Initial Study/Negative Declaration (or Mitigated Negative Declaration or CEQA Memo)

COUNTY OF NAPA PLANNING, BUILDING AND ENVIRONMENTAL SERVICES DEPARTMENT 1195 THIRD ST., SUITE 210

NAPA, CA 94559 (707) 253-4416

Initial Study Checklist (form updated October 2016)

- 1. **Project Title:** Castlevale Winery (P09-00529-UP)
- 2. Property Owner/Applicant: Carolyn Martini and Barry Cox; PO Box 61, St. Helena CA 94574; (707) 965-2710
- 3. **Representative Name**: Donna B. Oldford; 2620 Pinot Way, St. Helena, CA 94574
- 4. County Contact Person: Graham Hannaford; (707) 299-1361; graham.hannaford@countyofnapa.org
- 5. Project Location and APN: 3450 Chiles Pope Valley Road, St. Helena; APN #025-230-016 and 025-230-014
- 6. **General Plan Description:** Agriculture, Watershed and Open Space (AWOS) Designation.
- 7. **Zoning:** Agricultural Watershed (AW).
- 8. Background/Project History:

The 55.35 acre parcel currently has 30 acres of vineyards planted on site and no other development. The project was submitted December 15, 2009, and was deemed incomplete January 7, 2010. The applicants' agent, indicated that the project was going to be withdrawn in October 2010. Three years of discussion of withdrawing or deeming the project abandoned ensued. In April 2014, a second submittal was received, which was deemed incomplete. A third submittal was received in October 2015, but was not distributed for comment until January 2016. Correspondence with the applicants' agent informing them of the comments received from other divisions was sent on January 15, 2016. A completeness letter was sent out regarding this application on March 14, 2016 indicating several items that still needed to be addressed.

A fourth submittal was received on April 28, 2017. The project was still deemed incomplete by Engineering on July 27, 2017. Tribal consultation was sent out September 25, 2017 and the representative from the Yocha Dehe tribe responded on October 13, 2017 that they would like to conduct a site visit and would require an archeological study. After attempting to reschedule a site visit in October and sending a copy of the provided archeological report submitted on February 13, 2018, several attempts at communication with Yoche Dehe were made with no response from the tribe.

An updated set of plans were submitted to Engineering on April 16, 2018, which were deemed complete on May 7, 2018.

- 9. **Description of Project:** Approval of a use permit to allow the construction of a new 30,000 gallon winery with the following characteristics:
 - a) The construction of a 21,795 square foot winery building, which includes 2,761 square feet of accessory use and 19,065 square feet of production area, and a 2,965 square foot cave, with the cave spoils to be disposed on site;
 - b) Tours and tastings by appointment only for a maximum of 18 persons per day, a maximum of 126 per week Monday through Sunday;
 - c) A marketing plan consisting of:
 - a. 12 Food and Wine Pairing events, with a maximum of 30 quests. The food will be catered in.
 - Three (3) Wine Club Open House events with a maximum of 75 guests. Portable facilities will be used for these events. Food to be catered if served.
 - Two (2) Wine Auction events, with a maximum of 125 guests. Portable facilities will be used for these events. All food to be catered.
 - d) Hours of operation: 10 a.m. 4 p.m. for visitation; 6 a.m. 6 p.m. for production, except during harvest when production may run 24 hours a day;
 - e) Four (4) full-time employees and two (2) part-time employees;
 - f) On-premises consumption of wines produced on site in the tasting room and outdoor hospitality area in accordance with Business and Professions Code Sections 23358, 23390 and 23396.5 (AB 2004-Evans Bill);
 - g) Construction of 8 parking spaces (7 standard spaces and one ADA space). Event overflow parking will take place in the vineyard avenues;
 - h) Installation of a wastewater system;
 - i) Installation of three (3) water storage tanks 100,000 gallons, 50,000 gallons, and 10,000 gallons in size;
 - i) Improvements to the existing driveway; and;

k) Replacement of the existing bridge.

10. Describe the environmental setting and surrounding land uses:

The 55.35 acre project site is located within the AW zoning district on the north side of Chiles Pope Valley Road approximately ¾ of a mile north of its intersection with Lower Chiles Valley Road. The site is mostly flat, with a knoll where the winery building is proposed, and the slope rising rapidly on the northeastern border of the parcel. The site primarily consists of Bressa-Dibble complex soils. The site is currently only developed with approximately 28 acres of vineyard, however the parcel to the northeast, which will contain a portion of the private driveway being used for access, is developed with a single family residence which is approximately 835 feet from the proposed building site for the winery, and several agricultural buildings. Chiles Creek marks the western and southwestern border of the parcel and the entirety of the parcel is in the Lake Hennessy water supply drainage.

There is vineyard development to the northwest and southeast of the parcel, and a rapid rise in elevation to the northeast. The parcel to the northeast has common ownership as the subject parcel and as mentioned above contains a single family residence and several agricultural buildings. The surrounding parcels are all larger than 150 acres. The project is outside of all 100 and 500 year flood zones. Native vegetation of the site includes grassland and riparian woodland; most of the site is disturbed and primarily planted with vineyards.

- Other agencies whose approval is required (e.g., permits, financing approval, or participation agreement).

 The project would also require various ministerial approvals by the County, including but not limited to building permits, grading permits, waste disposal permits, and an encroachment permit for any work performed within the County right of way. Permits may also be required by the Department of Alcoholic Beverage Control, and the Bureau of Alcohol, Tobacco, & Firearms.
- Tribal Cultural Resources. Have California Native American tribes traditionally and culturally affiliated with the project area requested consultation pursuant to Public Resources Code section 21080.3.1? If so, has consultation begun?

On September 25, 2017, County Staff sent invitations to consult on the proposed project to Native American tribes who had a cultural interest in the area and who as of that date had requested to be invited to consult on projects, in accordance with the requirements of Public Resources Code section 21080.3.1. On October 13, 2017, the Yoche Dehe tribe contacted the County to formally express an interest in the project. An archeological study was performed by a licensed archeologist. This report was sent to the tribe on February 13, 2018. After several attempts to contact the tribe regarding this project went unanswered, the 30 day consultation period was declared closed.

Note: Conducting consultation early in the CEQA process allows tribal governments, lead agencies, and project proponents to discuss the level of environmental review, identify and address potential adverse impacts to tribal cultural resources, and reduce the potential for delay and conflict in the environmental review process. (See Public Resources Code section 21083.3.2.) Information may also be available from the California Native American Heritage Commission's Sacred Lands File per Public Resources Code section 5097.96 and the California Historical Resources Information System administered by the California Office of Historic Preservation. Please also note that Public Resources Code Section 21082.3(c) contains provisions specific to confidentiality.

ENVIRONMENTAL IMPACTS AND BASIS OF CONCLUSIONS:

County of Napa Planning, Building and Environmental Services Department

On the basis of this initial evaluation:

The conclusions and recommendations contained herein are professional opinions derived in accordance with current standards of professional practice. They are based on a review of the Napa County Environmental Resource Maps, the other sources of information listed in the file, and the comments received, conversations with knowledgeable individuals; the preparer's personal knowledge of the area; and, where necessary, a visit to the site. For further information, see the environmental background information contained in the permanent file on this project.

	a)	Conflict with or obstruct implementation of the applicable air quality plan?			\boxtimes	
	b)	Violate any air quality standard or contribute substantially to an existing or projected air quality violation?			\boxtimes	
	c)	Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors)?			\boxtimes	

¹ "Forest land" is defined by the State as "land that can support 10-percent native tree cover of any species, including hardwoods, under natural conditions, and that allows for management of one or more forest resources, including timber, aesthetics, fish and wildlife, biodiversity, water quality, recreation, and other public benefits." (Public Resources Code Section 12220(g)) The Napa County General Plan anticipates and does not preclude conversion of some "forest land" to agricultural use, and the program-level EIR for the 2008 General Plan Update analyzed the impacts of up to 12,500 acres of vineyard development between 2005 and 2030, with the assumption that some of this development would occur on "forest land." In that analysis specifically, and in the County's view generally, the conversion of forest land to agricultural use would constitute a potentially significant impact only if there were resulting significant impacts to sensitive species, biodiversity, wildlife movement, sensitive biotic communities listed by the California Department of Fish and Wildlife, water quality, or other environmental resources addressed in this checklist.

