RE: Bergman Winery Permit  
Section 22 T8N, R6W, MDB&M - Napa County

Scott,

This is an assessment for northern spotted owls (*strix occidentalis caurinia*), or NSOs, for the Bergman Winery Project located at 3285 St. Helena Highway North near St. Helena, California. The Project proposes to build a winery. A northern spotted owl assessment was completed in January of 2016; however, the project has since been altered, therefore, this is an updated review. The Project now proposes to remove 4 conifer trees and approximately 24 deciduous trees.

**Known Northern Spotted Owl Territories:**

According to the California Department of Fish & Wildlife's spotted owl viewer dated 17MAY18, there is one known northern spotted owl territory within 1.3 miles of the Project (Attachment #1). An assessment area of 1.3 miles from the project area was used (Attachment #2). The 1.3 mile assessment area was created by USFWS for a Take Avoidance of northern spotted owls within the California Interior (outside the redwood zone). Although Napa County does have redwoods, the environmental conditions in the area are hotter/drier than the coastal redwood zone; therefore, the 1.3 mile assessment area was used for this Project. A summary of the report includes:

Owls Sites Found (there is one known NSO territory within 1.3 miles of the Project Area):

- NAP005 – Northern Spotted Owl Territory is located approximately 2,570' (within ½ mile) from the Project Area. This territory is based upon a pair of NSOs located with 1 young in 1989. The territory was found active in 1987, 1989, 1990, 1991, and 1998. Surveys in 2000 and 2002 did not detect any NSOs.

**Northern Spotted Owl Habitat:**

The attributes for northern spotted owl habitat includes a forest with:

- Dense, multi-layered canopy of several tree species.
- Trees of varying sizes and ages.
- Abundant logs, snags/cavity trees, and trees with broken tops or platform-like substrates (i.e. broken tops, mistletoe, debris piles, or old raptor/squirrel nests).
- Open spaces among lower branches to allow flight under the canopy.

USFWS more specifically defines northern spotted owl habitat within the California Interior as follows:

- High Quality Nesting/Roosting Habitat: Mixed tree species with basal area of 210+ ft<sup>2</sup> and  $\geq$  15" quadratic mean diameter, and  $\geq$  8 trees per acre of trees  $\geq$  26" in diameter at breast height, and  $\geq$  60% canopy closure.
- Suitable Nesting/Roosting Habitat: Mixed tree species with basal area ranging from 150 - 180+ ft<sup>2</sup> and  $\geq$  15" quadratic mean diameter, and  $\geq$  8 trees per acre of trees  $\geq$  26" in diameter at breast height, and  $\geq$  60% canopy closure.
- Suitable Foraging Habitat: Mixed tree species with basal area ranging from 120 - 180+ ft<sup>2</sup> and  $\geq$  13" quadratic mean diameter, and  $\geq$  5 trees per acre of trees  $\geq$  26" in diameter at breast height, and a mix of  $\geq$  40% to 100% canopy closure.
- Low Quality Foraging Habitat: Mixed tree species with basal area ranging from 80 - 120+ ft<sup>2</sup> and  $\geq$  11" quadratic mean diameter, and  $\geq$  40% canopy closure.

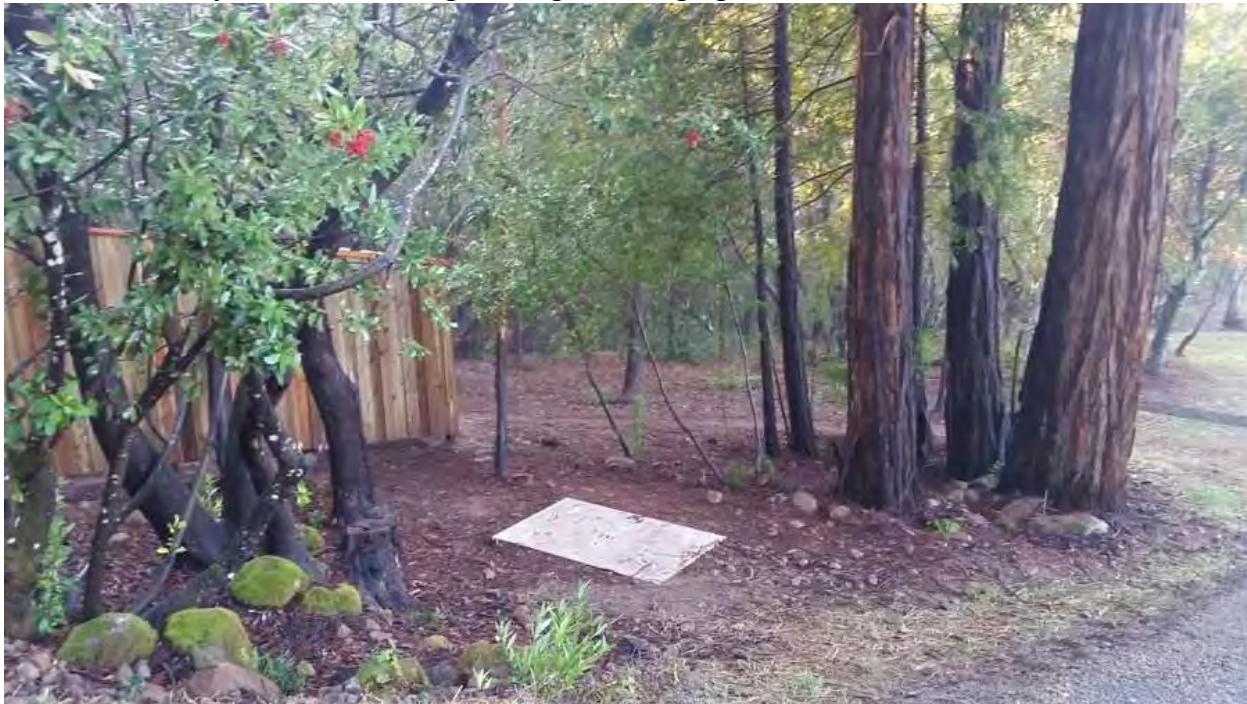

#### **Project Area:**

The Project Area is on the edge of an existing vineyard and mixed second-growth forest (Attachment #3). The overstory vegetation includes Douglas-fir, pine, redwood, madrone, and oaks. The trees to be removed occur along the edge of the forest and existing vineyard and driveway.

Existing vineyard and forest edge:

View of the area adjacent to flat along the edge of foraging habitat

View of flat area where winery building will occur

Foraging Habitat near the Project Area

The building location of the winery is within unsuitable northern spotted owl habitat due to lack of trees and existing vineyard; however, the trees to be removed do occur along the edge of suitable marginal foraging habitat. In addition, there is suitable northern spotted owl habitat within  $\frac{1}{4}$  mile of the Project Area. To prevent disturbance to potential northern spotted owls, seasonal restrictions apply unless protocol surveys within the habitat is completed.

## **Conclusions for Bergman Winery Project:**

The closest known northern spotted owl territory is located 2,570' from the Project Area. The removal of a few trees along the edge of the forest will not change the northern spotted owl habitat in the area; however, seasonal restrictions are required to prevent potential disturbance to owls.

**The seasonal restrictions to prevent potential disturbance to owls includes no cutting trees between 01FEB – 09JUL unless protocol level surveys are completed within the suitable habitat within 1.4 miles of the Project Area.**

This is a general assessment of northern spotted owls for the above listed project area. This is not a complete Biological Assessment for all listed species for an EIR/EIA, nor can it be used in place of USFWS Protocol Surveys.

If you have questions regarding this information, please feel free to contact me.

Gone Hooting,

*Pamela Town*
