## Traffic Study

## TRAFFIC IMPACT REPORT

# RAYMOND-TICEN RANCH WINERY 

August 26, 2016

Prepared for: RAYMOND-TICEN RANCH WINERY
Prepared by: Mark D. Crane, P.E.
California Registered Traffic Engineer (\#1381) CRANE TRANSPORTATION GROUP
2621 E. Windrim Court
Elk Grove, CA 95758
(916) 647-3406

## I. INTRODUCTION

This report has been prepared at the request of the proposed Raymond-Ticen Ranch Winery to determine whether proposed changes to the existing Raymond Vineyards Winery will result in any significant circulation impacts to the local roadway network. The Raymond Vineyards Winery will be changing names to the Raymond-Ticen Ranch Winery as part of the project. The scope of analysis has been discussed with and approved by County staff and includes evaluation of major intersections as well as SR 29, Silverado Trail and Zinfandel Lane operation near the project site for Existing, Year 2020 and year 2030 horizons (see Figure 1).

## II. PROPOSED PROJECT SUMMARY

The proposed project will be comprised of the following three components.

- Provision of a new winery entrance on the east side of SR 29 about 600 feet south of the Whitehall Lane intersection at the existing Ticen Family Vineyard driveway connection to the state highway. This entrance will connect internally to the existing Raymond Vineyards driveway along Zinfandel Lane.
- Traffic impacts due to 64 employees. These staff are already working at Raymond Vineyards Winery. However, they exceed the currently permitted 26 employee level. Therefore, their traffic impact has been included as part of the project.
- Construction of a left turn lane on the westbound Zinfandel Lane approach to the existing Raymond driveway.

There will be no change in production level, number of trucks, number of visitors by appointment or marketing events with the proposed project.

## III. SCOPE OF SERVICES

The scope of service for this traffic study was developed in consultation with the Napa County Public Works and Planning, Building \& Environmental Sciences departments to determine the extent of any significant circulation impacts (positive or negative) due to the proposed project. Evaluation was conducted for harvest Friday AM and PM commute and Saturday afternoon peak traffic conditions. Historical traffic count information for SR 29 indicates that there are higher volumes during this time period than during all other times of the year. Existing, year 2020 and year 2030 (Cumulative - General Plan Buildout) operating conditions were evaluated both with and without project traffic along State Route 29-128 (SR 29), Zinfandel Lane and Silverado Trail. In addition, operating conditions were also evaluated at the project driveway intersections with SR 29 and Zinfandel Lane as well as at the Zinfandel Lane intersections with SR 29 and Silverado Trail based upon significance criteria contained in the General Plan and/or utilized in all recent County traffic studies. Finally, sight line adequacy was evaluated at the project
driveway intersections with SR 29 and Zinfandel Lane. Significant impacts, if any, were identified and measures listed, if needed, to mitigate all impacts to a less than significant level.

## IV. SUMMARY OF FINDINGS

## A. "WITHOUT PROJECT" OPERATING CONDITIONS

## 1. Existing Volumes - Harvest 2015

SR 29 adjacent to the proposed project site now has higher September harvest two-way traffic volumes during the Saturday PM peak traffic hour compared to either the Friday AM or Friday PM peak traffic hours (about 1,985 two-way peak hour vehicles from 3:15 to 4:15 PM on Saturday versus 1,470 two-way peak hour vehicles from 8:00 to 9:00 AM on Friday or 1,845 two-way peak hour vehicles from 3:15 to 4:15 PM on Friday). Zinfandel Lane adjacent to the project site now has higher September harvest two-way traffic volumes during the Friday PM peak traffic hour compared to either the Friday AM or Saturday PM peak traffic hours (about 405 two-way peak hour vehicles from 3:15 to $4: 15$ PM on Friday versus 295 two-way peak hour vehicles from 8:00 to 9:00 AM on Friday or 365 two-way peak hour vehicles from 3:15 to 4:15 PM on Saturday). The driveway serving the project site on Zinfandel Lane had a total of 47 vehicles during the Friday AM peak hour, 66 vehicles during the Friday PM peak hour and 78 vehicles during the Saturday PM peak hour.

## 2. Planned \& Ongoing Roadway Improvements

Caltrans is currently widening SR 29 between Mee Lane and Charter Oak Avenue in St. Helena (including along the proposed project frontage). This improvement will provide a continuous two-way left turn lane in the median that will be used by southbound traffic turning left into the project driveway and as a median refuge area for vehicles turning left from the project driveway.

## 3. Year 2015 Harvest "Without Project" Circulation System Operation

- SR 29/Zinfandel Lane intersection - unacceptable level of service during the Friday AM \& PM and Saturday PM peak hours.
- Silverado Trail/Zinfandel Lane intersection - unacceptable level of service during the Friday and Saturday PM peak hours.
- SR 29 roadway segments - Friday AM peak hour acceptable operation at all locations, but unacceptable Friday and Saturday PM peak hour southbound operation north of Zinfandel Lane and south of the project driveway as well as unacceptable Saturday PM peak hour northbound operation south of the project entrance.
- Silverado Trail roadway segments - Friday AM and Saturday PM peak hour acceptable operation at all locations, but unacceptable Friday PM peak hour southbound operation north and south of Zinfandel Lane.
- Zinfandel Lane roadway segments - acceptable operation during all time periods at all locations.

## 4. Year 2020 Harvest Without Project Circulation System Operation

- SR 29/Zinfandel Lane intersection - unacceptable level of service during the Friday AM \& PM and Saturday PM peak hours.
- Silverado Trail/Zinfandel Lane intersection - unacceptable level of service during the Friday and Saturday PM peak hours.
- SR 29 roadway segments - Friday AM peak hour unacceptable northbound operation south of the project driveway. Friday PM peak hour unacceptable operation on all segments except northbound north of Zinfandel Lane and Saturday PM peak hour unacceptable operation on all segments.
- Silverado Trail roadway segments - Friday AM and Saturday PM peak hour acceptable operation at all locations, but unacceptable Friday PM peak hour southbound operation north and south of Zinfandel Lane.
- Zinfandel Lane roadway segments - acceptable operation during all time periods at all locations.

## 5. Year 2030 Cumulative Harvest Without Project Circulation System Operation

- SR 29/Zinfandel Lane intersection - unacceptable level of service during the Friday AM \& PM and Saturday PM peak hours.
- Silverado Trail/Zinfandel Lane intersection - unacceptable level of service during the Friday AM \& PM and Saturday PM peak hours.
- SR 29 roadway segments - Friday AM peak hour unacceptable northbound operation south of the project driveway and north of Zinfandel Lane; Friday and Saturday PM peak hours unacceptable operation on all segments.
- Silverado Trail roadway segments - Friday AM peak hour acceptable operation at all locations. Friday PM peak hour unacceptable operation at all locations except northbound to the south of Zinfandel Lane and Saturday PM peak hour acceptable operation at all locations except southbound south of Zinfandel Lane.
- Zinfandel Lane roadway segments - acceptable operation during all time periods at all locations.

## B. PROJECT IMPACTS

## 1. Project Trip Generation

The 64 employees now considered part of the project would add traffic to the local roadway network. However, shift change schedules would significantly reduce additional traffic during the harvest Friday and Saturday peak traffic hours.