		Potentially Significant Impact	Significant With Mitigation Incorporation	Less Than Significant Impact	No Impact

a-d. On June 2, 2010, the Bay Area Air Quality Management District's (BAAQMD) Board of Directors unanimously adopted thresholds of significance to assist in the review of projects under the California Environmental Quality Act. These Thresholds are designed to establish the level at which BAAQMD believed air pollution emissions would cause significant environmental impacts under CEQA and were posted on BAAQMD's website and included in BAAQMD's updated CEQA Guidelines (updated May 2012). The Thresholds are advisory and may be followed by local agencies at their own discretion.

The Thresholds were challenged in court. Following litigation in the trial court, the court of appeal, and the California Supreme Court, all of the Thresholds were upheld. However, in an opinion issued on December 17, 2015, the California Supreme Court held that CEQA does not generally require an analysis of the impacts of locating development in areas subject to environmental hazards unless the project would exacerbate existing environmental hazards. The Supreme Court also found that CEQA requires the analysis of exposing people to environmental hazards in specific circumstances, including the location of development near airports, schools near sources of toxic contamination, and certain exemptions for infill and workforce housing. The Supreme Court also held that public agencies remain free to conduct this analysis regardless of whether it is required by CEQA.

In view of the Supreme Court's opinion, local agencies may rely on Thresholds designed to reflect the impact of locating development near areas of toxic air contamination where such an analysis is required by CEQA or where the agency has determined that such an analysis would assist in making a decision about the project. However, the Thresholds are not mandatory and agencies should apply them only after determining that they reflect an appropriate measure of a project's impacts. These Guidelines may inform environmental review for development projects in the Bay Area, but do not commit local governments or BAAQMD to any specific course of regulatory action.

BAAQMD published a new version of the Guidelines dated May 2017, which includes revisions made to address the Supreme Court's opinion. The May 2017 Guidelines update does not address outdated references, links, analytical methodologies or other technical information that may be in the Guidelines or Thresholds Justification Report. The Air District is currently working to revise any outdated information in the Guidelines as part of its update to the CEQA Guidelines and thresholds of significance.

The mountains bordering Napa Valley block much of the prevailing northwesterly winds throughout the year. Sunshine is plentiful in Napa County, and summertime can be very warm in the valley, particularly in the northern end. Winters are usually mild, with cool temperatures overnight and mild-to-moderate temperatures during the day. Wintertime temperatures tend to be slightly cooler in the northern end of the valley. Winds are generally calm throughout the county. Annual precipitation averages range from about 24 inches in low elevations to more than 40 inches in the mountains.

Ozone and fine particle pollution, or PM2.5, are the major regional air pollutants of concern in the San Francisco Bay Area. Ozone is primarily a problem in the summer, and fine particle pollution in the winter. In Napa County, ozone rarely exceeds health standards, but PM2.5 occasionally does reach unhealthy concentrations. There are multiple reasons for PM2.5 exceedances in Napa County. First, much of the county is wind-sheltered, which tends to trap PM2.5 within the Napa Valley. Second, much of the area is well north of the moderating temperatures of San Pablo Bay and, as a result, Napa County experiences some of the coldest nights in the Bay Area. This leads to greater fireplace use and, in turn, higher PM2.5 levels. Finally, in the winter easterly winds often move fine-particle-laden air from the Central Valley to the Carquinez Strait and then into western Solano and southern Napa County (BAAQMD, *In Your Community: Napa County*, April 2016).

The impacts associated with implementation of the project were evaluated consistent with guidance provided by BAAQMD. Ambient air quality standards have been established by state and federal environmental agencies for specific air pollutants most pervasive in urban environments. These pollutants are referred to as criteria air pollutants because the standards established for them were developed to meet specific health and welfare criteria set forth in the enabling legislation. The criteria air pollutants emitted by development, traffic and other activities anticipated under the proposed development include ozone, ozone precursors oxides of nitrogen and reactive organic gases (NOx and ROG), carbon monoxide (CO), nitrogen dioxide (NO2), and suspended particulate matter (PM10 and PM2.5). Other criteria pollutants, such as lead and sulfur dioxide (SO2), would not be substantially emitted by the proposed development or traffic, and air quality standards for them are being met throughout the Bay Area.

BAAQMD has not officially recommended the use of its thresholds in CEQA analyses and CEQA ultimately allows lead agencies the discretion to determine whether a particular environmental impact would be considered significant, as evidenced by scientific or other factual data. BAAQMD also states that lead agencies need to determine appropriate air quality thresholds to use for each project they

review based on substantial evidence that they include in the administrative record of the CEQA document. One resource BAAQMD provides as a reference for determining appropriate thresholds is the *California Environmental Quality Act Air Quality Guidelines* developed by its staff in 2010 and as updated through May 2017. These guidelines outline substantial evidence supporting a variety of thresholds of significance.

As mentioned above, in 2010, the BAAQMD adopted and later incorporated into its 2011 CEQA Guidelines project screening criteria (Table 3-1 – Operational-Related Criteria Air Pollutant and Precursors Screening Level Sizes) and thresholds of significance for air pollutants, which have now been updated by BAAQMD through May 2017. Because no additional square feet of floor area is proposed when compared to the BAAQMD's operational criteria pollutant screening size of 541,000 square feet for general light industrial, and compared to the BAAQMD's screening criterion of 47,000 square feet for a high quality restaurant, the project would not significantly impact air quality and does not require further study (BAAQMD CEQA Guidelines, May 2017 Pages 3-2 & 3-3.). Given the size of the entire project, which is approximately 24,760 square feet of proposed enclosed floor area (winery building and cave) including the proposed use of approximately 2,761 square feet of floor area for tasting/hospitality uses compared to the BAAQMD's screening criterion of 47ksf (high quality restaurant) and 541ksf (general light industry) for NO_X (oxides of nitrogen), the project would contribute an insignificant amount of air pollution and would not result in a conflict or obstruction of an air quality plan. (Please note: a high quality restaurant is considered comparable to a winery tasting room for purposes of evaluating air pollutant emissions, but grossly overstates emissions associated with other portions of a winery, such as office, barrel storage and production, which generate fewer vehicle trips. Therefore, a general light industry comparison has also been used for other such uses.)

The project falls well below the screening criteria as noted above, and consequently will not significantly affect air quality individually or contribute considerably to any cumulative air quality impacts.

In the short term, potential air quality impacts are most likely to result from earthmoving and construction activities required for project construction related to the new winery building, cave, parking area, and improvements to the existing driveway. Earthmoving and construction emissions would have a temporary effect; consisting mainly of dust generated during grading and other construction activities, exhaust emissions from construction related equipment and vehicles, and relatively minor emissions from paints and other architectural coatings. The Air District recommends incorporating feasible control measures as a means of addressing construction impacts. If the proposed project adhere to these relevant best management practices identified by the Air District and the County's standard conditions of project approval, construction-related impacts are considered less than significant:

7.1 SITE IMPROVEMENTS

c. AIR QUALITY

During all construction activities the permittee shall comply with the most current version of BAAQMD Basic Construction Best Management Practices including but not limited to the following, as applicable:

