traffic on the arterial roadway network will result from traffic generated outside of the county, however the project will contribute a small amount toward the general overall increase.

General Plan Policy CIR-16 states that "The County will seek to maintain an arterial Level of Service D or better on all County roadways, except where the level of Service already exceeds this standard and where increased intersection capacity is not feasible without substantial additional right of way." State Highway 12/121 is listed as two-lane Rural Throughways on the General Plan Circulation Map and already operates at a LOS F. As discussed above under Section XVI Transportation, implementation of the employee scheduling mitigation measure to eliminate the project's additional traffic at the peak hours will serve avoid a deterioration of the level of service on Highway 12/121 by adding less than 1% to the existing volume, reducing potential cumulative impact to a level of less than significant.

c. There are no environmental effects caused by this project that would result in substantial adverse effects on human beings, whether directly or indirectly. No hazardous conditions resulting from this project have been identified. The project would not have any environmental effects that would result in significant impacts.