Harvest project trip generation expected during the peak traffic hours on the local circulation system is as follows.

| FRIDAY AM PEAK HOUR TRIPS |  | FRIDAY PM <br> PEAK HOUR TRIPS |  | SATURDAY AFTERNOON PEAK HOUR TRIPS |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| IN | OUT | IN | OUT | IN | OUT |
| 7 | 5 | 3 | 7 | 0 | 5 |

2. New Project Access to SR 29

The project is proposing access to SR 29 on the east side of the highway about 600 feet south of the Whitehall Lane intersection at the existing Ticen Family Vineyard driveway connection to the state highway. Opening access to the Raymond-Ticen Ranch operation from SR 29 should reduce existing Raymond peak hour traffic along Zinfandel Lane and Silverado Trail as well as SR 29 just north of the new entrance. Overall, the combination of the project's new employees and the new SR 29 access will result in the following changes in peak hour traffic along Zinfandel Lane.

## CHANGE IN TRAFFIC ALONG ZINFANDEL LANE DUE TO THE PROPOSED PROJECT

| TIME | NEAR SR 29 | NEAR SILVERADO TRAIL |
| :--- | :---: | :---: |
| Friday AM Peak Hour | -2 vehicles | +5 vehicles |
| Friday PM Peak Hour | -17 vehicles | no change |
| Saturday PM Peak Hour | -14 vehicles | +1 vehicle |

## 3. Year 2015 Existing + Project Off-Site Circulation Impacts

The proposed project would not result in any significant off-site circulation impacts to SR 29, Silverado Trail or Zinfandel Lane or to the SR 29/Zinfandel Lane or Silverado Trail/Zinfandel Lane intersections. The project would not degrade operation from acceptable to unacceptable at any analyzed location or increase peak hour volumes by 1 percent or greater at any location already experiencing unacceptable "Without Project" operation.

## 4. Year 2020 + Project Off-Site Circulation Impacts

The proposed project would not result in any significant off-site circulation impacts to SR 29, Silverado Trail or Zinfandel Lane or to the SR 29/Zinfandel Lane or Silverado Trail/Zinfandel Lane intersections. The project would not degrade operation from acceptable to unacceptable at any analyzed location or increase peak hour volumes by 1 percent or greater at any location already experiencing unacceptable "Without Project" operation.

## 5. Year 2030 Cumulative + Project Off-Site Circulation Impacts

The proposed project would not result in any significant off-site circulation impacts to SR 29, Silverado Trail or Zinfandel Lane or to the SR 29/Zinfandel Lane or Silverado

Trail/Zinfandel Lane intersections. The project would not degrade operation from acceptable to unacceptable at any analyzed location or increase peak hour volumes by 1 percent or greater at any location already experiencing unacceptable "Without Project" operation.

## 6. Sight Lines at Project Driveways

Sight lines at the proposed project's driveway connections to SR 29 and at the existing driveway connection to Zinfandel Lane meet minimum stopping sight distance criteria based upon the Caltrans March 2014 Highway Design Manual.

## 7. Mitigations

No mitigations are required.

## C. CONCLUSIONS \& RECOMMENDATIONS

The project will result in no significant off-site circulation system operational impacts to SR 29, Silverado Trail or Zinfandel Lane nor to the Zinfandel Lane intersections with SR 29 and Silverado Trail. Left turn lanes will be provided on the Zinfandel Lane and SR 29 approaches to both project driveways, and a refuge area will be provided in the SR 29 median to assist left turns from the new project driveway. In addition, sight lines at the project driveway connections to SR 29 and Zinfandel Lane are acceptable and meet Caltrans stopping sight distance criteria.

## V. PROJECT LOCATION \& DESCRIPTION

The proposed Raymond-Ticen Ranch Winery (currently the Raymond Vineyards Winery) is located on the south side of Zinfandel Lane about a third of a mile east of SR 29. As part of the project, the existing property will expand and extend to the south and west and will border the east side of SR 29 just south of Whitehall Lane (see Figure 2). The three components of the project for the traffic analysis are as follows:

- A winery entrance will be provided along SR 29 and will connect internally to the existing Raymond Vineyards driveway along Zinfandel Lane. The entrance will be at the existing Ticen Family Vineyard driveway connection to the state highway. Caltrans is currently widening SR 29 along the project frontage to provide a median continuous twoway left turn lane which will be used by winery traffic.
- For analysis purposes, in addition to the new entrance along SR 29, 64 of the existing 90 employees now at the Raymond Vineyards winery will also be considered part of "The Project" as they exceed the currently permitted 26 employees.
- A left turn lane will be provided on the westbound Zinfandel Lane approach to the existing Raymond driveway.

The number of new employees by category and their proposed work schedule on a Friday and Saturday during harvest are presented below.

## PROJECT NEW EMPLOYEES DURING HARVEST (FOR ANALYSIS PURPOSES)

| EMPLOYEE CATEGORY (FULL \& PART TIME) | FRIDAY |  | SATURDAY |  |
| :---: | :---: | :---: | :---: | :---: |
|  | \# | SCHEDULE | \# | SCHEDULE |
| Administration \& Marketing | 19 | $\begin{gathered} \hline \text { 8:00 AM- } \\ \text { 5:00 PM } \\ \hline \end{gathered}$ | 0 | NA |
| Production | 28 | $\begin{aligned} & \text { 6:00 AM- } \\ & \text { 2:30 PM } \\ & \hline \end{aligned}$ | 28 | $\begin{gathered} \text { 6:00 AM- } \\ \text { 2:30 PM } \\ \hline \end{gathered}$ |
| Hospitality | 17 | $\begin{gathered} \text { 9:30 AM- } \\ \text { 6:00 PM } \end{gathered}$ | 17 | $\begin{gathered} \text { 9:30 AM- } \\ \text { 6:00 PM } \end{gathered}$ |
| TOTAL | 64 |  | 45 |  |

Source: Raymond-Ticen Ranch applicant
It should be noted that "The Project" does not include any increase in production, daily visitation by appointment, truck traffic or new marketing events.

## VI. EXISTING CIRCULATION SYSTEM EVALUATION PROCEDURES

## A. ANALYSIS LOCATIONS

The following locations have been evaluated.

1. SR 29/Zinfandel Lane intersection (The Zinfandel Lane approaches are stop sign controlled.)
2. Silverado Trail/Zinfandel Lane intersection (The Zinfandel Lane eastbound approach is stop sign controlled.)
3. SR 29/Project Driveway intersection (proposed)
4. Zinfandel Lane/Project Driveway intersection
5. SR 29 two-lane highway segments just north of Zinfandel Lane and south of the Project Driveway

## 6. Silverado Trail two-lane highway segments just north and south of Zinfandel Lane

## 7. Zinfandel Lane roadway segments east of SR 29 and west of Silverado Trail.

Figure 3 presents a schematic of approach lane geometrics and control at each analysis intersection.

## B. VOLUMES

## 1. ANALYSIS SEASONS AND DAYS OF THE WEEK

Project traffic impacts have been evaluated during harvest conditions. Based upon more than four years of historical information from Caltrans PeMS (Performance Measurement System) count surveys along SR 29 in the Napa Valley, September has the highest daily volumes of the year (during harvest), with August having the highest summer non-harvest daily volumes of the year. Since August counts were almost as high as September counts, only harvest conditions were selected for evaluation.