- 1. Post a publicly visible sign with the telephone number and person to contact at the lead agency regarding dust complaints. The BAAQMD's phone number shall also be visible.
- 2. Water all exposed surfaces (e.g., parking areas, staging areas, soil piles, grading areas, and unpaved access roads) two times per day.
- 3. Cover all haul trucks transporting soil, sand, or other loose material off-site.
- 4. Remove all visible mud or dirt traced onto adjacent public roads by using wet power vacuum street sweepers at least once per day. The use of dry power sweeping is prohibited.
- 5. All vehicle speeds on unpaved roads shall be limited to 15 mph.
- 6. All roadways, driveways, and sidewalks to be paved shall be completed as soon as possible. Building pads shall be laid as soon as possible after grading unless seeding or soil binders are used.
- 7. Idling times shall be minimized either by shutting off equipment when not in use or reducing the maximum idling time to five (5) minutes (as required by State Regulations). Clear signage shall be provided for construction workers at all access points.
- 8. All construction equipment shall be maintained and properly tuned in accordance with manufacturer's specifications. All equipment shall be checked by a certified visible emissions evaluator. Any portable engines greater than 50 horsepower or associated equipment operated within the BAAQMD's jurisdiction shall have either a California Air Resources Board (ARB) registration Portable Equipment Registration Program (PERP) or a BAAQMD permit. For general information regarding the certified visible emissions evaluator or the registration program, visit the ARB FAQ http://www.arb.ca.gov/portable/po

Furthermore, while earthmoving and construction on the site would generate dust particulates in the short-term, the impact would be less than significant with dust control measures as specified in Napa County's standard condition of approval relating to dust:

7.1 SITE IMPROVEMENTS

b. DUST CONTROL

Water and/or dust palliatives shall be applied in sufficient quantities during grading and other ground disturbing activities on-site to minimize the amount of dust produced. Outdoor construction activities shall not occur when average wind speeds exceed 20 mph.

e. While the Air District defines public exposure to offensive odors as a potentially significant impact, wineries are not known operational producers of pollutants capable of causing substantial negative impacts to sensitive receptors. The closest residence is approximately 835 feet to the northeast of the proposed winery building. Construction-phase pollutants would be reduced to a less than significant level by the above-noted standard condition of approval. The project would not create pollutant concentrations or objectionable odors affecting a substantial number of people. Impacts would be less than significant.

Mitigation Measures: None required.

IV.	BIOI	LOGICAL RESOURCES. Would the project:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporation	Less Than Significant Impact	No Impact
	a)	Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?			\boxtimes	
	b)	Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or US Fish and Wildlife Service?			\boxtimes	
	c)	Have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, Coastal, etc.) through direct removal, filling, hydrological interruption, or other means?				\boxtimes
	d)	Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?			\boxtimes	
	e)	Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?			\boxtimes	
	f)	Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?				\boxtimes

Discussion:

- a. According to the California Natural Diversity Database (CNDDB), the southern-most tip of the parcel has the potential to have Sharsmith's western flax, a candidate species, present. The only proposed work in this area is the replacement of the existing bridge and a slight widening of the existing road. This work will all take place within previously disturbed areas. Additionally, the area surrounding the existing road has been converted to vineyard. There is no potential significant impact to the species expected to result from this project.
- b. The replacement bridge proposed is a "rail car" type bridge, which would have its supports drilled into the ground beyond the top of the bank on either side of Chiles Creek. During the replacement, there is a potential for some incidental damage to riparian plants. Napa County's Conservation Regulations, Chapter 18.108 of the Napa County Code, dictate what work can be performed in the dedicated stream setbacks. Section 18.108.025(E)(12) allows for the installation of stream crossings, in accordance with appropriate permits from other state, federal, and local use permit requirements. This project falls under that description, and therefore requires no further mitigation, as the project has been designed to be as environmentally sensitive as possible by proposing a bridge design that will not disturb any portion of the streambed of Chiles Creek and having all work take place within previously disturbed areas
- c. There are no protected wetlands on this parcel, and therefore the project has no potential to cause any impact.
- d. The site contains no known areas where migratory fish occur. The work proposed for the replacement of the bridge will take place outside of the blue line stream Chiles Creek, and no impact will occur on any fish. The construction of the winery at the proposed location would not prevent the migration of any naturally occurring wildlife species. A less than significant impact is expected, as there is substantial amounts of undeveloped land that would remain.
- e. In addition to the stream setback exemption mention in IV b above, the project is proposed in a way that minimizes tree removal. Napa County does not currently have any tree protection ordinances, and the proposed location of the winery building will likely result in the

removal of less than five (5) total oak trees, measuring between 16" and 24" measured at breast height. There is approximately ± 5 acres of oak woodland and ± 7.5 acres of riparian woodland on the parcel. The parcel immediately to the north is 136.22 acres, the majority of which is oak woodland. Because of the small number of trees proposed to be removed and the larger oak woodland to the north that would be unaffected by this project, this project is not expected to create a significant impact.

f. There are no adopted conservation plans on the parcel.

Mitigation Measures: None required.

			Potentially Significant Impact	Less Than Significant With Mitigation Incorporation	Less Than Significant Impact	No Impact
V.	CU	LTURAL RESOURCES. Would the project:		-	·	
	a)	Cause a substantial adverse change in the significance of a historical resource as defined in CEQA Guidelines §15064.5?			\boxtimes	
	b)	Cause a substantial adverse change in the significance of an archaeological resource pursuant to CEQA Guidelines§15064.5?			\boxtimes	
	c)	Directly or indirectly destroy a unique paleontological resource or site or unique geological feature?			\boxtimes	
	d)	Disturb any human remains, including those interred outside of dedicated cemeteries?			\boxtimes	
Discuss	ion:					
a-d.	par par de\	December 2017, Eileen Barrow and Juliana Bartel of Tom Origer & Associcel. Previous studies in the surrounding areas indicated that there may local. An on-site field survey was conducted and prehistoric lithic scatter wavelopment associated with this application is proposed. No known human litural resources are expected to occur with this project, but the standard of	pe some findings of as discovered. This n remains are prese	archeological sign discovery occurre ent on this site No	nificance on th d away from wo significant in	ne subject where any opacts on

event of the discovery of archeological remains will be included with the conditions of approval as follows:

7.2.1 ARCHEOLOGICAL FINDING

In the event that archeological artifacts or human remains are discovered during construction, work shall cease in a 50-foot radius surrounding the area of discovery. The permittee shall contact the PBES Department for further guidance, which will likely include the requirement for the permittee to hire a qualified professional to analyze the artifacts encountered and to determine if additional measures are required.

If human remains are encountered during project development, all work in the vicinity must be halted, and the Napa County Coroner informed, so that the Coroner can determine if an investigation of the cause of death is required, and if the remains are of Native American origin. If the remains are of Native American origin, the permittee shall comply with the requirements of Public Resources Code Section 5097.98.

Mitigation Measures: None required.

			Potentially Significant Impact	Less Than Significant With Mitigation Incorporation	Less Than Significant Impact	No Impact
VI.	GE	OLOGY AND SOILS. Would the project:				
	a)	Expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving:				
		i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.				\boxtimes

		Potentially Significant Impact	Less Than Significant With Mitigation Incorporation	Less Than Significant Impact	No Impact
	ii) Strong seismic ground shaking?	Ш		\boxtimes	Ш
	iii) Seismic-related ground failure, including liquefaction?			\boxtimes	
	iv) Landslides?			\boxtimes	
b)	Result in substantial soil erosion or the loss of topsoil?			\boxtimes	
c)	Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?				
d)	Be located on expansive soil creating substantial risks to life or property? Expansive soil is defined as soil having an expansive index greater than 20, as determined in accordance with ASTM (American Society of Testing and Materials) D 4829.				
e)	Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?				

a.

- i.) There are no known faults on the project site as shown on the most recent Alquist-Priolo Earthquake Fault Zoning Map, nor is the parcel within any "Active Fault Zone Boundary". No impact is expected.
- ii.) All areas of the Bay Area are subject to strong seismic ground shaking. Construction of the project will be required to comply with all the latest building standards and codes, including the California Building Code that would reduce any potential impacts to a less than significant level.
- No subsurface conditions have been identified on the project site that indicated a susceptibility to seismic-related ground failure or liquefaction. According to the Napa County Environmental Resource Maps (based on the following layer Liquefaction) the property is in an area generally subject to a "very low" to "low" tendency to liquefy. All proposed new construction will be required to comply with all the latest building standards and codes at the time of construction. Compliance with the latest editions of the California Building Code for seismic stability would reduce any potential impacts to the maximum extent possible, resulting in result in less than significant impacts.
- iv.) According to the Napa County Environmental Resource Maps (based on the following layer Landslides line, polygon, and geology layers) there are no landslide deposits on the property.
- b. The proposed winery building is to be built into the side of a knoll on the property with a slope of approximately 15%. This is well below the 30% threshold established to minimize erosion potential in County Code Section 18.108.060. The project would require incorporation of best management practices and would be subject to the Napa County Stormwater Control, which addresses sediment and erosion control measures, and dust control The excavated earth from this project is proposed to be used on site as fill, and the submitted stormwater control plan has been declared acceptable by the Engineering Division and is not expected to wash significant amounts of topsoil away. Impacts on erosion and topsoils would be less than significant.
- c/d. According to the Napa County Environmental Resourve Maps (based on the following layer- Surficial Deposits, Geology) the property is underlain with Late Pleistocene fan deposits on the flat portion of the parcel that makes up the majority of the area and Pre-Quaternary deposits and bedrock on the hillside that begins at the far northern side of the parcel. As mentioned above, the liquefaction tendency runs from "very low" to "low".

The property consists entirely of Bressa-Dibble complex soil, 15 to 30 percent slopes on the southeastern portion of the parcel and 30 to 50 percent slopes in the norther most section of the parcel.

All proposed construction will be required to comply with all the latest building standards and codes at the time of construction. Compliance with the latest editions of the California Building Code for seismic stability would reduce any potential impacts to the maximum extent possible, resulting in less than significant impacts.

e. The applicant provided a wastewater disposal feasibility performed by Bartelt Engineering in October 2013. The estimated peak winery sanitary wastewater flow is 240 gallons per day (gpd). Attached to this wastewater disposal feasibility report was a Site Evaluation (permit

E08-00700), which provided the results of 15 test pits, each of which were deemed to be viable areas for wasterwater disposal. The Division of Environmental Health has reviewed this report and concurred with its findings. Impacts would be less than significant.

Mitigation Measures: None required.

VII.	GREENHOUSE GAS EMISSIONS. Would the project:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporation	Less Than Significant Impact	No Impact
a)	Generate a net increase in greenhouse gas emissions in excess of applicable thresholds adopted by the Bay Area Air Quality Management District or the California Air Resources Board which may have a significant impact on the environment?			\boxtimes	
b)	Conflict with a county-adopted climate action plan or another applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?			\boxtimes	

Discussion:

Napa County has been working to develop a Climate Action Plan (CAP) for several years. In 2012, a Draft CAP (March 2012) was recommended using the emissions checklist in the Draft CAP, on a trial basis, to determine potential greenhouse gas (GHG) emissions associated with project development and operation. At the December 11, 2012, Napa County Board of Supervisors (BOS) hearing, the BOS considered adoption of the proposed CAP. In addition to reducing Napa County's GHG emissions, the proposed plan was intended to address compliance with CEQA for projects reviewed by the County and to lay the foundation for development of a local offset program. While the BOS acknowledged the plan's objectives, the BOS requested that the CAP be revised to better address transportation-related greenhouse gas, to acknowledge and credit past accomplishments and voluntary efforts, and to allow more time for establishment of a cost-effective local offset program. The Board also requested that best management practices be applied and considered when reviewing projects until a revised CAP is adopted to ensure that projects address the County's policy goal related to reducing GHG emissions.

In July 2015, the County re-commenced preparation of the CAP to: i) account for present day conditions and modeling assumptions (such as but not limited to methods, emission factors, and data sources), ii) address the concerns with the previous CAP effort as outlined above, iii) meet applicable State requirements, and iv) result in a functional and legally defensible CAP. On April 13, 2016 the County, as the part of the first phase of development and preparation of the CAP, released Final Technical Memorandum #1: 2014 Greenhouse Gas Emissions Inventory and Forecast, April 13, 2016. This initial phase included: i) updating the unincorporated County's community-wide GHG emissions inventory to 2014, and ii) preparing new GHG emissions forecasts for the 2020, 2030, and 2050 horizons. Additional information on the County CAP can be obtained at the Napa County Department of Planning, Building and Environmental Services or http://www.countyofnapa.org/CAP/.

a/b. Overall increases in Greenhouse Gas (GHG) emissions in Napa County were assessed in the Environmental Impact Report (EIR) prepared for the Napa County General Plan Update and certified in June 2008. GHG emissions were found to be significant and unavoidable in that document, despite the adoption of mitigation measures incorporating specific policies and action items into the General Plan.

Consistent with these General Plan action items, Napa County participated in the development of a community-wide GHG emissions inventory and "emission reduction framework" for all local jurisdictions in the County in 2008-2009. This planning effort was completed by the Napa County Transportation and Planning Agency in December 2009, and served as the basis for development of a refined inventory and emission reduction plan for unincorporated Napa County.

In 2011, the Bay Area Air Quality Management District (BAAQMD) released California Environmental Quality Act (CEQA) Project Screening Criteria and Significance of Thresholds [1,100 metric tons per year (MT) of carbon dioxide and carbon dioxide equivalents (CO2e)]. This threshold of significance is appropriate for evaluating projects in Napa County.

During our ongoing planning effort, the County requires project applicants to consider methods to reduce GHG emissions consistent with Napa County General Plan Policy CON-65(e). (Note: Pursuant to State CEQA Guidelines Section 15183, because this initial study assesses a project that is consistent with an adopted General Plan for which an environmental impact report (EIR) was prepared, it appropriately focuses on impacts which are "peculiar to the project," rather than the cumulative impacts previously assessed.)

For the purposes of this analysis potential GHG emissions associated with winery 'construction' and 'development' and with 'ongoing' winery operations have been discussed.

GHGs are the atmospheric gases whose absorption of solar radiation is responsible for the greenhouse effect, including carbon dioxide, methane, ozone, and the fluorocarbons, that contribute to climate change (a widely accepted theory/science explain human effects on the atmosphere). Carbon Dioxide (CO2) gas, the principal greenhouse gas (GHG) being emitted by human activities, and whose concentration in the atmosphere is most affected by human activity, also serves as the reference gas to compare other greenhouse gases. Agricultural sources of carbon emissions include forest clearing, land-use changes, biomass burning, and farm equipment and management activity emissions (http://www.climatechange.ca.gov/glossary/letter_c.html). Equivalent Carbon Dioxide (CO2e) is the most commonly reported type of GHG emission and a way to get one number that approximates total emissions from all the different gasses that contribute to GHG (BAAMD CEQA Air Quality Guidelines, May 2017). In this case, carbon dioxide (CO2) is used as the reference atom/compound to obtain atmospheric carbon CO2 effects of GHG. Carbon stocks are converted to carbon dioxide equivalents (CO2e) by multiplying the carbon total by 44/12 (or 3.67), which is the ratio of the atomic mass of a carbon dioxide molecule to the atomic mass of a carbon atom (http://www.nciasi2.org/COLE/index.html).

One time "Construction Emissions" associated with a winery development project include: i) the carbon stocks that are lost (or released) when existing vegetation is removed and soil is ripped in preparation for a new winery structure and associated infrastructure; and ii) emissions associated with the energy used to develop and prepare the project area and construct a winery, including construction equipment and worker vehicle trips (hereinafter referred to as Equipment Emissions). These emissions also include underground carbon stocks (or Soil carbon) associated with any existing vegetation that is proposed to be removed. As previously stated, this project includes the construction of a new winery facility and improvements to an existing private driveway.

In addition to the one time Construction Emissions, "Operational Emissions" of the winery are also considered and include: i) any reduction in the amount of carbon sequestered by existing vegetation that is removed as part of the project compared to a "no project" scenario (hereinafter referred to as Operational Sequestration Emissions); and ii) ongoing emissions from the energy used to maintain and operate the winery, including vehicle trips associated with employee and visitor trips (hereinafter referred to as Operational Emissions). See Section XVI, Transportation/Traffic, for anticipated number of operational trips. Operational Emissions from the proposed winery would be the primary source of emissions over the long-term when compared to one time construction emissions.