In regards to the peak traffic days of the week, the recently released Napa County Travel Behavioral Study ${ }^{1}$ shows that the highest weekday volumes in Napa Valley occur on a Friday, with the highest weekend volumes occurring on a Saturday. In addition, historical count data from the City of Napa show that Friday has the highest volumes of any weekday, while Caltrans historical counts for SR 29 between St. Helena and Napa also show that weekday AM and PM peak hour volumes are higher on a Friday than on either a Wednesday or Thursday. Therefore, Friday and Saturday peak traffic conditions were evaluated in this study.

## 2. COUNT RESULTS

Friday 7:00 to 9:00 AM and 3:00 to 6:00 PM as well as Saturday 1:00 to 6:00 PM turn movement counts were conducted by Crane Transportation Group (CTG) in August 2015 at the SR 29/Zinfandel Lane, Silverado Trail/Zinfandel Lane, Zinfandel Lane/Raymond Vineyards entrance and SR 29/existing site access intersections. The peak traffic hours for the system were determined to be $8: 00$ to 9:00 AM and 3:00 to 4:00 PM on Friday and 3:15 to $4: 15 \mathrm{PM}$ on Saturday. Resultant August 2015 peak hour counts are presented in Appendix Figures 1 and 2. Overall, two-way volumes along SR 29 at the future project entrance were highest during the August Saturday PM peak traffic hour ( 1,985 vehicles on Saturday versus 1,470 vehicles during the Friday AM peak hour and 1,845 vehicles during the Friday PM peak hour). Volumes along Zinfandel Lane at the existing Raymond Vineyards entrance were highest during the August Friday PM peak traffic hour ( 405 vehicles on Friday versus 295 vehicles during the Friday AM peak hour and 365 vehicles during the Saturday PM peak hour). The peak traffic hours at each analysis location occasionally varied by 15 to 30 minutes. In these cases the highest volumes in the same general time period were used for analysis purposes.

[^0]
## 3. SEASONAL ADJUSTMENTS

August 2015 peak hour traffic counts were seasonally adjusted to reflect September harvest conditions. Historical traffic count data from Caltrans PeMS system as well as past studies, extending back to the Wine Train EIR in 1992, were utilized to determine the seasonal difference in August versus September weekday and weekend peak hour volumes. While some sources showed August volumes at a few locations in the Napa Valley being the same or a little higher than those in September, overall it was determined that September volumes at the vast majority of locations were slightly higher than August volumes by the following factors.

|  | September Compared to <br> August Peak Hour Volumes |
| :--- | :---: |
| Weekday | $+1 \%$ |
| Saturday | $+2 \%$ |

## 4. ADJUSTMENTS REFLECTING ONLY 26, NOT 90, EMPLOYEES

For analysis purposes Raymond Vineyards traffic volumes were adjusted to reflect trip generation only from the permitted 26 employees, and not the 90 employees currently working at the winery. The increment of traffic from the 64 employees that will become part of "The Project" was removed from the existing 2015 harvest projections to reflect traffic activity with current levels of visitation, but only 26 employees.

Resultant 2015 Friday AM and PM and Saturday PM peak hour harvest volumes with only 26 winery employees are presented in Figures 4 and 5.

## C. ROADWAYS

Roadway descriptions are based upon the designation that SR 29 and Silverado Trail run in a general north-south direction through the project area and Zinfandel Lane runs in an east-west direction. The project site is along the east side of the state highway and south side of Zinfandel Lane.

State Route 29-128 (SR 29) is an arterial roadway extending the length of Napa County. It has two travel lanes from the City of Yountville to the Lake County line and four lanes to the south of Yountville. Adjacent to the project site it has two well-paved 12-foot travel lanes and eight-foot-wide paved shoulders. The posted speed limit is 50 miles per hour and the roadway is level and straight. About 300 feet north of the proposed site access there is the beginning of a gentle curve to the west just south of Whitehall Lane where the Napa Wine Train has an at-grade crossing that is protected by gates and flashing lights. Farther north SR 29 maintains its level and straight alignment through the Zinfandel Lane intersection. SR 29 is not controlled on its approaches to Zinfandel Lane, although left turn lanes are provided on both intersection approaches.

Silverado Trail in the project vicinity has two well-paved 12-foot travel lanes and wide paved shoulders that are utilized as Class II bicycle lanes. A left turn lane is provided on the northbound Silverado Trail approach to Zinfandel Lane. The posted speed limit is 55 miles per hour at Zinfandel Lane, but lowers to 45 miles per hour northbound and 40 miles per hour southbound north of Zinfandel Lane.

Zinfandel Lane is a two-lane rural collector roadway extending westerly from Silverado Trail to the west of SR 29. It is stop sign controlled on its eastbound approach to Silverado Trail and on both approaches to SR 29. The posted speed limit is 45 miles per hour. The Napa Wine Train has an at-grade crossing of Zinfandel Lane just east of SR 29. Its crossing is protected by gates and flashing lights.

## D. INTERSECTION LEVEL OF SERVICE

## 1. ANALYSIS METHODOLOGY

Transportation engineers and planners commonly use a grading system called level of service (LOS) to measure and describe the operational status of the local roadway network. LOS is a description of the quality of a roadway facility's operation, ranging from LOS A (indicating free-flow traffic conditions with little or no delay) to LOS F (representing oversaturated conditions where traffic flows exceed design capacity, resulting in long queues and delays). Intersections, rather than roadway segments between intersections, are almost always the capacity controlling locations for any circulation system.

Unsignalized Intersections. For unsignalized (all-way stop-controlled and side-street stopcontrolled) intersections, the 2010 Highway Capacity Manual (Transportation Research Board, National Research Council) methodology for unsignalized intersections was utilized. For sidestreet stop-controlled intersections, operations are defined by the level of service and average control delay per vehicle (measured in seconds), with delay reported for the stop sign controlled approaches or turn movements, although overall delay is also typically reported for intersections along state highways. For all-way stop-controlled intersections, operations are defined by the average control delay for the entire intersection (measured in seconds per vehicle). The delay at an unsignalized intersection incorporates delay associated with deceleration, acceleration, stopping, and moving up in the queue. It should be noted that the 2010 analysis software for unsignalized intersections does not report overall intersection delay. However, the year 2000 software does report overall delay and was utilized to report overall intersection operation. Table 1 summarizes the relationship between delay and LOS for unsignalized intersections.

## 2. MINIMUM ACCEPTABLE OPERATION

Napa County has no published minimum level of service standards for unsignalized public road or private driveway intersections. The County General Plan (Policy CIR-16) states that the County shall seek to maintain an arterial Level of Service D or better on all County roadways except where maintaining this desired level of service would require installation of more travel lanes than shown on the Circulation Map. For this study, LOS D has been used for unsignalized
intersections as the poorest acceptable operation for the entire intersection, with LOS E as the poorest acceptable operation for a side street stop sign controlled intersection approach. The reason for use of LOS E as the criteria for individual movements and LOS D as the criteria for the overall intersection is that the poorest operation at an unsignalized intersection is typically a specific stop sign controlled movement, unless side street volumes are high, in which case both the overall intersection and stop sign controlled movement are LOS F. Stop sign controlled intersections along Silverado Trail with low volumes of side street traffic tend to have poor stop sign controlled levels of service, but good to acceptable overall operation. As side street volumes increase, overall intersection operation also tends to degrade, but will usually remain one or more levels of service better than the stop sign controlled movement. When overall operation also degrades to LOS E or F operation, it is an indication of large volumes on the stop sign controlled approach, and the potential need for intersection signalization. The combined use of both criteria allows the County to identify those stop sign controlled intersections that have unacceptable delay for side street traffic as well as a sufficient amount of side street traffic that may meet signal warrant criteria levels.