As discussed in the Air Quality section of this Initial Study, in 2010, the BAAQMD adopted and later incorporated into its 2011 CEQA Guidelines project screening criteria (Table 3-1 – Criteria Air Pollutants and Precursors & GHG Screening Level Sizes) and thresholds of significance for air pollutants, including GHG emissions, which have now been updated by BAAQMD through May 2017. Because approximately 21,795 square feet of floor area for winery production and tasting/hospitality uses is proposed when compared to the BAAQMD's GHG screening criteria of 121,000 sf for general industrial, and compared to the BAAQMD's screening criterion of 9,000 sf. for high quality restaurant, the project was determined not to exceed the 1,100 MT of CO2e/yr GHG threshold of significance.

Furthermore, the applicant proposes to implement the following GHG reduction methods at the winery: installation of a photovoltaic energy system; compost at least 75% of all food and garden material; installation of water efficient fixtures; application of low impact development; installation of water efficient landscape in compliance with the Water Efficient Landscape Ordinance (WELO); installation of energy conserving lighting; the installation of bicycle racks; and to retain biomass removed via pruning and thinning by chipping the material and reusing it rather than burning on-site.

The proposed project has been evaluated against the BAAQMD thresholds and determined that the project would not exceed the 1,100 MT/yr of CO2e. GHG Emission reductions from local programs and project level actions, such as application of the Cal Green Building Code, tightened vehicle fuel efficiency standards, and more project-specific on-site programs including those winery features noted above would combine to further reduce emissions below BAAQMD thresholds.

Greenhouse Gas Emission reductions from local programs and project level actions, such as application of the Cal Green Building Code, vehicle fuel efficiency standards, and the project-specific on-site programs identified above would combine to further reduce emissions below BAAQMD thresholds.

As indicated above, the County is currently preparing a CAP and as the part of the first phase of development and preparation of the CAP has released Final Technical Memorandum #1 (2014 Greenhouse Gas Emissions Inventory and Forecast, April 13, 2016). Table 1 of the Technical Memorandum indicates that 2% of the County's GHG emissions in 2014 were a result of land use change.

The increase in emissions expected as a result of the project would be relatively modest and the project is in compliance with the County's efforts to reduce emissions as described above. For these reasons, project impacts related to GHG emissions are considered less than significant.

Mitigation Measures: None required.

Vall		TARRES AND HAZARROUG MATERIALS IV. 1111	Potentially Significant Impact	Less Than Significant With Mitigation Incorporation	Less Than Significant Impact	No Impact
VIII.	HA	ZARDS AND HAZARDOUS MATERIALS. Would the project:				
	a)	Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?			\boxtimes	
	b)	Create a significant hazard to the public or the environment through reasonable foreseeable upset and accident conditions involving the release of hazardous materials into the environment?			\boxtimes	
	c)	Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?				\boxtimes
	d)	Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?				\boxtimes
	e)	For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard for people residing or working in the project area?				
	f)	For a project within the vicinity of a private airstrip, or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard for people residing or working in the project area?				
	g)	Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?				\boxtimes
	h)	Expose people or structures to a significant risk of loss, injury or death involving wild-land fires, including where wild-lands are adjacent to urbanized areas or where residences are intermixed with wild-lands?			\boxtimes	

- a. The proposed project would not involve the transport of hazardous materials other than those small amounts utilized in typical winery operations. A business plan would be filed with the Environmental Health Division should hazardous materials reach reportable levels. Impacts would be less than significant.
- b. Hazardous materials such as diesel, maintenance fluids, and paints would be used onsite during construction. Should they be stored onsite, these materials would be stored in secure locations to reduce the potential for upset or accident conditions. The proposed project consists of a winery that would not be expected to use any substantial quantities of hazardous materials. Therefore, it would not be reasonably foreseeable for the proposed project to create upset or accident conditions that involve the release of hazardous materials into the environments. Impacts would be less than significant.
- c. There are no schools located within one-quarter mile from the existing winery building. According to Google Earth, the nearest school to the project site is Pacific Union College, located approximately 5.6 miles to the northwest. No impacts would occur.
- d. Based on a search of the California Department of Toxic Substances Control database, the project site does not contain any known EPA National Priority List sites, State response sites, voluntary cleanup sites, or any school cleanup sites. No impact would occur as the project site is not on any known list of hazardous materials sites.
- e. No impact would occur as the project site is not located within an airport land use plan.
- f. The project site is not located within the vicinity of any private airports. No impacts would occur.

- g. The proposed project's improvements to the existing driveway would meet Napa County Road and Street Standards. Therefore, the project would not obstruct emergency vehicle access. The project has been reviewed by the County Fire Department and Engineering Services Division and found acceptable, as conditioned.
- h. The project would not increase exposure of people and/or structures to a significant loss, injury or death involving wild land fires. The proposed improvements on the existing driveway would bring the driveway up to the current County Roads and Streets Standards and provide adequate access to Chiles Pope Valley Road. The project would comply with current California Department of Forestry and California Building Code requirements for fire safety. Impacts would be less than significant.

Mitigation Measures: None required.

			Potentially Significant Impact	Less Than Significant With Mitigation Incorporation	Less Than Significant Impact	No Impact
IX.	HY	DROLOGY AND WATER QUALITY. Would the project:				
	a)	Violate any water quality standards or waste discharge requirements?			\boxtimes	
	b)	Substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g., the production rate of pre-existing nearby wells would drop to a level which would not support existing land uses or planned uses for which permits have been granted)?			\boxtimes	
	c)	Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, in a manner which would result in substantial erosion or siltation on- or off-site?			\boxtimes	
	d)	Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site?			\boxtimes	
	e)	Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?				
	f)	Otherwise substantially degrade water quality?			\boxtimes	
	g)	Place housing within a 100-year flood hazard area as mapped on a federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map?				\boxtimes
	h)	Place within a 100-year flood hazard area structures which would impede or redirect flood flows?				\boxtimes
	i)	Expose people or structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam?				
	j)	Inundation by seiche, tsunami, or mudflow?				

Discussion:

On January 14, 2014, Governor Jerry Brown declared a drought emergency in the state of California. That declaration was followed up on April 1, 2015, when the Governor directed the State Water Resources Control Board to implement mandatory water reductions in cities and town across California to reduce water usage by 25 percent. These water restrictions do not apply to agricultural users. However, on April 7, 2017, Governor Jerry Brown signed an executive order lifting California's drought emergency in all but four counties (Fresno, Kings, Tulare and Tuolumne). The County of Napa had not adopted or implemented any additional mandatory water use restrictions. The County requires all Use Permit applicants to

complete necessary water analyses in order to document that sufficient water supplies are available for the proposed project and to implement water saving measures to prepare for periods of limited water supply and to conserve limited groundwater resources.

In general, recent studies have found that groundwater levels in the Napa Valley Floor exhibit stable long-term trends with a shallow depth to water. Historical trends in the Milliken-Sarco-Tulucay (MST) area, however, have shown increasing depths to groundwater, but recent stabilization in many locations. Groundwater availability, recharge, storage and yield are not consistent across the County. More is known about the resource where historical data have been collected. Less is known in areas with limited data or unknown geology. In order to fill existing data gaps and to provide a better understand of groundwater resources in the County, the Napa County Groundwater Monitoring Plan recommended 18 Areas of Interest (AOIs) for additional groundwater level and water quality monitoring. Through the well owner and public outreach efforts of the (GRAC) approximately 40 new wells have been added to the monitoring program within these areas. Groundwater Sustainability Objectives were developed and recommended by the GRAC and adopted by the Board. The recommendations included the goal of developing sustainability objectives, provided a definition, explained the shared responsibility for Groundwater Sustainability and the important role monitoring as a means to achieving groundwater sustainability.