## E. ROADWAY SEGMENT LEVEL OF SERVICE

## 1. ANALYSIS METHODOLOGY

Roadway segment operation for SR 29, Silverado Trail and Zinfandel Lane has been evaluated based upon criteria developed for Napa County roadways as part of the County General Plan Update in 2007: Napa County General Plan Update EIR - Technical Memorandum for Traffic and Circulation Supporting the Findings and Recommendations by Dowling Associates, February 2007. Table 5 in this report, "Peak Hour Roadway Capacities," shows the following directional capacity limit-level of service relationships for a two-lane rural highway (such as SR 29 or Silverado Trail) as well as for a two-lane collector roadway (such as Zinfandel Lane).

|  |  | LOS A | LOS B | LOS C | LOS D | LOS E |
| :--- | :--- | :---: | :---: | :---: | :---: | :---: |
| Highway <br>  <br> Silverado Trail) | Maximum Peak <br> Direction Volumes | 100 | 330 | 620 | 870 | 1200 |
|  | Volume/Capacity <br> Ratio | Maximum Peak <br> Direction Volumes | 73 | $(.08)$ | 97 | 480 |
|  | 760 | 810 |  |  |  |  |
|  | Volume/Capacity <br> Ratio | $(.09)$ | $(.12)$ | $(.59)$ | $(.94)$ | $(1.00)$ |

## 2. MINIMUM ACCEPTABLE OPERATION

Level of service D (LOS D) is the poorest acceptable roadway segment operation in Napa County.

## F. PLANNED IMPROVEMENTS

There are no planned and funded improvements at any location evaluated in this study ${ }^{2}$ other than the current widening of SR 29 from Mee Lane to Charter Oak Avenue in St. Helena that will provide a continuous two-way left turn lane along the project frontage.

## VII. FUTURE HORIZON TRAFFIC VOLUME PROJECTIONS

Traffic analysis has been conducted for existing (2015), year 2020 and cumulative year 2030 horizons at County request. The 2030 cumulative horizon reflects the County General Plan Buildout year. Traffic modeling for the General Plan shows the following growths in two-way traffic between 2015 and 2030 for the following roadways.

| Route | 2015 to 2030 Projected Growth in Weekday Traffic |  |
| :--- | :--- | :--- |
| SR 29 | AM peak hour $=22-23 \%$ | PM peak hour $=27-28 \%$ |
| Silverado Trail | AM peak hour $=36 \%$ | PM peak hour $=27 \%$ |
| Zinfandel Lane | AM peak hour $=12-13 \%$ | PM peak hour $=18-21 \%$ |

Projecting straight line traffic growth for analysis purposes, this translates into the following growths in two-way traffic between 2015 and 2020 for the same roadways.

| Route | 2015 to 2020 Projected Growth in Weekday Traffic |  |
| :--- | :--- | :--- |
| SR 29 | AM peak hour $=7-8 \%$ | PM peak hour $=9-10 \%$ |
| Silverado Trail | AM peak hour $=12 \%$ | PM peak hour $=9 \%$ |
| Zinfandel Lane | AM peak hour $=4-5 \%$ | PM peak hour $=6-7 \%$ |

Since traffic modeling projections were only available for weekday AM and PM peak hour conditions and not for the Saturday PM peak hour, Saturday two-way PM peak hour volumes were increased by the percentages found for the weekday PM peak hour.

Resultant year 2020 harvest "Without Project" Friday and Saturday peak hour volumes are presented in Figures 6 and 7, respectively, while year 2030 harvest "Without Project" Friday and Saturday peak hour volumes are presented in Figures 8 and 9, respectively.

## VIII. OFF-SITE CIRCULATION SYSTEM OPERATION <br> - WITHOUT PROJECT

## 1. EXISTING (2015) OPERATING CONDITIONS (WITHOUT PROJECT)

## A. HARVEST

1. INTERSECTION LEVEL OF SERVICE - Table 2
a) SR 29/ZINFANDEL LANE
1) Friday AM Peak Hour

Acceptable overall intersection operation: LOS A
Acceptable Zinfandel Lane stop sign controlled westbound approach: LOS E
2) Friday PM Peak Hour

Unacceptable overall intersection operation: LOS E
Unacceptable Zinfandel Lane stop sign controlled eastbound and westbound approaches:
LOS F
3) Saturday PM Peak Hour

Unacceptable overall intersection operation: LOS E
Unacceptable Zinfandel Lane stop sign controlled eastbound and westbound approaches: LOS F
b) SILVERADO TRAIL/ZINFANDEL LANE

1) Friday AM Peak Hour

Acceptable overall intersection operation: LOS A
Acceptable Zinfandel Lane stop sign controlled eastbound approach: LOS D
2) Friday PM Peak Hour

Unacceptable overall intersection operation: LOS F
Unacceptable Zinfandel Lane stop sign controlled eastbound approach: LOS F
3) Saturday PM Peak Hour

Acceptable overall intersection operation: LOS C
Unacceptable Zinfandel Lane stop sign controlled eastbound approach: LOS F

## 2. ROADWAY SEGMENT LEVEL OF SERVICE - Table 3

## a) $\quad$ SR 29

1) Friday AM Peak Hour

Acceptable operation north of Zinfandel Lane and south of proposed project driveway: LOS D northbound and LOS C southbound.
2) Friday PM Peak Hour

Acceptable operation northbound both north of Zinfandel Lane and south of the new project entrance, but unacceptable operation southbound: LOS D northbound and LOS E southbound.

## 3) Saturday PM Peak Hour

Acceptable operation north of Zinfandel Lane northbound, but unacceptable operation southbound: LOS D northbound and LOS E southbound. Unacceptable operation south of the new project entrance both northbound and southbound: LOS E.
b) SILVERADO TRAIL

1) Friday AM Peak Hour

Acceptable operation both north and south of Zinfandel Lane: LOS C northbound and LOS C southbound.
2) Friday PM Peak Hour

Acceptable operation northbound both north and south of Zinfandel Lane, but unacceptable operation southbound: LOS D northbound and LOS E southbound.
3) Saturday PM Peak Hour

Acceptable operation both north and south of Zinfandel Lane: LOS C northbound and LOS D southbound.
c) ZINFANDEL LANE

1) Friday AM Peak Hour

Acceptable operation both near SR 29 and Silverado Trail: LOS C eastbound and westbound.
2) Friday PM Peak Hour

Acceptable operation both near SR 29 and Silverado Trail: LOS C eastbound and westbound.

## 3) Saturday PM Peak Hour

Acceptable operation both near SR 29 and Silverado Trail: LOS C eastbound and westbound.

## 2. YEAR 2020 OPERATING CONDITIONS (WITHOUT PROJECT)

## A. HARVEST

## 1. INTERSECTION LEVEL OF SERVICE - Table 4

a) SR 29/ZINFANDEL LANE

1) Friday AM Peak Hour

Acceptable overall intersection operation: LOS A Unacceptable Zinfandel Lane stop sign controlled westbound approach: LOS F
2) Friday PM Peak Hour

Unacceptable overall intersection operation: LOS F
Unacceptable Zinfandel Lane stop sign controlled eastbound and westbound approaches: LOS F

## 3) Saturday PM Peak Hour

Unacceptable overall intersection operation: LOS F
Unacceptable Zinfandel Lane stop sign controlled eastbound and westbound approaches: LOS F
b) SILVERADO TRAIL/ZINFANDEL LANE

1) Friday AM Peak Hour

Acceptable overall intersection operation: LOS A
Acceptable Zinfandel Lane stop sign controlled eastbound approach: LOS E
2) Friday PM Peak Hour

Unacceptable overall intersection operation: LOS F
Unacceptable Zinfandel Lane stop sign controlled eastbound approach: LOS F
3) Saturday PM Peak Hour

Acceptable overall intersection operation: LOS D
Unacceptable Zinfandel Lane stop sign controlled eastbound approach: LOS F

## 2. ROADWAY SEGMENT LEVEL OF SERVICE - Table 5

a) $\quad$ SR 29

1) Friday AM Peak Hour

Acceptable operation north of Zinfandel Lane in both directions: LOS D northbound and southbound. Unacceptable operation northbound and acceptable operation southbound south of the proposed project entrance: LOS E northbound and LOS D southbound.

## 2) Friday PM Peak Hour

Acceptable operation north of Zinfandel Lane northbound and unacceptable southbound: LOS D northbound and LOS E southbound \& unacceptable operation in both directions south of the proposed project entrance: LOS E northbound and southbound.
3) Saturday PM Peak Hour

Unacceptable operation in both directions north of Zinfandel Lane and south of the proposed project driveway: LOS E northbound and LOS E southbound.
b) SILVERADO TRAIL

1) Friday AM Peak Hour

Acceptable operation both north and south of Zinfandel Lane: LOS D northbound and LOS C southbound.

## 2) Friday PM Peak Hour

Acceptable operation northbound both north and south of Zinfandel Lane, but unacceptable operation southbound: LOS D northbound and LOS E southbound.
3) Saturday PM Peak Hour

Acceptable operation both north and south of Zinfandel Lane: LOS D northbound and southbound north of Zinfandel Lane \& LOS C northbound and LOS D southbound south of Zinfandel Lane.
c) ZINFANDEL LANE

1) Friday AM Peak Hour

Acceptable operation both near SR 29 and Silverado Trail: LOS C eastbound and westbound.
2) Friday PM Peak Hour

Acceptable operation both near SR 29 and Silverado Trail: LOS C eastbound and westbound.
3) Saturday PM Peak Hour

Acceptable operation both near SR 29 and Silverado Trail: LOS C eastbound and westbound.

## 3. YEAR 2030 CUMULATIVE OPERATING CONDITIONS (WITHOUT PROJECT)

## b) SILVERADO TRAIL/ZINFANDEL LANE

1) Friday AM Peak Hour

Acceptable overall intersection operation: LOS C
Unacceptable Zinfandel Lane stop sign controlled eastbound approach: LOS F
2) Friday PM Peak Hour

Unacceptable overall intersection operation: LOS F
Unacceptable Zinfandel Lane stop sign controlled eastbound approach: LOS F
3) Saturday PM Peak Hour

Unacceptable overall intersection operation: LOS F
Unacceptable Zinfandel Lane stop sign controlled eastbound approach: LOS F

## 2. ROADWAY SEGMENT LEVEL OF SERVICE - Table 7

a) $\quad$ SR 29

1) Friday AM Peak Hour

Unacceptable operation northbound and acceptable operation southbound both north of Zinfandel Lane and south of the new project entrance: LOS E northbound and LOS D southbound.
2) Friday PM Peak Hour

Unacceptable operation in both directions both north of Zinfandel Lane and south of the new project entrance: LOS E northbound and LOS F southbound.

## 3) Saturday PM Peak Hour

Unacceptable operation in both directions both north of Zinfandel Lane and south of the new project entrance: LOS E northbound and LOS F southbound.
b) SILVERADO TRAIL

1) Friday AM Peak Hour

Acceptable operation both north and south of Zinfandel Lane: LOS D northbound and LOS C southbound.

## 2) Friday PM Peak Hour

Unacceptable operation in both directions north of Zinfandel Lane: LOS E northbound and southbound, and unacceptable operation southbound south of Zinfandel Lane: LOS D northbound and LOS F southbound.
3) Saturday PM Peak Hour

Acceptable operation in both directions north of Zinfandel Lane: LOS D northbound and southbound \& unacceptable operation southbound south of Zinfandel Lane: LOS D northbound and LOS E southbound.

## c) ZINFANDEL LANE

1) Friday AM Peak Hour

Acceptable operation both near SR 29 and Silverado Trail: LOS C eastbound and westbound.
2) Friday PM Peak Hour

Acceptable operation both near SR 29 and Silverado Trail: LOS C eastbound and westbound.

## 3) Saturday PM Peak Hour

Acceptable operation both near SR 29 and Silverado Trail: LOS C eastbound and westbound.

## IX. PROJECT IMPACT EVALUATION SIGNIFICANCE CRITERIA

## A. SIGNIFICANCE CRITERIA

The following criteria were developed for recent traffic impact analyses in the County. These same criteria have been utilized in this study to determine the significance of impacts due to the project. An impact is considered to be significant if any of the following conditions are met.

- If a roadway directional segment has "Without Project" LOS A, B, C or D operation and deteriorates to LOS E or F operation with the addition of project traffic (and increases volumes by 1 percent or more), the impact is significant and would require mitigation.
- If a roadway directional segment already has "Without Project" unacceptable LOS E or F operation, an increase in directional traffic of 1 percent or greater is considered significant and would require mitigation.
- If an unsignalized intersection has "Without Project" overall LOS A, B, C or D operation and deteriorates to LOS E or F operation with the addition of project traffic (and increases volumes by 1 percent or more) - or - has a stop sign controlled movement operating at LOS A, B, C, D or E and deteriorates to LOS F with the additional project traffic (and increases volumes passing through the intersection by 1 percent or more), the impact is considered significant and would require mitigation.
- If an unsignalized intersection already has "Without Project" overall LOS E or F operation - or - if a stop sign controlled movement or approach is already operating at LOS F, an increase in traffic passing through the intersection of 1 percent or more due to the project is considered to be significant and would require mitigation.
- If projected daily volumes on the project driveway in combination with volumes on the roadway providing access to the project driveway meet County warrant criteria for provision of a left turn lane on the approach to the project entrance.
- If sight lines at project access driveways do not meet Caltrans stopping sight distance criteria based upon prevailing vehicle speeds.