In 2009 Napa County began a comprehensive study of its groundwater resources to meet identified action items in the County's 2008 General Plan update. The study, by Luhdorff and Scalmanini Consulting Engineers (LSCE), emphasized developing a sound understanding of groundwater conditions and implementing an expanded groundwater monitoring and data management program as a foundation for integrated water resources planning and dissemination of water resources information. The 2011 baseline study by LSCE, which included over 600 wells and data going back over 50 years, concluded that "the groundwater levels in Napa County are stable, except for portions of the MST district". Most wells elsewhere within the Napa Valley floor with a sufficient record indicate that groundwater levels are more affected by climatic conditions, are within historical levels, and seem to recover from dry periods during subsequent wet or normal periods. The LSCE Study also concluded that, on a regional scale, there appear to be no current groundwater quality issues except north of Calistoga (mostly naturally occurring boron and trace metals) and in the Carneros region (mostly salinity). The subject property is located within the Central Interior Valleys subarea of Napa County according to the Napa County Groundwater Monitoring Plan 2013. The County has no record of problems or complaints of diminished groundwater supplies at the project site or in the general vicinity. The applicant has not experienced any issues with the availability of groundwater.

The water source for the project site is one existing on-site well. Based on the capacity of the well drilled in 2015, the winery has elected to use the well and the proposed water storage tanks for all domestic and process water supply. The well yield report overseen by the County's Division of Environmental Health saw the well produce 1.6 gallons per minute (gpm). As the yield is less than 5 gpm, a water storage tank is required upstream of the service connection. This project is proposing three (3) storage tanks, one for domestic use, one for irrigation, and one for fire protection.

Minimum thresholds for water use have been established by the Department of Public Works using reports by the United States Geological Survey (USGS). These reports are the result of water resources investigations performed by the USGS in cooperation with the Napa County Flood Control and Water Conservation District. Any project which reduces water usage or any water usage which is at or below the established threshold is assumed not to have a significant effect on groundwater levels. The project is categorized as "all other areas" based upon current County Water Availability Analysis policies and therefore water use criteria is parcel specific based upon a Tier 1 water availability analysis. A Tier 1 analysis was completed by Bartelt Engineering in May 2017 which included a parcel specific recharge evaluation. According to the recharge evaluation, the parcel yields 16 afy during an average year and 9.4 afy in a dry year.

a/b The project would not violate any water quality standards or waste discharge requirements. A Wastewater Disposal Feasibility Study prepared by Bartelt Engineering was submitted showing the project site has adequate disposal capacity to serve the project. The Division of Environmental Health has reviewed this study and found it to meet County standards. The project proposes to bring in portable toilets to handle the excess number of guests during the events that have more than 30 guests. This will be hauled off-site and disposed of in a responsible manner.

The project is not expected to substantially deplete local groundwater supplies. The water source for the project is an existing well which was drilled in 2015 at a depth of 354 feet and has a 51 fiit annular seal with a recorded flow of 1.6 gallons per minute. The applicant submitted a Tier 1 Water Availability Analysis performed by Bartelt Engineering in May 2017 showing the projected water use for the project plus existing demand is 15.9 afy. The anticipated total overall water demand for the project site would be 15.9 afy, representing a 0.8 afy increase of the existing water demand of 15.1 afy.

Based on statistics taken from the PRISM Climate Group at Oregon State University, the average rainfall over a 10 year period is 34.7 inches per year. Using other studies as a baseline, it can be assumed that the groundwater recharge is 10% of the annual precipitation. 10% of the annual precipitation spread over the project parcel's 55.35 acres is 16.0 acre feet per year (afy). The current water usage on site is 15.1 afy for vineyard irrigation. The proposed winery would add an estimated additional usage of 0.8 afy, bringing the total estimated use of water to 15.9 afy. Because water availability is subject to fluctuations in annual precipitation totals, a 10,000 gallon domestic water storage tank, a 50,000 gallon fire storage tank, and a 100,000 gallon irrigation storage tank are proposed. The parcel water demand can be met with the existing project wells and the proposed water storage tanks below is a table that details each source of existing and proposed groundwater use:

Usage Type	Existing Usage	Proposed Usage
Vineyard Irrigation	15.1	15.1
Winery		
Wine production	0	0.65
Domestic	0	0.15
Landscape Irrigation	0	0
Frost Protection	0	0
Total Demand	15.1	15.9

The estimated groundwater demand of 15.9 afy represents an increase of 0.8 afy over the existing condition. Total water demand of 15.9 afy is less than the annual recharge of 16 afy during average rainfall years, and therefore the water demand should be met with the existing well and proposed water storage tanks. The winery, as part of its entitlement would include the County's standard condition of approval requiring well monitoring as well as the potential to modify/alter permitted uses on site should groundwater resources become insufficient to supply the use.

In response to regional drought and the general Statewide need to protect groundwater resources, the Governor enacted new legislation requiring local governments to monitor and management groundwater resources. Napa County's prior work on the Napa Valley Groundwater Management Plan provides a strong foundation for Napa County to comply with this State mandated monitoring and management objective. As a direct result, the project site is now subject to this new legislation requiring local agencies to monitor groundwater use. Assembly Bill - AB 1739 by Assembly member Roger Dickinson (D-Sacramento) and Senate Bills 1168 and 1319 by Senator Fran Pavley (D-Agoura Hills) establish a framework for sustainable, local groundwater management for the first time in California history. The legislation requires local agencies to tailor sustainable groundwater plans to their regional economic and environmental needs. The legislation prioritizes groundwater basin management Statewide, which includes the Napa Valley/Napa River Drainage Basin, and sets a timeline for implementation of the following:

By 2017, local groundwater management agencies must be identified;

By 2020, overdrafted groundwater basins must have sustainability plans;

By 2022, other high and medium priority basins not currently in overdraft must have sustainability plans; and

By 2040, all high and medium priority groundwater basins must achieve sustainability.

The State has classified the Napa River Drainage Basin as a medium priority resource. Additionally, the legislation provides measurable objectives and milestones to reach sustainability and a State role of limited intervention when local agencies are unable or unwilling to adopt sustainable management plans. Napa County supports this legislation and has begun the process of developing a local groundwater management agency which is anticipated to be in place and functioning within the timeline prescribed by the State.

The proposed project would result in a modest increase on the demand of ground water supplies and therefore would not interfere with groundwater recharge or lowering of the local groundwater level. A well interference analysis was conducted as part of the Tier I analysis to review the project's potential impacts on neighboring wells within 500 feet from the property wells. According to the 2017 Bartlet WAA, there are no neighboring wells within 500 feet of the project. The WAA guidelines establish a 10-foot drawdown as the criteria to determine significant adverse effects. Because the wells estimated drawdown is less than 10-feet, no significant drawdown impact is anticipated for wells on adjacent parcels, there is no anticipated significant impact to groundwater availability that would result from this project.

- c-d. The project would not substantially alter the drainage pattern on site or cause a significant increase in erosion or siltation on or off the project site. Impact would be less than significant.
- f. A review of all parcels within 500-feet of the subject site's property line was conducted to identify any potential hazardous spills and none were identified. Impacts from the project to water quality would be less than significant.
- g-j. The project is not within any know flood plains, dam, seiche, tsunami, or mudflow inundation areas

Mitigation Measures: None.

		Potentially Significant Impact	Less Than Significant With Mitigation Incorporation	Less Than Significant Impact	No Impact
a)	Physically divide an established community?				\boxtimes
b)	Conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the project (including, but not limited to the general plan, specific plan, local coastal program, or zoning ordinance) adopted for the	_	_	_	_
	purpose of avoiding or mitigating an environmental effect?				
c)	Conflict with any applicable habitat conservation plan or natural community conservation plan?				
Discussion:					

a-c. The project complies with the Napa County Code and all other applicable regulations. The subject parcel is located in the AW (Agricultural Watershed) zoning district, which allows wineries and uses accessory to wineries subject to use permit approval. The proposed project is compliant with the physical limitations of the Napa County Zoning Ordinance. The County has adopted the Winery Definition Ordinance (WDO) to protect agriculture and open space and to regulate winery development and expansion in a manner that avoids potential negative environmental effects.