## X. PROJECT TRIP GENERATION \& DISTRIBUTION

## A. TRIP GENERATION

Provision of a new driveway connection to the project site on SR 29 would not result in any net new vehicles on the local roadway system; only a redistribution of some winery traffic away from the Zinfandel Lane driveway to the new SR 29 driveway.

The 64 employees now considered part of the project would, however, add traffic to the local roadway network, but only minor amounts during the Friday and Saturday peak traffic hours during harvest. The peak hours of ambient traffic on the local circulation system are as follows.

$$
\begin{array}{ccc}
\text { Friday AM Peak Hour } & \text { Friday PM Peak Hour } & \frac{\text { Saturday Afternoon Peak Hour }}{3: 00-9: 00} \quad 3: 15-4: 15
\end{array}
$$

The work schedules of the 64 employees are or will be designed to preclude, to the maximum extent possible, vehicle trips during the peak traffic hours.

## PROJECT EMPLOYEES AND WORK SCHEDULES DURING HARVEST FOR ANALYSIS PURPOSES

Source: Raymond-Ticen Ranch Winery applicant
Based upon review of existing traffic counts at the Raymond access along Zinfandel Lane, it was apparent that a few admin and marketing employees leave the Raymond site during the AM peak hour. In addition, a few production and/or admin employees enter the Raymond site during the Friday AM peak hour and leave the site during the Friday and Saturday PM peak hours at times other than according to current scheduling. Based upon these observations, it was projected that there would also be a minor amount of traffic from the 64 "Project" employees on the system during the on-street peak traffic hours, even if their scheduling would not indicate this occurrence. Conservative adjustments for this traffic were as follows.

PROJECT PEAK HOUR HARVEST TRIP GENERATION DURING AMBIENT ON-STREET PEAK TRAFFIC HOURS (64 NEW EMPLOYEES)

*** Early arrival
Source: Crane Transportation Group
It should also be noted that the new project access along SR 29 would potentially result in some additional visitor "without appointment" traffic turning to/from the site than is occurring today due to the higher volume levels passing the site on SR 29 than is currently the case on Zinfandel Lane. These additional visitors should be attracted from the vehicle flow already on SR 29 and would therefore not be newly added vehicles to the local circulation system, only to the Raymond-Ticen Ranch internal circulation system. An added 10 inbound and outbound visitor "without appointment" vehicles have also been projected at the new SR 29 driveway during both the Friday and Saturday PM peak traffic hours.

## B. TRIP DISTRIBUTION

There are two traffic distribution components due to the project.

- Redistribution of traffic from existing visitors and the 26 permit allowable employees due to the new entrance along SR 29.
- Distribution of traffic from the 64 employees now considered part of the project to the local roadway network via both the SR 29 and Zinfandel Lane entrances.

Figures 10 and 11 show the Friday AM \& PM peak hour and Saturday PM peak hour redistribution of existing Raymond Vineyards traffic (with 26 employees) due to the new entrance on SR 29 as well as the separate increment of traffic due to the 64 employees considered part of the project distributed to the two project entrances.

Overall, traffic from the 64 employees would be expected to distribute about 75 percent to/from the south on SR 29 and Silverado Trail, with the remaining 25 percent to/from the north. There would be about equal use of both driveways during the peak traffic hours by the net new employee traffic.

Redistribution of existing traffic due to the new entrance on SR 29 would result in increased traffic on SR 29 south of the new entrance and a corresponding decrease on Silverado Trail south of Zinfandel Lane and on Zinfandel Lane between the Raymond driveway and Silverado Trail. There would be a major decrease in site traffic on Zinfandel Lane between SR 29 and the Raymond entrance as well as on SR 29 between Zinfandel Lane and the new winery entrance, while there would be no measurable change in traffic on SR 29 or Silverado Trail north of Zinfandel Lane.

Resultant 2015 harvest "With Project" volumes are presented in Figure 12 for Friday AM \& PM peak hour conditions, and in Figure 13 for Saturday PM peak hour conditions. Resultant 2020 harvest "With Project" volumes are presented in Figure 14 for Friday AM \& PM peak hour conditions, and in Figure 15 for Saturday PM peak hour conditions, while resultant cumulative 2030 harvest "With Project" volumes are presented in Figure 16 for Friday AM \& PM peak hour conditions, and in Figure 17 for Saturday PM peak hour conditions.

## C. PLANNED ROADWAY IMPROVEMENTS

There are no capacity increasing roadway improvements planned by the County on the local roadway network serving the project site. ${ }^{3}$ However, the applicant is proposing construction of a left turn lane on the westbound Zinfandel Lane approach to the Raymond Vineyards driveway.

[^2]
## XI. PROJECT IMPACTS

## A. EXISTING (2015) WITH PROJECT CONDITIONS

## 1. HARVEST

## a) Summary

Project traffic would not result in any significant level of service impacts at the Zinfandel Lane intersections with SR 29 or Silverado Trail, or any significant level of service impacts along any analyzed SR 29, Silverado Trail or Zinfandel Lane roadway segments during any harvest Friday or Saturday peak traffic hours. Less than Significant.

## b) Intersection Level of Service (ZINFANDEL LANE/ SILVERADO TRAIL \& ZINFANDEL LANE/SR 29) - Table 2

At the SR 29/Zinfandel Lane intersection operation would remain unacceptable during the Friday AM \& PM and Saturday PM peak traffic hours with the change in traffic due to the project. However, the project would result in no net change in volume during the Friday AM peak hour, and reductions in traffic during both the Friday and Saturday PM peak hours (-. 55 percent during the Friday PM peak and -.48 percent during the Saturday PM peak). Less than Significant.

At the Silverado Trail/Zinfandel Lane intersection operation would remain acceptable during the Friday AM peak hour, and unacceptable during the Friday and Saturday PM peak traffic hours with the change in traffic due to the project. However, the project would result in no net change in volume during the Friday PM peak hour, and an increase of only .07 percent during the Saturday PM peak hour, which would be less than the minimum 1 percent traffic added significance criteria limit. Less than Significant.

## c) Roadway Segments (SR 29, SILVERADO TRAIL \& ZINFANDEL LANE) - Table 3

Zinfandel Lane would maintain acceptable LOS C operation during the Friday AM \& PM and Saturday PM peak traffic hours with the change in traffic due to the proposed project. Peak hour volumes would decline due to the project between SR 29 and the Raymond entrance, and remain about the same between the Raymond entrance and Silverado Trail. Less than Significant.

Silverado Trail would maintain acceptable operation during the Friday AM and Saturday PM peak hours with the change in traffic due to the proposed project. During the Friday PM peak hour when "Without Project" operation would be an unacceptable LOS E in the southbound direction, there will be no change in southbound volume due to the project north of Zinfandel Lane, and a 0.1 percent reduction in southbound traffic due to the project to the south of Zinfandel Lane. Less than Significant.

SR 29 would maintain acceptable operation during the Friday AM peak hour with the change in traffic due to the proposed project. During the Friday PM peak hour when "Without Project" operation would be an unacceptable LOS E in the southbound direction, the change in traffic due to the proposed project would result in a 0.1 percent increase to the north of Zinfandel Lane and a 0.6 percent increase to the south of the new project driveway, which would be less than the minimum 1 percent traffic added significance criteria limit. During the Saturday PM peak hour when "Without Project" operation would be an unacceptable LOS E in both directions south of the new project entrance, there would be no change in northbound traffic and a +.4 percent increase in southbound traffic, which would be less than the minimum 1 percent traffic added significance criteria limit. To the north of Zinfandel Lane, when "Without Project" operation would be an unacceptable LOS E in the southbound direction, the project would not result in any change in traffic. Less than Significant.

## B. YEAR 2020 "WITH PROJECT" CONDITIONS

## 1. HARVEST

## a) Summary

Project traffic would not result in any significant level of service impacts at the Zinfandel Lane intersections with SR 29 or Silverado Trail, or any significant level of service impacts along any analyzed SR 29, Silverado Trail or Zinfandel Lane roadway segments during any harvest Friday or Saturday peak traffic hours. Less than Significant.

## b) Intersection Level of Service (ZINFANDEL LANE/ SILVERADO TRAIL \& ZINFANDEL LANE/SR 29) - Table 4

At the SR 29/Zinfandel Lane intersection operation would remain unacceptable during the Friday AM \& PM and Saturday PM peak traffic hours with the change in traffic due to the project. However, the project would result in no net change in volume during the Friday AM peak hour, and reductions in traffic during both the Friday and Saturday PM peak hours (-. 55 percent during the Friday PM peak and -. 48 percent during the Saturday PM peak). Less than Significant.

At the Silverado Trail/Zinfandel Lane intersection operation would remain acceptable during the Friday AM peak hour, and unacceptable during the Friday and Saturday PM peak traffic hours with the change in traffic due to the proposed project. However, the project would result in no net change in volume during the Friday PM peak hour, and an increase of only .07 percent during the Saturday PM peak hour, which would be less than the minimum 1 percent traffic added significance criteria limit. Less than Significant.

## c) Roadway Segments (SR 29, SILVERADO TRAIL \& ZINFANDEL LANE) - Table 5

Zinfandel Lane would maintain acceptable LOS C operation during the Friday AM \& PM and Saturday PM peak traffic hours with the change in traffic due to the proposed project. Peak hour volumes would decline due to the project between SR 29 and the Raymond entrance, and remain about the same between the Raymond entrance and Silverado Trail. Less than Significant.

Silverado Trail would maintain acceptable operation during the Friday AM and Saturday PM peak hours with the change in traffic due to the proposed project. During the Friday PM peak hour when "Without Project" operation would be an unacceptable LOS E in the southbound direction, there would be no change in southbound volume due to the project north of Zinfandel Lane, and a 0.1 percent reduction in southbound traffic due to the project to the south of Zinfandel Lane. Less than Significant.

SR 29 would maintain acceptable operation during the Friday AM peak hour north of Zinfandel Lane with the change in traffic due to the proposed project, while south of the project entrance "Without Project" operation would be an unacceptable LOS E in the northbound direction, the change in traffic due to the proposed project would result in a 0.3 percent increase, which would be less than the minimum 1 percent traffic added significance criteria limit. During the Friday PM peak hour when "Without Project" operation would be an unacceptable LOS E in the southbound direction, the change in traffic due to the proposed project would result in a 0.1 percent increase to the north of Zinfandel Lane and a 0.6 percent increase to the south of the new project driveway, which would be less than the minimum 1 percent traffic added significance criteria limit. During the Saturday PM peak hour when "Without Project" operation will be an unacceptable LOS E in both directions south of the new project entrance, there would be no change in northbound traffic and a +0.3 percent increase in southbound traffic, which would be less than the minimum 1 percent traffic added significance criteria limit. To the north of Zinfandel Lane, when "Without Project" operation would be an unacceptable LOS E in both directions, the project would not result in any change in traffic. Less than Significant.

## C. YEAR 2030 CUMULATIVE "WITH PROJECT" CONDITIONS

## 1. HARVEST

## a) Summary

Project traffic would not result in any significant level of service impacts at the Zinfandel Lane intersections with SR 29 or Silverado Trail, or any level of service impacts along any analyzed SR 29, Silverado Trail or Zinfandel Lane roadway segments during any harvest Friday or Saturday peak traffic hour. Less than Significant.
b) Intersection Level of Service (ZINFANDEL LANE/ SILVERADO TRAIL \& ZINFANDEL LANE/SR 29) - Table 6

At the SR 29/Zinfandel Lane intersection operation would remain unacceptable during the Friday AM \& PM and Saturday PM peak traffic hours with the change in traffic due to the project. However, the project would result in no net change in volume during the Friday AM peak hour, and reductions in traffic during both the Friday and Saturday PM peak hours (-. 43 percent during the Friday PM peak and -.36 percent during the Saturday PM peak). Less than Significant.

At the Silverado Trail/Zinfandel Lane intersection operation would remain unacceptable during the Friday AM \& PM and Saturday PM peak traffic hours with the change in traffic due to the proposed project. However, the project would only result in an increase of 0.35 percent during the Friday AM peak hour, no net change in volume during the Friday PM peak hour, and an increase of only .06 percent during the Saturday PM peak hour, which would be less than the minimum 1 percent traffic added significance criteria limit. Less than Significant.

## c) Roadway Segments (SR 29, SILVERADO TRAIL \& ZINFANDEL LANE) - Table 7

Zinfandel Lane would maintain acceptable LOS C operation during the Friday AM \& PM and Saturday PM peak traffic hours with the change in traffic due to the proposed project. Peak hour volumes will decline due to the project between SR 29 and the Raymond entrance, and remain about the same between the Raymond entrance and Silverado Trail. Less than Significant.

Silverado Trail would maintain acceptable operation during the Friday AM peak hour with the change in traffic due to the proposed project. During the Friday PM peak hour when "Without Project" operation would be an unacceptable LOS E in the northbound direction, there would be no change in southbound volume due to the project north of Zinfandel Lane, and a 0.1 percent reduction in southbound traffic due to the project to the south of Zinfandel Lane. During the Saturday PM peak hour operation would remain acceptable north of Zinfandel Lane. South of Zinfandel Lane, when "Without Project" operation would be an unacceptable LOS E in the southbound direction, there would be no change in volume due to the project. Less than Significant.

SR 29 would maintain acceptable operation during the Friday AM peak hour with the change in traffic due to the proposed project. In the northbound direction when "Without Project" operation would be an unacceptable LOS E, the change in traffic due to the proposed project would result in a 0.1 percent increase north of Zinfandel Lane and a 0.3 percent increase south of the project entrance, which would be less than the minimum 1 percent traffic added significance criteria limit. During the Friday PM peak hour when "Without Project" operation would be an unacceptable LOS E in the northbound direction and LOS F in the southbound direction, the change in traffic due to the proposed project to the north of Zinfandel Lane would result in a 0.1 percent increase in both north and southbound traffic, while to the south of the project driveway the change in traffic due to the proposed project would result in a 0.2 percent increase northbound and a 0.5 percent increase southbound, which would be less than the minimum 1
percent traffic added significance criteria limit. During the Saturday PM peak hour when "Without Project" operation would be an unacceptable LOS E in the northbound direction and LOS F in the southbound direction south of the new project entrance, there would be no change in northbound traffic and $a+0.3$ percent increase in southbound traffic, which would be less than the minimum 1 percent traffic added significance criteria limit. To the north of Zinfandel Lane, when "Without Project" operation would be an unacceptable LOS E in the northbound direction and LOS F in the southbound direction, the project would not result in any change in traffic.