Agricultural Preservation and Land Use Policy AG/LU-1 of the 2008 General Plan states that the County shall, "preserve existing agricultural land uses and plan for agriculture and related activities as the primary land uses in Napa County." The property's General Plan land use designation is AWOS (Agriculture, Watershed, and Open Space) and Agricultural Resource (AR), which allow "agriculture, processing of agricultural products, and single-family dwellings." More specifically, General Plan Agricultural Preservation and Land Use Policy AG/LU-2 recognizes wineries and other agricultural processing facilities, and any use clearly accessory to those facilities, as agriculture. The project would allow for the continuation of agriculture as a dominant land use within the county and is consistent with the Napa County General Plan.

The continued use of the property for the "fermenting and processing of grape juice into wine" (NCC §18.08.640) supports the economic viability of agriculture within the county consistent with General Plan Agricultural Preservation and Land Use Policy AG/LU-4 ("The County will reserve agricultural lands for agricultural use including lands used for grazing and watershed/ open space...") and General Plan Economic Development Policy E-1 (The County's economic development will focus on ensuring the continued viability of agriculture...).

The General Plan includes two policies requiring wineries to be designed generally of a high architectural quality for the site and its surroundings. There are no applicable habitat conservation plans or natural community conservation plans applicable to the property. No impacts would occur.

Mitigation Measures: None required.

XI.	MIN	NERAL RESOURCES. Would the project:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporation	Less Than Significant Impact	No Impact
	a)	Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?				\boxtimes
	b)	Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?				\boxtimes

Discussion:

a/b. Historically, the two most valuable mineral commodities in Napa County in economic terms have been mercury and mineral water. More recently, building stone and aggregate have become economically valuable. Mines and Mineral Deposits mapping included in the Napa County Baseline Data Report (*Mines and Mineral Deposits*, BDR Figure 2-2) indicates that there are no known mineral resources nor any locally important mineral resource recovery sites located on or near the project site. No impact would occur.

<u>Mitigation Measures</u>: None required.

XII.	NΟ	ISE. Would the project result in:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporation	Less Than Significant Impact	No Impact
ΛII.	NO	ISE. Would the project result in.				
	a)	Exposure of persons to or generation of noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?				
	b)	Exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels?				
	c)	A substantial permanent increase in ambient noise levels in the project vicinity above levels existing without the project?				
	d)	A substantial temporary or periodic increase in ambient noise levels in the project vicinity above levels existing without the project?				
	e)	For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?				
	f)	For a project within the vicinity of a private airstrip, would the project expose people residing or working in the project area to excessive noise levels?				\boxtimes

a/b. The project would result in a temporary increase in noise levels during construction of the new winery facility, caves, the improvements to the existing driveway connecting to Chiles Pope Valley Road, and the creation of parking stalls. Construction activities would be limited to daylight hours using properly muffled vehicles. Noise generated during this time is not anticipated to be significant. As such, the project would not result in potentially significant temporary construction noise impacts or operational impacts. Because the nearest residence to the project site is approximately 835 feet to the northeast of the proposed winery structures and operations, there is a low potential for impacts related to construction noise to result in a significant impact. Further, construction activities would occur during the period of 7am-7pm on weekdays, during normal hours of human activity. All construction activities would be conducted in compliance with the Napa County Noise Ordinance (Napa County Code Chapter 8.16). The proposed project would not result in long-term significant construction noise impacts. Conditions of approval identified below would require construction activities to be limited to daylight hours, vehicles to be muffled, and backup alarms adjusted to the lowest allowable levels. Impacts would be less than significant.

7.3. CONSTRUCTION NOISE

Construction noise shall be minimized to the greatest extent practical and feasible under State and local safety laws, consistent with construction noise levels permitted by the General Plan Community Character Element and the County Noise Ordinance. Construction equipment muffling and hours of operation shall be in compliance with the County Code. Equipment shall be shut down when not in use. Construction equipment shall normally be staged, loaded, and unloaded on the project site, if at all practicable. If project terrain or access road conditions require construction equipment to be staged, loaded, or unloaded off the project site (such as on a neighboring road or at the base of a hill), such activities shall only occur daily between the hours of 8 am to 5 pm.

c/d. The proposed project involves a marketing program including 17 events on an annual basis with the largest events permitting up to 125 guests. The winery will use a proposed outdoor patio for tastings and marketing events that has the potential to generate higher noise levels, compared to existing conditions, as a result of the proposed outdoor activities.

Additional regulations contained within County Code Chapter 8.16 establish exterior noise criteria for various land uses in the County. As described in the Project Setting, above, land uses that surround the proposed parcel are predominantly agricultural (vineyards) but include low density residential; of these land uses, the residential land use is considered the most sensitive to noise. Based on the standards in County Code section 8.16.070, noise levels, measured at the exterior of a residential structure or residential use on a portion of a larger property, may not exceed 50 decibels for more than half of any hour in the window of daytime hours (7:00 a.m. to 10:00 p.m.) within which the applicant proposes to conduct events. Noise impacts of the proposed project would be considered bothersome and potentially significant if sound generated by it had the effect of exceeding the standards in County Code more than 50 percent of the time (i.e., more than 50 decibels for more than 30 minutes in an hour for a residential use).

The nearest off-site residence to the proposed winery is approximately 835 feet to the northeast of the proposed winery structure. Under the proposed project, the largest outdoor event that would occur on the parcel would have an attendance of no more than 125 people, and all events would end by 10:00 p.m., with clean-up conducted afterwards. Winery operations would occur between 6:00 a.m. and 6:00 p.m.

(excluding harvest). Continuing enforcement of Napa County's Noise Ordinance by the Division of Environmental Health and the Napa County Sheriff, including the prohibition against amplified music, should further ensure that marketing events and other winery activities do not create a significant noise impact. Events and non-amplified music, including clean-up are required to finish by 10:00 p.m. Amplified music or sound systems would not be permitted for outdoor events as identified in standard Condition of Approval 4.10 below. Temporary events would be subject to County Code Chapter 5.36 which regulates proposed temporary events.

4.10 AMPLIFIED MUSIC

There shall be no amplified sound system or amplified music utilized outside of approved, enclosed, winery buildings.

The proposed project would not result in long-term significant permanent noise impacts.

e/f. The project site is not located within an airport land use plan or within two miles of a public airport or within the vicinity of a private airstrip. No impacts would occur.

Mitigation Measures: None required.

XIII.	POF	PULATION AND HOUSING. Would the project:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporation	Less Than Significant Impact	No Impact
	a)	Induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?			\boxtimes	
	b)	Displace substantial numbers of existing housing, necessitating the construction of replacement housing elsewhere?				\boxtimes
	c)	Displace substantial numbers of people, necessitating the construction of replacement housing elsewhere?				\boxtimes

Discussion:

a. Proposed staffing for the project includes up to a maximum of four (4) full-time employees and two (2) part-time employees as part of this project. The Association of Bay Area Governments' *Projections 2003* figures indicate that the total population of Napa County is projected to increase some 23% by the year 2030 (*Napa County Baseline Data Report*, November 30, 2005). Additionally, the County's *Baseline Data Report* indicates that total housing units currently programmed in county and municipal housing elements exceed ABAG growth projections by approximately 15%. The four (4) additional full-time employees and two (2) additional part-time employees which are part of this project could lead to minor population growth in Napa County. Relative to the County's projected low to moderate growth rate and overall adequate programmed housing supply that population growth does not rise to a level of environmental significance. In addition, the project would be subject to the County's housing impact mitigation fee, which provides funding to meet local housing needs.

Cumulative impacts related to population and housing balance were identified in the 2008 General Plan EIR. As set forth in Government Code §65580, the County of Napa must facilitate the improvement and development of housing to make adequate provision for the housing needs of all economic segments of the community. Similarly, CEQA recognizes the importance of balancing the prevention of environment damage with the provision of a "decent home and satisfying living environment for every Californian." (See Public Resources Code §21000(g).) The 2008 General Plan sets forth the County's long-range plan for meeting regional housing needs, during the present and future housing cycles, while balancing environmental, economic, and fiscal factors and community goals. The policies and programs identified in the General Plan Housing Element function, in combination with the County's housing impact mitigation fee, to ensure adequate cumulative volume and diversity of housing. Cumulative impacts on the local and regional population and housing balance would be less than significant

b/c. This application would not displace a substantial volume of existing housing or a substantial number of people and would not necessitate the construction of replacement housing elsewhere. No impacts would occur.

Mitigation Measures: None required.

f)	Conflict with General Plan Policy CIR-23, which requires new uses to meet their anticipated parking demand, but to avoid providing excess parking which could stimulate unnecessary vehicle trips or activity exceeding the site's capacity?			\boxtimes	
g)	Conflict with adopted policies, plans, or programs regarding public transit, bicycle, or pedestrian facilities, or otherwise decrease the performance or safety of such facilities?				

- a/b. Currently, Chiles Pope Valley Road has a LOS rating of C. On a typical weekday, the project is expected to generate an additional 28.5 total trips, in which 8 trips occur during the PM peak hours, 4:00 6:00 PM. On a typical Saturday, the project is expected to generate 26 total trips, 10 of which would occur during the peak PM hours, 12:00 PM 2:00 PM. These numbers come from the County's standard Winery Trip Generation worksheet, but the practical numbers may be less, as the winery intends to use the grapes grown on site, which currently are hauled offsite, as the main source of grapes for the winery. Additional grapes could potentially be hauled in from adjacent parcels and nearby parcels. During construction, all spoils will be used for on-site improvements and not hauled away. Because of the project's remote location, the low levels of proposed visitation, and the amount of wine to be produced, the Department of Public Works does not anticipate that any significant impact will occur per county standards.
- c. No air traffic is proposed and there are no new structures proposed for this project that would interfere with or require alteration of air traffic patterns. No impact would occur.
- d-f. After implementation of the proposed project, the site would be accessed via an existing driveway on Chiles Pope Valley Road. It is proposed to have improvements that will bring it up to County Road and Streets Standards. This allows for adequate access for emergency vehicles and a design that has no substantial hazards.

Based on the existing traffic volumes on Chiles Pope Valley Road and expected daily volumes at the project driveway, a left turn lane is not required at the existing project driveway per the County's standard left turn lane warrant.

The proposal includes the construction of eight (8) parking spaces and one (1) loading area. Based upon the County standard of 2.6 persons per vehicle during weekends and 1.05 persons per vehicle for employees the minimum parking required for daily activities would be eight (8). However, it is unlikely that the winery would host 18 visitors at one time on a weekend. Additional parking for the proposed marketing events would occur in the vineyard avenues.

Mitigation Measures: None required.

a-b. The project would not exceed wastewater treatment requirements of the Regional Water Quality Control Board and would not result in a significant impact on the environment relative to wastewater discharge. Wastewater disposal would be accommodated on-site and in compliance with State and County regulations. According to the Wastewater Disposal Feasibility Study prepared by Bartelt Engineering in October 2017, the project site and proposed system has adequate disposal capacity to serve the project. The Division of Environmental

Health reviewed this report and concurred with its findings.

Discussion:

Water sources for the project site consist of one on-site wells, and a natural spring. Based on the capacity of the new well drilled in 2014, the winery has elected to use the well and the spring for all domestic and process water supply. The well yield report overseen by the County's Division of Environmental Health saw the well produce 1.6 gallons per minute (gpm). As the yield is less than 5 gpm, a water storage tank is required upstream of the service connection. This project is proposing three (3) storage tanks, one for domestic use, one for irrigation, and one for fire protection. The applicant submitted a Tier 1 Water Availability Analysis (WAA) completed by Bartelt Engineering in May 2017 showing the projected water use for the project plus existing demand is 15.9 afy. As discussed in **Section IX** above, the estimated groundwater recharge for this parcel is 16 afy. This project is not expected to have a significant impact.

- c. The preliminary grading and drainage plan has been reviewed by the Engineering Division. As conditioned, impacts would be less than significant.
- d. As discussed in **Section IX** above, a Tier 1 analysis was completed by Bartelt Engineering in May 2017 which included a parcel specific recharge evaluation. According to the recharge evaluation, the project is expected to use 15.9 afy while its recharge is 16 afy. The parcel water demand can be met with the existing on site well. In summary, the existing yield would be sufficient to serve all uses on the property. Impacts would be less than significant as there is sufficient water supply available to serve the proposed project.
- e. Wastewater will be treated on-site and will not require a wastewater treatment provider. As such, impacts would be less than significant.
- f. The project would be served by Keller Canyon Landfill which has a capacity which exceeds current demand. As of January 2004, the Keller Canyon Landfill had 64.8 million cubic yards of remaining capacity and has enough permitted capacity to receive solid waste though 2030. Impacts would be less than significant.
- g. The project would comply with federal, state, and local statutes and regulations related to solid waste. Impacts would be less than significant.

Mitigation Measures: None required.

XIX.	MA	NDATORY FINDINGS OF SIGNIFICANCE	Potentially Significant Impact	Less Than Significant With Mitigation Incorporation	Less Than Significant Impact	No Impact
	a)	Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?			\boxtimes	
	b)	Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?			\boxtimes	
	c)	Does the project have environmental effects that will cause substantial adverse effects on human beings, either directly or indirectly?			\boxtimes	

Discussion:

- a. As identified in Section V above, a Cultural Resource Evaluation was prepared for the site. No historic or prehistoric resources are anticipated to be affected by the proposed project nor will the proposed project eliminate important examples of the major periods of California history or prehistory. In the event archaeological artifacts are found, a standard condition of approval would be incorporated into the project. Impacts would be less than significant.
- b. The project does not have impacts that are individually limited, but cumulatively considerable. Potential air quality, greenhouse gas emissions, and traffic impacts are discussed in the respective sections above. The analysis determined that all potential impacts were less than significant and would not contribute significantly to cumulative impacts.

The project does not have impacts that are individually limited, but cumulatively considerable. Potential air quality, greenhouse gas emissions, and traffic impacts are discussed in the respective sections above. The analysis determined that all potential impacts were less than significant and would not contribute significantly to cumulative impacts.

The potential impact from an increase in air pollution and greenhouse gases are being addressed as discussed in the project's Greenhouse Gas Voluntary Best Management Practices including but not limited to generation of on-site renewable energy; vehicle miles traveled reduction plan including employee incentives, employee carpool or vanpool, bike riding incentives, and bus transportation for large marketing events; solar hot water heating; energy conserving lighting; and use of recycled materials. Additional items are included in the Voluntary Best Management Practices Checklist for Development Projects form included with the Use Permit Application.

Traffic generation was calculated from winery operations, where the calculated trips reflect on-site employees, visitation, and wine production. Under the Napa County General Plan, traffic volumes are projected to increase and will be caused by a combination of locally generated traffic as well as general regional growth. The General Plan EIR indicates that much of the forecasted increase in traffic on the arterial roadway network will result from traffic generated outside of the County; however the project will contribute a small amount toward the general overall increase. General Plan Policy CIR-16 states that "The County will seek to maintain an arterial Level of Service D or better on all County roadways, except where the level of Service already exceeds this standard and where increased intersection capacity is not feasible without substantial additional right of way." The location of the winery, combined with the limited number of potential trips attributed to the limited scope of the proposed project, would keep Chiles Pope Valley Road operating at LOS C.

The project does not propose new development that would have a significant impact on the environment or substantially change the existing conditions. With the imposition of standard and project specific conditions of approval, the project does not have impacts that are individually limited, but cumulatively considerable.

c. All impacts identified in this Initial Study are less than significant and do not require mitigation. Therefore, the proposed project would not result in environmental effects that cause substantial adverse effects on human beings either directly or indirectly. Impacts would be less than significant.

Mitigation Measures: None Required.