## Less than Significant.

## XII. PROJECT ACCESS IMPACTS

## A. SIGHT LINE ADEQUACY AT PROJECT DRIVEWAYS

## 1. Project Driveway Connection to Zinfandel Lane

Zinfandel Lane is level and straight at the project entrance. It has a posted speed limit of 45 miles per hour. Observed speeds on Zinfandel Lane at the project entrance ranged from 40 to 55 mph in both directions. Sight lines for drivers turning from the Zinfandel Lane driveway are greater than 1,000 feet to the east and west.

## 2. Project Driveway Connection to SR 29 (With Project)

SR 29 is level and straight at the project entrance. It has a posted speed limit of 50 miles per hour and observed speeds ranged from 40 to 60 mph in both directions. Sight lines for drivers turning from the new SR 29 intersection would be about 700 feet to the north (to see and be seen by southbound traffic) and more than 800 feet to the south (to see and be seen by northbound traffic).

## 3. Sight Line Criteria

Corner sight line criteria at a private driveway connection to a public road are based upon minimum stopping sight distance. Shown below are Caltrans minimum stopping sight distance Highway Design Manual criteria. ${ }^{4}$

| SPEED (MPH) | MINIMUM STOPPING <br> SIGHT DISTANCE |
| :---: | :---: |
| 40 | $30 \boldsymbol{\prime}^{\prime}$ |
| 45 | $360^{\prime}$ |
| 50 | $430^{\prime}$ |
| 55 | $500^{\prime}$ |
| 60 | $580^{\prime}$ |

Based upon available sight lines and observed vehicle speeds along Zinfandel Lane and SR 29 at the project entrances, sight lines are acceptable at both locations. Less than Significant.

[^3]
## B. ACCESS TO TICEN PROPERTY ALONG SR 29

The project access driveway along the east side of SR 29 will be located at the same location of the existing driveway now serving the Ticen Vineyards property. The driveway on the west side of SR 29 opposite the existing Ticen driveway will remain and will continue to provide access to a single family residence and for vineyard access. Existing peak period counts showed minimal traffic volumes associated with this west side driveway.

The continuous two-way left turn lane now being provided by Caltrans along SR 29 will serve the Raymond-Ticen Ranch Winery as well as the driveway on the west side of the state highway.

## XIII. LEFT TURN LANE WARRANT EVALUATION

The project will be providing a left turn lane on the westbound Zinfandel Lane approach to the existing Raymond driveway as part of the project. In addition, Caltrans is now widening SR 29 along the project frontage and providing a continuous two-way left turn lane at the project entrance. This median turn lane will allow safe deceleration and storage of southbound vehicles turning into the site as well as a median refuge area for drivers making left turns from the project driveway. Less than Significant.

## XIV. MARKETING EVENTS

No new marketing events are included in the proposed project. Less than Significant.

## XV. CONCLUSIONS \& RECOMMENDATIONS

The project will result in no significant off-site circulation system operational impacts to SR 29, Silverado Trail or Zinfandel Lane nor to the Zinfandel Lane intersections with SR 29 and Silverado Trail. Left turn lanes will be provided on the Zinfandel Lane and SR 29 approaches to both project driveways, and a refuge area will be provided in the SR 29 median to assist left turns from the new project driveway. In addition, sight lines at the project driveway connections to SR 29 and Zinfandel Lane are acceptable and meet Caltrans stopping sight distance criteria.

## RAYMOND-TICEN RANCH EIR ADDENDUM RESPONSES TO TRAFFIC COMMENTS FROM DANA AYERS, COUNTY OF NAPA PLANNING DEPT.

Comment 1: "The traffic study accounts for traffic from the "proposed" 64-employee increase but does not appear to include trips from the requested extension of visitor hours. Previouslyadopted conditions of approval for the winery require the tasting room to close at 4:00 p.m. in order to eliminate vehicle trips during the peak hour of the afternoon commute. However, the hours for the tasting room are currently proposed to be extended through 6:30 p.m. This extension of hours, if approved with this use permit request, would add visitor trips to the peak commute and the evening peak hour of traffic, but these trips appear to be missing from project description and the corresponding analysis of level of service with project."

Response 1: When it was determined from the August 2015 traffic counts that the peak traffic hours along SR 29, Zinfandel Lane and Silverado Trail were 3:00-4:00 PM on Friday and 3:154:15 on Saturday afternoon, the direction for the traffic study was that the visitor by appointment ending hour would stay 4:00 PM for analysis purposes. Based upon the project description that the visitation by appointment numbers during the day would stay the same with or without the project, a more conservative evaluation was conducted for the Friday and Saturday PM peak traffic hours with the assumption that visitation would end at 4:00 PM rather than extend to 6:30 PM. If visitation by appointment were extended to 6:30 PM for analysis purposes, there would be fewer visitors per hour during the actual PM peak traffic hours than with the assumption that all visitation stop at 4:00 PM.

Comment 2: "Traffic volumes in the text of the document appear to differ from those in the figures. For example, the count results written in section B. 2 on page 7 of the study do not match the sum of the traffic movements depicted in Figures 4 and 5 of the study. I realize that there might be some rounding off of numbers to the next highest five or ten, in order to be conservative, but some of the numbers seem to be either higher or lower by 20 or more vehicles in some instances."

Response 2: The peak hour volumes referenced in the text on page 7 reflect August 2015 conditions with 90 employees working at Raymond Vineyards and all employee traffic accessing Zinfandel Lane. However, the Friday AM \& PM peak hour and Saturday PM peak hour volumes referenced in Figures 4 and 5 reflect harvest 2015 conditions with a theoretical reduction from 90 down to 26 employees working at Raymond Vineyards, again with all employee traffic accessing Zinfandel Lane. Therefore, while there is projected to be a very minor increase in overall traffic from August to harvest (September), the reduction in employees produces an overall minor net reduction in volumes. Therefore, the theoretical volume projections presented in Figures 4 and 5 (reflecting 26 employees during 2015 harvest conditions) are slightly lower than those presented in the text (reflecting 90 employees during the August 2015 counts).

Comment 3: "Please clarify how the peak hour of traffic, as described in this traffic study, is different from the LMR traffic study (2014). The Raymond-Ticen study identifies the PM peak hours as 3:00-4:00 p.m. on Friday and 3:15-4:15 p.m. on Saturday. The LMR traffic study identifies the Friday peak hour one hour later on Friday (4:00-5:00 p.m.) and 15 minutes later on Saturday (3:30-4:30 p.m.). (I selected the LMR study because the winery is in the vicinity of Raymond, it is fairly recent, and it was also prepared by CTG.)"

Response 3: The SR 29 traffic counts for the LMR traffic study were conducted in early December 2013, whereas the counts for the Raymond-Ticen Ranch traffic study were conducted in August 2015. The peak Friday and Saturday traffic hours from the much newer counts, taken at almost the peak traffic time of the year, were considered the more appropriate to use for the Raymond-Ticen Ranch traffic study. Also, it is considered unlikely that Caltrans would have approved use of any information that was almost three years old.
